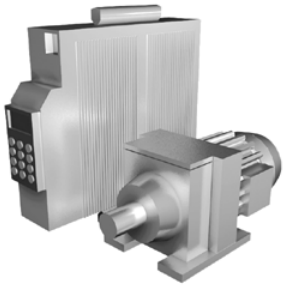
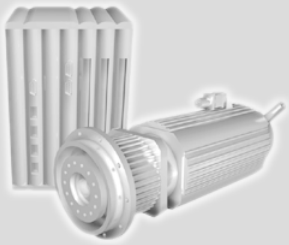
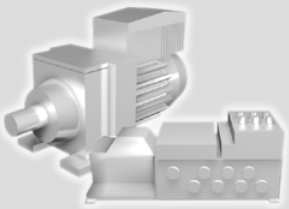
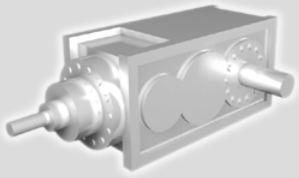
SEW EURODRIVE







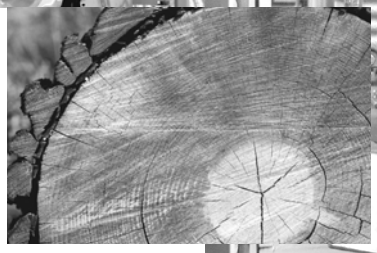


MOVIDRIVE® *compact*
MCF/MCV/MCS4_A

Edition 11/2006

11535016 / EN

Operating Instructions



SEW EURODRIVE

1 Structure of the Safety Notes

The safety notes in these operating instructions are designed as follows:

Pictogram	SIGNAL WORD!
	Type and source of danger. Possible consequence(s) if the safety notes are disregarded. • Measure(s) to prevent the danger.

Pictogram	Signal word	Meaning	Consequences in case of disregard
Example:  General danger  Specific danger, e.g. electric shock	**DANGER!**	Imminent danger	Severe or fatal injuries
	WARNING!	Possible dangerous situation	Severe or fatal injuries
	CAUTION!	Possible dangerous situation	Minor injuries
	**STOP!**	Possible damage to property	Damage to the drive system or its environment
	**NOTE**	Useful information or a tip Simplifies the handling of the drive system	

	CAUTION!
	**A requirement of fault-free operation** and fulfillment of any rights to claim under limited warranty is that you adhere to the information in the **operating instructions**. Therefore, **read the operating instructions** before you start operating the unit! Make sure that the operating instructions are available to persons responsible for the plant and its operation, as well as to persons who work independently on the unit. You must also ensure that the documentation is legible.

Exclusion of liability:

You must comply with the information contained in these operating instructions to ensure safe operation of the MOVIDRIVE® *compact* drive inverters and to achieve the specified product characteristics and performance requirements. SEW-EURODRIVE assumes no liability for injury to persons or damage to equipment or property resulting from non-observance of these operating instructions. In such cases, any liability for defects is excluded.

2 Safety Notes

The following basic safety notes must be read carefully to prevent injury to persons and damage to property. The operator must make sure that the basic safety notes are read and observed. Make sure that persons responsible for the plant and its operation, as well as persons who work independently on the unit, have read through the operating instructions carefully and understood them. If you are unclear about any of the information in this documentation, or if you require further information, please contact SEW-EURODRIVE.

2.1 General information

Never install damaged products or take them into operation. Submit a complaint to the shipping company immediately in the event of damage.

During operation, drive inverters can have live, bare and movable or rotating parts as well as hot surfaces, depending on their enclosure.

Removing covers without authorization, improper use or incorrect installation and operation may result in severe injuries to persons or damage to machinery.

Consult the documentation for additional information.

2.2 Target group

Only qualified personnel are authorized to install, start up, repair or service the units (observe IEC 60364 or CENELEC HD 384 or DIN VDE 0100 and IEC 60664 or DIN VDE 0110 as well as national accident prevention guidelines).

Qualified personnel in the context of these basic safety notes are: all persons familiar with installation, assembly, startup and operation of the product who possess the necessary qualifications.

All persons involved in any other work, such as transportation, storage, operation and disposal, must have suitable training.

2.3 Designated use

Drive inverters are components intended for installation in electrical systems or machines.

In case of installation in machines, startup of the drive inverters (i.e. start of designated operation) is prohibited until it is determined that the machine meets the requirements stipulated in the EC Directive 98/37/ EC (machine guideline); observe EN 60204.

Startup (i.e. start of designated operation) is only permitted with adherence to EMC (89/336/EEC) guideline.

The drive inverters meet the requirements stipulated in low voltage guideline 73/23/EEC. The harmonized standards of the EN 61800-5-1/DIN VDE T105 series in connection with EN 60439-1/VDE 0660 part 500 and EN 60146/VDE 0558 are applied to these drive inverters.

Technical data and information on the connection requirements are given on the nameplate and in the documentation; they have to be observed under all circumstances.

Safety functions

The MOVIDRIVE® *compact* drive inverters may not perform safety functions without higher-level safety systems. Use higher-level safety systems to ensure protection of personnel and equipment.

2.4 Transportation, putting into storage

Observe the notes on transportation, storage and proper handling. Observe the climatic conditions as stated in the section "General technical data."

2.5 Installation

Installation and cooling of the devices must take place according to the guidelines listed in the corresponding documentation.

Protect the drive inverters from excessive strain. Especially during transportation and handling, do not allow the components to be deformed or insulation spaces altered. Avoid contact with electronic components and contacts.

Drive inverters contain components that can be damaged by electrostatic energy and improper handling. Prevent mechanical damage or destruction of electric components (may pose health risk!)

The following applications are prohibited unless measures are expressly taken to make them possible:

- Use in potentially explosive atmospheres
- Use in areas exposed to harmful oils, acids, gases, vapors, dust, radiation, etc.
- Use in non-stationary applications that are subject to mechanical vibration and shock loads in excess of the requirements in EN 50178

2.6 Electrical connection

Observe the applicable national accident prevention guidelines when working on live drive inverters (e.g. BGV A3).

Perform electrical installation according to the pertinent regulations (e.g. line cross sections, fusing, protective conductor connection). For any additional information, refer to the applicable documentation.

You will find notes on EMC-compliant installation, such as shielding, grounding, arrangement of filters and routing of lines, in the documentation of the drive inverters. Always observe these notes even with drive inverters bearing the CE marking. The manufacturer of the system or machine is responsible for maintaining the limits established by the EMC legislation.

Preventive measures and protection devices must correspond to the regulations in force (e.g. EN 60204 or EN 61800-5-1).

Required preventive measures: Ground the unit.

2.7 Safe disconnection

The unit meets all requirements for safe disconnection of power and electronic connections in accordance with EN 61800-5-1. All connected circuits must also satisfy the requirements for safe disconnection.

2.8 Operation

Systems with integrated drive inverters must be equipped with additional monitoring and protection devices, if necessary, according to the applicable safety guidelines, such as the law governing technical equipment, accident prevention regulations, etc. Changes to the drive inverter using the operating software are permitted.

Do not touch live components or power connections immediately after disconnecting the drive inverters from the supply voltage because there may still be some charged capacitors. Note the respective reference plates on the drive inverter.

Keep all covers and doors closed during operation.

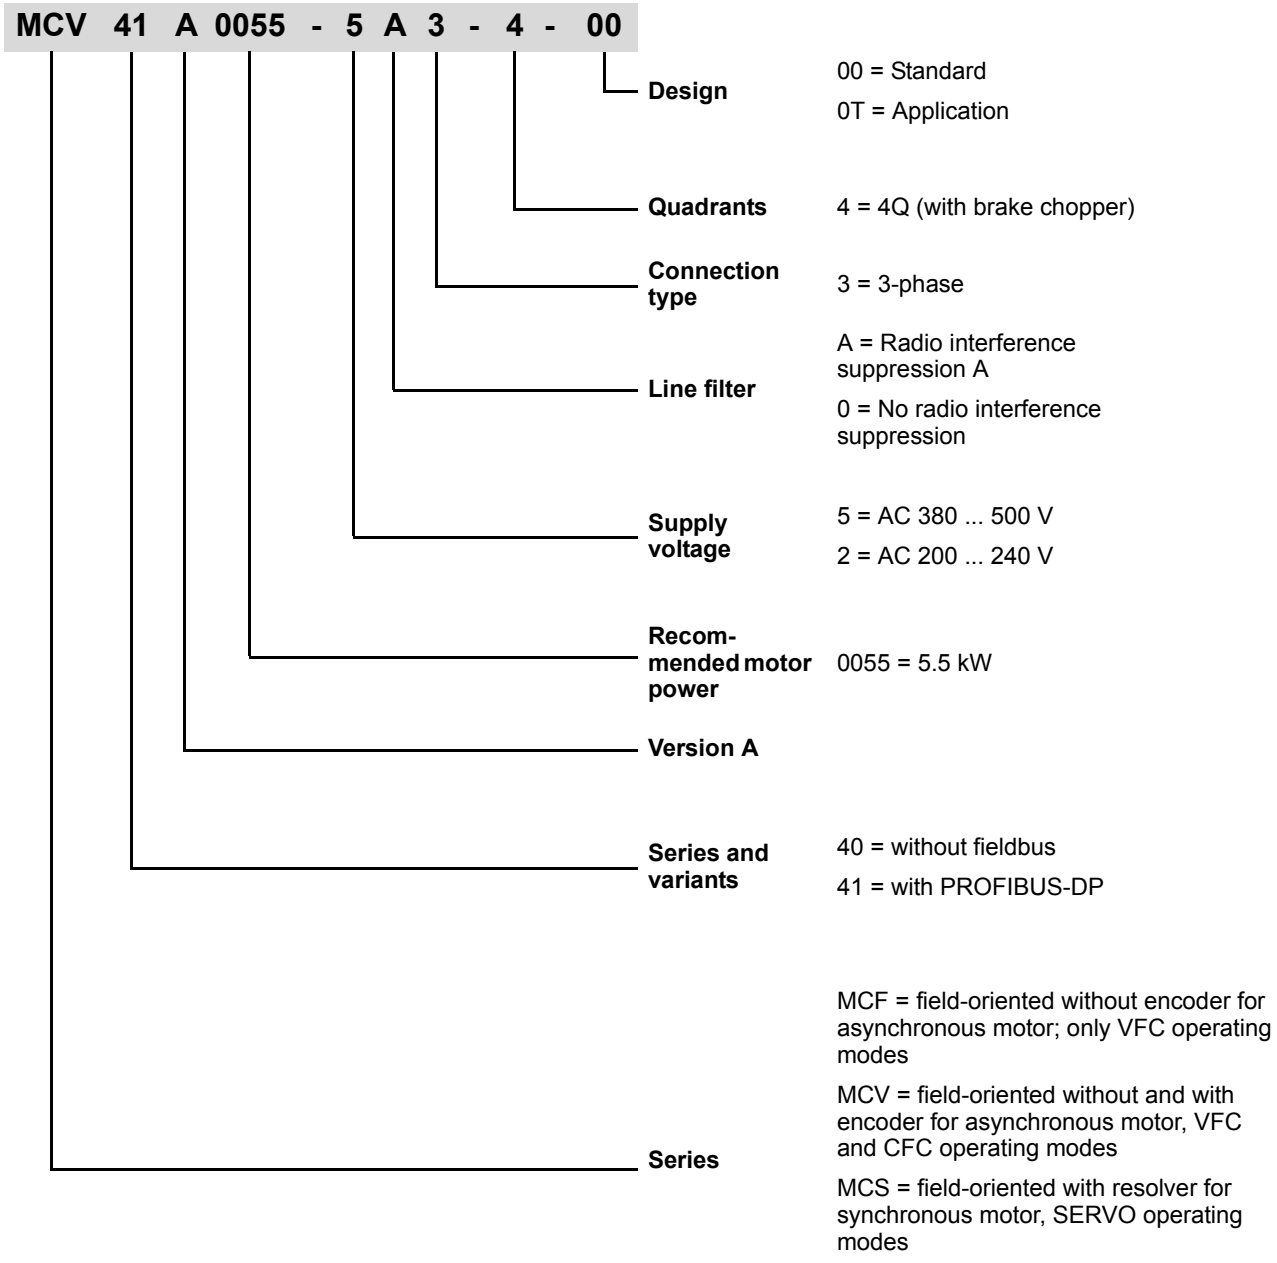
The fact that the status LED and other display elements are no longer illuminated does not indicate that the unit has been disconnected from the power supply and no longer carries any voltage.

Mechanical blocking or internal safety functions of the unit can cause a motor standstill. Removing the cause of the problem or performing a reset can result in the drive re-starting on its own. If, for safety reasons, this is not permitted for the driven machine, disconnect the unit from the mains before correcting the fault.

3 Unit Design

3.1 Unit designation, nameplates and scope of delivery

Sample unit designation



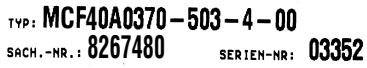
Sample nameplate

The complete nameplate is attached to the side of the unit.

01318AXX

Figure 1: Complete nameplate

A type label is attached to the front of the control unit (above the TERMINAL slot).



01322AXX

Figure 2: Type label

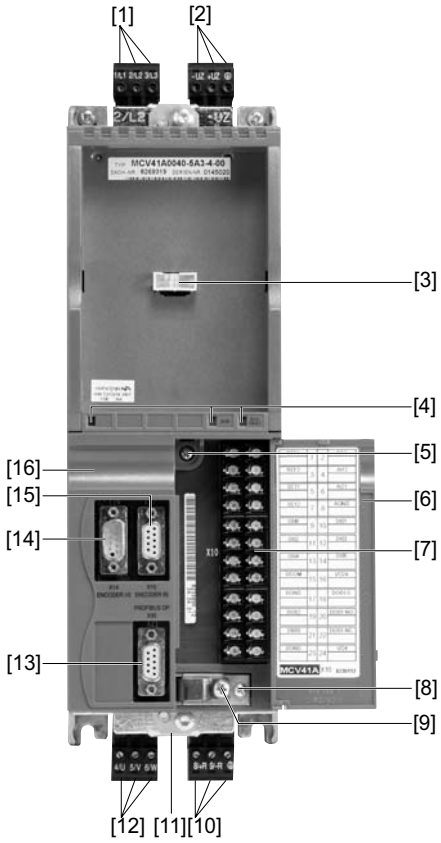
Scope of delivery

- Additionally for size 1: Connector housing for the power terminals (X1 ... X4), connected
- Additionally for sizes 1 and 2: Shield clamp for power section
- Additionally for sizes 4 and 5: Touch guard for power terminals.

3.2 Size 1 MCF/MCV/MCS4_A

MCF/MCV/MCS4_A...-5A3 (AC 400/500 V units): 0015 ... 0040

MCF/MCV/MCS4_A...-2A3 (AC 230 V units): 0015 ... 0037



60117AXX

[1] X1: Power supply connection 1/L1, 2/L2, 3/L3, separable

[2] X4: Connection for DC link connection $-U_Z/+U_Z$ and PE connection, separable

[3] TERMINAL: Slot for DBG keypad or USS21A/USB11A option

[4] V1: Operation LED and PROFIBUS diagnostic LEDs (only with MCF/MCV/MCS41A)

[5] Retaining screw A for connection unit

[6] Panel on connection unit with label

[7] X10: Electronics terminal strip

[8] Retaining screw B for connection unit

[9] Screw of the shield clamp for the control unit

[10] X3: Braking resistor connection 8/+R, 9/–R and PE connection, separable

[11] Connection for shield clamp of the power section (not visible)

[12] X2: Motor connection 4/U, 5/V, 6/W

[13] Only for MCV/MCS41A X30: PROFIBUS-DP connection (9-pole Sub-D socket)

[14] Only for MCV/MCS4_A X14: Incremental encoder simulation output or external encoder input (9-pole Sub-D socket)

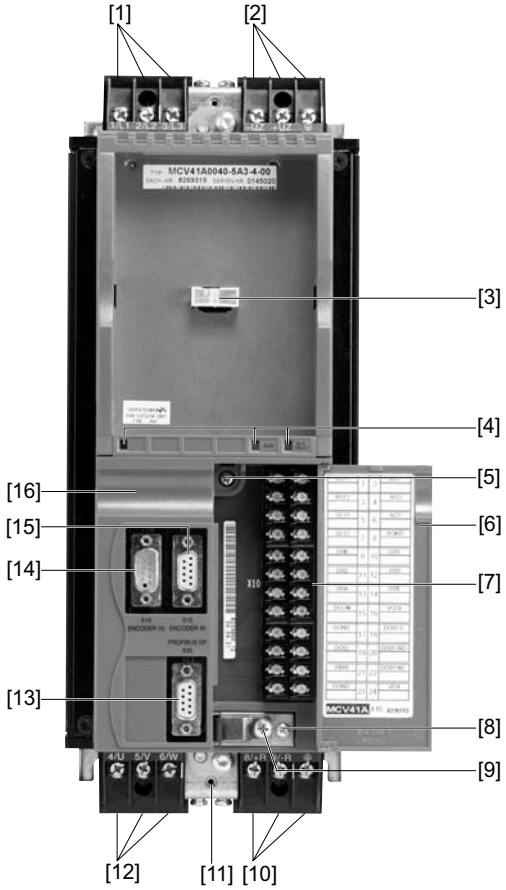
[15] Only for MCV/MCS4_A X15: Motor encoder input (9-pole Sub-D socket)

[16] Connection unit, removable

3.3 Size 2 MCF/MCV/MCS4_A

MCF/MCV/MCS4_A...-5A3 (AC 400/500 V units): 0055 ... 0110

MCF/MCV/MCS4_A...-2A3 (AC 230 V units): 0055 / 0075



60118AXX

[1] X1: Power supply connection 1/L1, 2/L2, 3/L3

[2] X4: Connection for DC link connection $–U_Z$/$+U_Z$ and PE connection, separable

[3] TERMINAL: Slot for DBG keypad or USS21A/USB11A option

[4] V1: Operation LED and PROFIBUS diagnostic LEDs (only with MCF/MCV/MCS41A)

[5] Retaining screw A for connection unit

[6] Panel on connection unit with label

[7] X10: Electronics terminal strip

[8] Retaining screw B for connection unit

[9] Screw of the shield clamp for the control unit

[10] X3: Braking resistor connection 8/+R, 9/–R and PE connection, separable

[11] Connection for shield clamp of the power section (not visible)

[12] X2: Motor connection 4/U, 5/V, 6/W

[13] Only for MCV/MCS41A X30: PROFIBUS-DP connection (9-pole Sub-D socket)

[14] Only for MCV/MCS4_A X14: Incremental encoder simulation output or external encoder input (9-pole Sub-D socket)

[15] Only for MCV/MCS4_A X15: Motor encoder input (9-pole Sub-D socket)

[16] Connection unit, removable

3.4 Size 3 MCF/MCV/MCS4_A

MCF/MCV/MCS4_A...-503 (AC 400/500 V units): 0150 ... 0300
MCF/MCV/MS4_A...-203 (AC 230 V units): 0110 / 0150

[14] Only for MCV/MCS4_A X14: Incremental encoder simulation output or external encoder input (9-pole Sub-D socket)

[15] Only for MCV/MCS4_A X15: Motor encoder input (9-pole Sub-D socket)

[16] Connection unit, removable

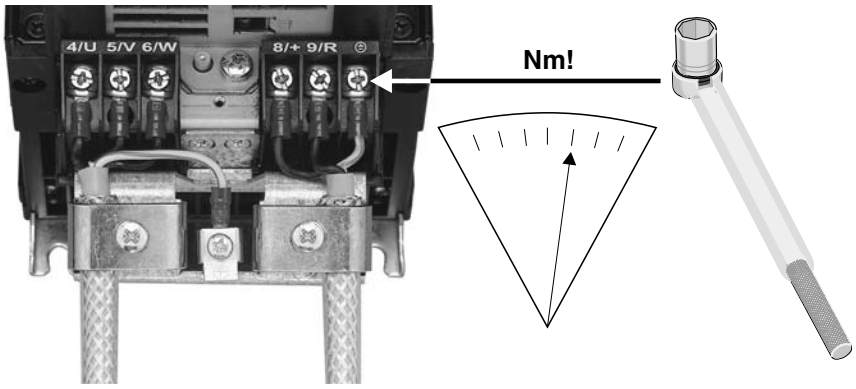
4 Installation

4.1 Installation instructions for the basic unit

Tightening torques

- Only use **genuine connection elements**. Note the **permitted tightening torques** for MOVIDRIVE® power terminals.
  - Size 1 → 0.6 Nm
  - Size 2 → 1.5 Nm
  - Size 3 → 3.5 Nm
  - Sizes 4 and 5 → 14 Nm



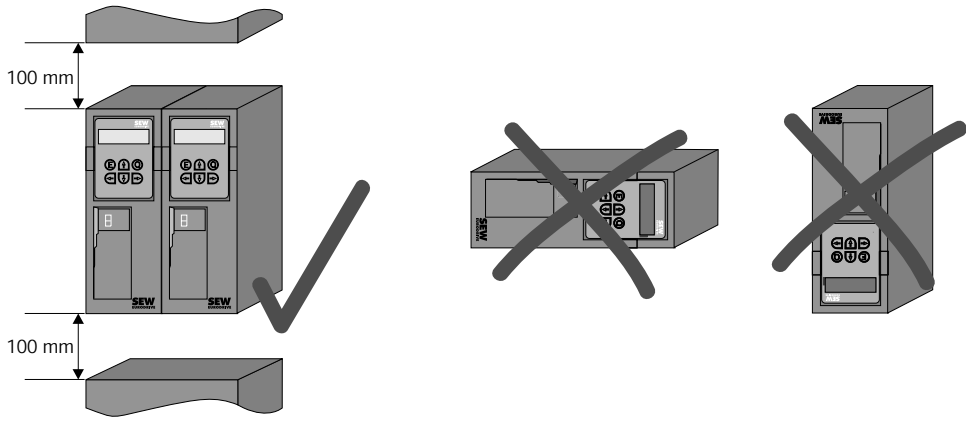
59847AXX

Figure 3: Observe the tightening torques

- The **permitted tightening torque** of the **signal terminals** is 0.6 Nm.

Minimum clearance and mounting position

- Leave **100 mm clearance at the top and bottom** for optimum cooling. There is no need for clearance at the sides. You can line up the units directly next to one another. With sizes 4 and 5 do not install any components that are sensitive to high temperatures within 300 mm of the top of the unit. Only install the units **vertically**. You must not install them horizontally, tilted or upside down.



60136AXX

Figure 4: Minimum clearance and mounting position of the units

Separate cable ducts

- Route **power cables** and **electronics cables** in **separate cable ducts**.

Fuses and earth-leakage circuit breakers

- Install the **fuses at the beginning of the supply system lead** after the supply bus junction (→ Wiring diagram for basic unit, power section and brake).
- SEW-EURODRIVE recommends that you do not use earth-leakage circuit breakers. However, if an earth-leakage circuit breaker is stipulated for direct or indirect protection against contact, observe the **following information in accordance with EN 61800-5-1:**

⚠ WARNING!

Incorrect earth-leakage circuit breaker installed.

Severe or fatal injuries.

MOVIDRIVE® can cause direct current in the protective earth. In cases where an earth-leakage circuit breaker is used for protection against direct or indirect contact, only install a **type B earth-leakage circuit breaker on the power supply end of the MOVIDRIVE® unit**.

Mains and brake contactors

- Only use **contactors in utilization category AC-3** (IEC 60947-4-1) as mains and brake contactors.

NOTES

- Only use the **mains contactor K11** (→ Sec. "Wiring diagram for basic unit") to **switch the inverter on and off**. Do not use it for jog mode. Use the commands "Enable/Stop", "CW/Stop" or "CCW/Stop" for jog mode.
- Observe a minimum switch-off time of 10 s for the input contactor K11.

More than four units

- With **more than four units** on an **input contactor** configured for the total current: Insert a **3-phase line choke in the circuit** to limit the inrush current.

PE power supply connection (→ EN 61800-5-1)

- For a **supply system lead < 10 mm^2**: Route a **second PE conductor with the cross section of the supply system lead** parallel to the protective earth via separate terminals or use a **copper protective earth conductor with a cross section of 10 mm^2**.
- For a **supply system lead 10 mm^2 ... 16 mm^2**: Route a **copper protective earth conductor with the cross section of the power supply line**.
- For a **supply system lead 16 mm^2 ... 35 mm^2**: Route a **copper protective earth conductor with the cross section of 16 mm^2**.
- For a **supply system lead > 35 mm^2**: Route a **copper protective earth conductor with half the cross section of the power supply line**.

IT systems

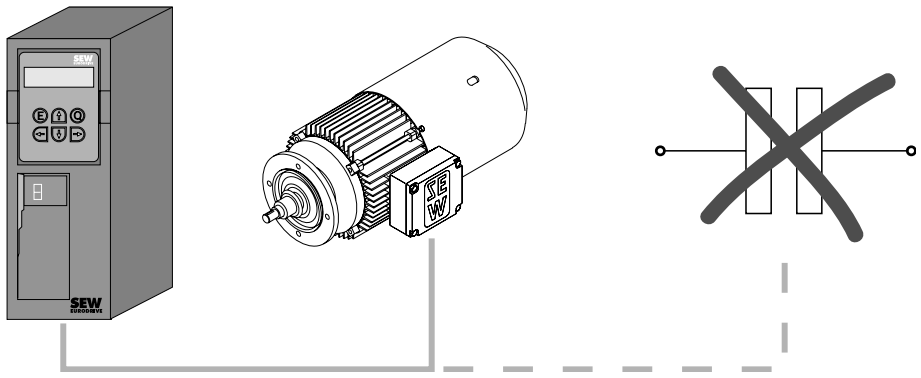
- SEW-EURODRIVE recommends using **earth-leakage monitors with pulse-code measurement** for voltage supply systems with a non-grounded star point (**IT systems**). Using such devices prevents the earth-leakage monitor mis-tripping due to the ground capacitance of the inverter. **No EMC limits are specified for interference emission** in **voltage supply systems without grounded star point** (IT systems).

Cross sections

- Supply system lead: **Cross section according to rated input current** I_{mains} at rated load.
- Motor lead: **Cross section according to rated output current** I_{rated}.
- Electronics cables for MCF/MCV/MCS:
  - For single cores 0.20...2.5 mm^2 (AWG 24...12)
  - For double cores 0.20...1 mm^2 (AWG 24...17)

Unit output

STOP	**STOP!** MOVIDRIVE® can suffer irreparable damage if you connect capacitive loads. • **Only connect ohmic/inductive loads (motors).** • Never connect capacitive loads.



60135AXX

Figure 5: Only connect ohmic/inductive loads; do not connect capacitive loads

Connecting braking resistors

- Use **two tightly twisted leads or a 2-core shielded power cable**. Cross section according to the rated output current of the inverter.
- Protect the braking resistor with a **bimetallic relay / thermal overload relay** (→ Wiring diagram for basic unit, power section and brake). Set the **trip current** according to the **technical data of the braking resistor**. SEW-EURODRIVE recommends using an overcurrent relay of trip class 10 or 10A in accordance with EN 60947-4-1.
- For braking resistors of the **BW...-T / BW...-P** series, the **integrated temperature switch/overcurrent relay can be connected using a 2-core shielded cable** as an **alternative** to a bimetallic relay.
- Install the **flat-type braking resistors** together with the appropriate **touch guard**.

Installing braking resistors BW... / BW..-T / BW...-P

- Permitted mounting options:
  - on horizontal surfaces
  - on vertical surfaces with brackets at the bottom and perforated sheets at top and bottom
- Mounting not permitted:
  - on vertical surfaces with brackets at the top, right or left

Operating braking resistors

- The connection leads to the braking resistors carry a **high pulsed DC voltage** during rated operation.

⚠ WARNING!

The surfaces of the braking resistors get very hot when the braking resistors are loaded with P_{rated}.

Risk of burns and fire.

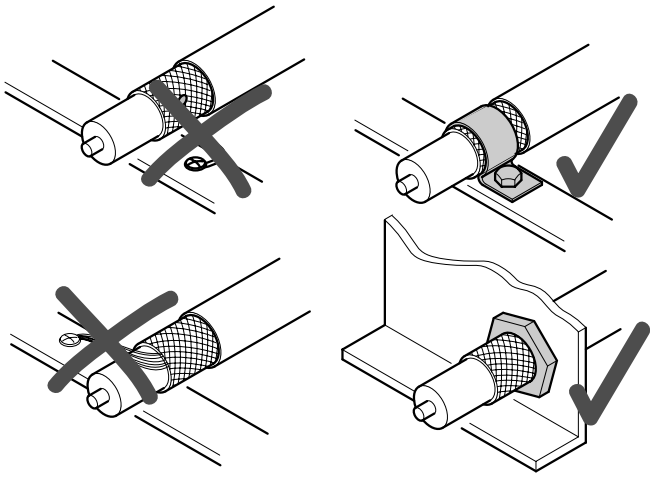
- Choose a suitable installation location. Braking resistors are usually installed on top of the control cabinet.
- Do not touch the braking resistors.

Binary inputs / binary outputs

- The **binary inputs** are electrically **isolated** by optocouplers.
- The **binary outputs** are **short-circuit proof** and **protected against external voltage to DC 30 V.** External voltages > DC 30 V can cause irreparable damage to binary outputs.

EMC compliant installation

- Only use **shielded control cables**.
- All cables except for the supply system lead must be **shielded**. As an alternative to shielding, the HD.. output choke option can be used for the motor cable to achieve the emitted interference limit values.
- When using shielded motor cables, e.g. prefabricated motor cables from SEW-EURODRIVE, you must keep the **unshielded conductors between the shield and connection terminal of the inverter as short as possible**.
- Apply the **shield by the shortest possible route and make sure it is grounded over a wide area at both ends**. Ground one end of the shield via a suppression capacitor (220 nF / 50 V) to avoid ground loops. If using double-shielded cables, ground the outer shield on the controller end and the inner shield on the other end.



60028AXX

Figure 6: Correct shield connection using metal clamp (shield clamp) or cable gland

- You can also use **grounded sheet-metal ducts or metal pipes** to **shield the cables**. **Route** the **power and control cables separately**.
- Provide **high frequency compatible grounding** for the **inverter** and **all additional units** (wide area metal-on-metal contact between the unit housing and ground, e.g. unpainted control cabinet mounting panel).

	NOTE
	• This is a product with restricted availability in accordance with IEC 61800-3. It may cause interference in residential environments. In this case, the operator may need to implement appropriate measures. • For detailed information on EMC compliant installation, refer to the publication "Electromagnetic Compatibility in Drive Engineering" from SEW-EURODRIVE.

Line filter

- **Sizes 1 and 2** are fitted with a **line filter as standard**. This line filter ensures that **limit value class A is maintained on the supply side**. Use an NF...-... line filter as an option to maintain the class B limit.
- The **NF...-... input filter option** is required for **sizes 3 to 5** to maintain class A and B limits.
- Install the **line filter close to the inverter** but outside the minimum clearance for cooling.
- Do not switch between the line filter and MOVIDRIVE®.
- Keep the **length of the cable between the line filter and inverter to an absolute minimum**, and never more than 400 mm. Unshielded, twisted cables are sufficient. Use also unshielded lines for the supply system lead.
- This line filter must be mounted either **directly at the entry point into the switch cabinet or close to the inverter** if **several inverters are connected to the same line filter**. The line filter must be chosen on the basis of the total current of the connected inverters.
- **No EMC limits are specified for interference emission** in **voltage supply systems without earthed star point** (IT systems). The **effectiveness of input filters** in IT systems is **severely limited**.

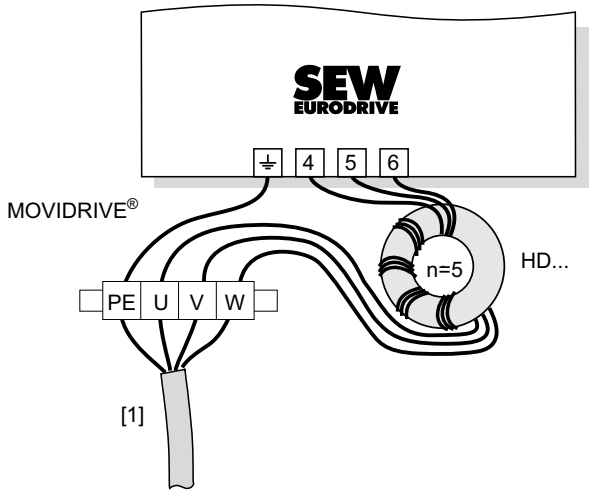
Interference emission

SEW-EURODRIVE recommends the following **EMC measures on the output side to maintain the class A and B limits**:

- Shielded motor cable
- HD... output choke option

HD... output choke

- Install the **output choke close to the inverter** but outside the minimum clearance for cooling.
- Route **all three phases of the motor cable [1] through the output choke**. To achieve a higher filter effect, **do not route the PE conductor through the output choke**.



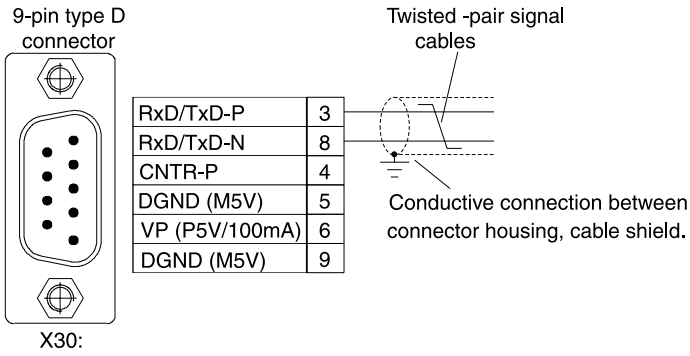
60029AXX

[1] Motor cable

4.2 Installation notes for PROFIBUS-DP interface (MC_41A)

Pin assignment

For connection to the PROFIBUS network, use a 9-pole Sub-D connector in accordance with IEC 61158 (→ following figure). The T-bus connection must be made using a plug with the corresponding configuration.



02893AEN

As a rule, the MOVIDRIVE® *compact* drive inverter is connected to the PROFIBUS system using a shielded twisted-pair cable. Observe the maximum supported transmission rate when selecting the bus connector.

The twisted-pair cable is connected to the PROFIBUS connector using pins 3 (RxD/TxD-P) and 8 (RxD/TxD-N). Communication takes place via these two contacts. The RS485 signals RxD/TxD-P and RxD/TxD-N must be connected to the same contacts in all PROFIBUS stations. Otherwise, no communication is possible via the bus medium. The PROFIBUS interface sends a TTL control signal for a repeater or fiber optic adapter (reference = pin 9) via pin 4 (CNTR-P).

Shielding and routing bus cables

The PROFIBUS interface supports RS485 transmission technology and requires the cable type A to IEC 61158 specified as the physical medium for PROFIBUS. This cable must be a shielded, twisted-pair cable.

Correct shielding of the bus cable attenuates electrical interference that may occur in industrial environments. The following measures ensure the best possible shielding:

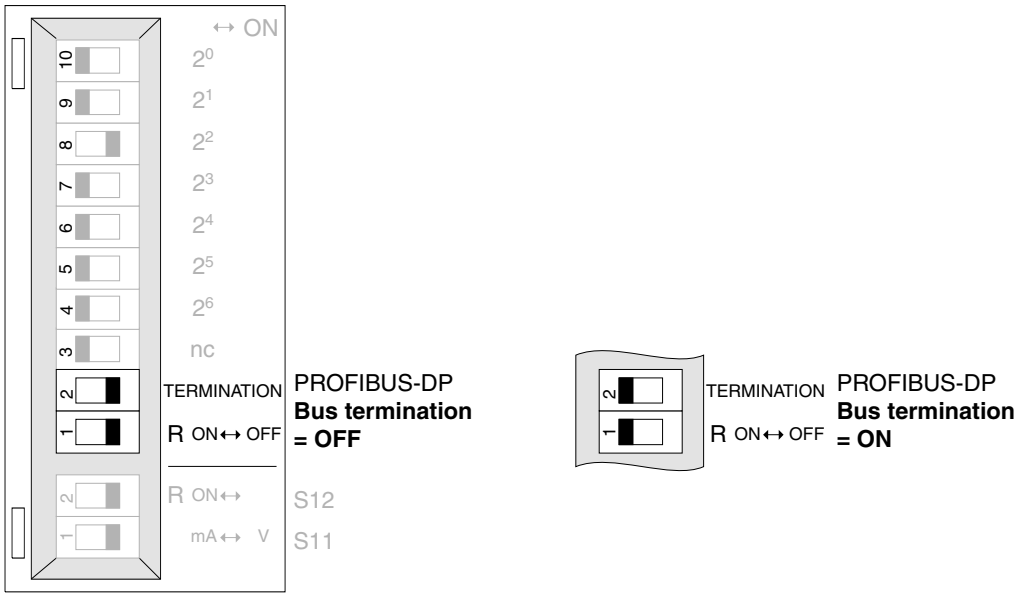
- Manually tighten the mounting screws on the connectors, modules, and equipotential bonding conductors.
- Use only connectors with a metal housing or a metallized housing.
- Connect the shielding in the connector over a wide surface area.
- Apply the shielding of the bus line on both ends.
- Route signal and bus cables in separate cable ducts. Do not route them parallel to power cables (motor leads).
- Use metallic, grounded cable racks in industrial environments.
- Route the signal cable and the corresponding equipotential bonding close to each other using the shortest possible route.
- Avoid using plug connectors to extend bus cables.
- Route the bus cables closely along existing grounding surfaces.

	NOTE
	In case of fluctuations in the ground potential, a compensating current may flow via the bilaterally connected shield that is also connected to the protective earth (PE). Make sure you supply adequate equipotential bonding according in accordance with relevant VDE regulations in such a case.

Bus connection for MCF/MCV/MCS41 A

If the MOVIDRIVE® *compact* drive inverter is at the start or end of a PROFIBUS segment, a T-bus connection with incoming and outgoing PROFIBUS cable is not normally used for connection to the PROFIBUS network. Instead, only one PROFIBUS cable is used. To prevent malfunctions in the bus system due to reflections, etc., the PROFIBUS segment must be terminated using bus terminating resistors at the first and last stations.

As the bus terminating resistors in the inverter (DIP switch under the connection unit → Sec. "Removing the connection unit" on page 33) can be activated, you can dispense with the Sub-D connector with integrated terminating resistors.



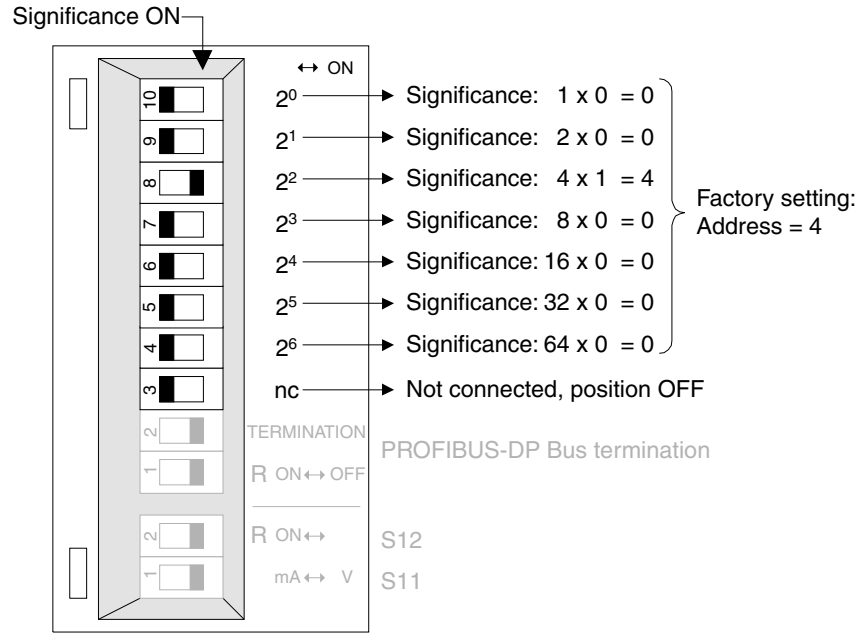
02894AEN

Figure 7: Activating the bus terminating resistor for MCF/MCV/MCS41A using the DIP switches

	NOTE
	• Both DIP switches (TERMINATION 1 and 2) must always be activated. • Bus termination is implemented for cable type A to IEC 61158. • If you use a Sub-D connector with integrated bus terminating resistors, do not activate the terminating resistors on the inverter!

Setting the station address for MCF/MCV/MCS41 A

The PROFIBUS station address is set using DIP switches 4...10 (significance 2^6... 2^0) under the connection unit (→ Sec. "Removing the connection unit" on page 33). MOVIDRIVE® *compact* supports the address range 0 to 125.

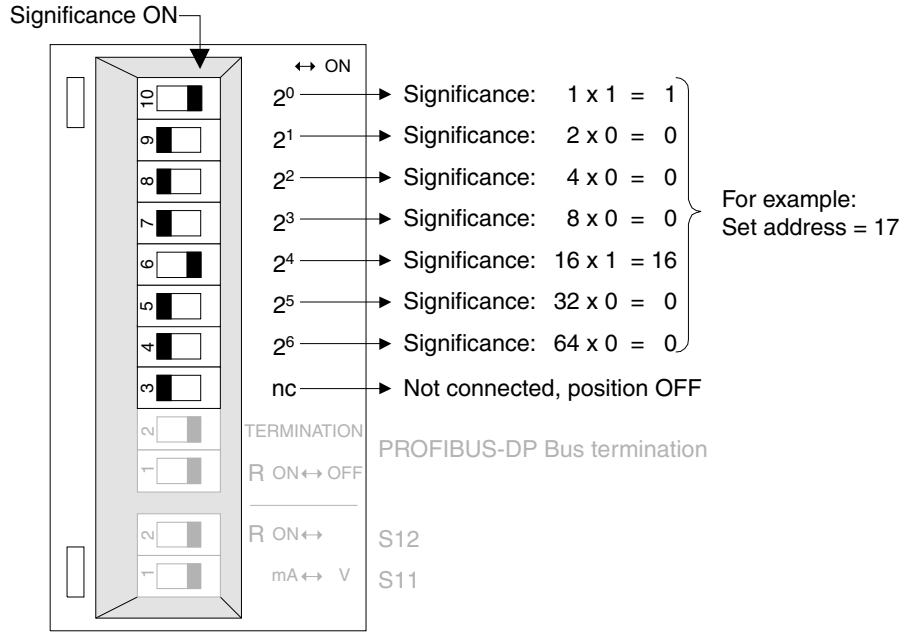


02895AEN

Figure 8: Setting the PROFIBUS station address for MCF/MCV/MCS41A

The PROFIBUS station address can only be set using the DIP switches when the connection is removed. Therefore, the address cannot be changed during operation. The change only comes into effect when the drive inverter is switched on again (power supply + DC 24 V OFF/ON). The drive inverter displays the current station address in fieldbus monitor parameter P092 "Fieldbus address" (display with DBG11B or MOVITOOLS/SHELL).

Example: Setting station address 17



03003AEN

Figure 9: Setting station address 17

4.3 UL-compliant installation

Note the following points for UL-compliant installation:

- Only use copper cables with the **following rated thermal values** as connection cables:
  - MOVIDRIVE® *compact* MC_4_A0015 ... 0300: Rated thermal value 60 °C / 75 °C
  - MOVIDRIVE® *compact* MC_4_A0370 ... 0750: Rated thermal value 75 °C
- **Permitted tightening torques** for MOVIDRIVE® *compact* power terminals:
  - Size 1 → 0.6 Nm
  - Size 2 → 1.5 Nm
  - Size 3 → 3.5 Nm
  - Sizes 4 and 5 → 14 Nm
- MOVIDRIVE® *compact* drive inverters are **suited for operation on voltage supply systems with grounded star point** (TN and TT systems) that supply a maximum current according to the following tables and have a max. voltage of AC 240 V for MOVIDRIVE® *compact* MC_4_A...2_3 (AC 230 V units) and AC 500 V for MOVIDRIVE® *compact* MC_4_A...-5_3 (AC 400/500 V units). The performance data of the fuses must not exceed the values listed in the tables.

400/500 V units

MOVIDRIVE® *compact* MC_4_A...5_3	Max. supply current	Max. supply voltage	Fuses
0015/0022/0030/0040	AC 10000 A	AC 500 V	AC 35 A / 600 V
0055/0075/0110	AC 5000 A	AC 500 V	AC 30 A / 600 V
0150/0220	AC 5000 A	AC 500 V	AC 175 A / 600 V
0300	AC 5000 A	AC 500 V	AC 225 A / 600 V
0370/0450	AC 10000 A	AC 500 V	AC 350 A / 600 V
0550/0750	AC 10000 A	AC 500 V	AC 500 A / 600 V

230 V units

NOTES

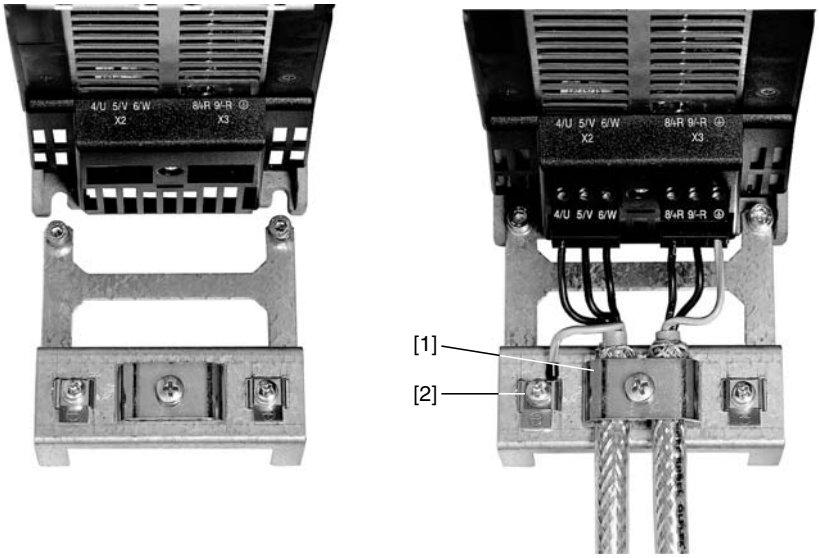
- Use only tested units with a **limited output voltage** (V_{max} = DC 30 V) and **limited output current** (I ≤ 8 A) as an **external DC 24 V voltage source**.
- **UL certification does not apply to operation in voltage supply systems with a non-grounded star point (IT systems).**

4.4 Shield clamps

The shield clamps for the power sections provide you with a very easy way of installing the shield for the motor and brake cables. Apply the shield and PE conductor as shown in the figures.

Shield clamp for power section, size 1

A shield clamp is supplied as standard for the power section with MOVIDRIVE® *compact* size 1. Install this shield clamp together with the unit's retaining screws.



02012CXX

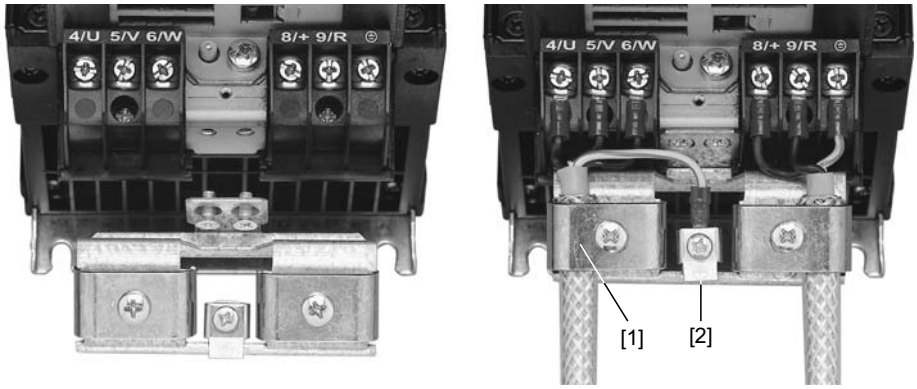
Figure 10: Attaching the shield clamp of the power section (MOVIDRIVE® compact size 1)

[1] Shield clamp

[2] PE connection (⏚)

Shield clamp for power section, size 2

A shield clamp for the power section is supplied as standard with two retaining screws for MOVIDRIVE® *compact* size 2. Install these shield clamp using the two retaining screws.



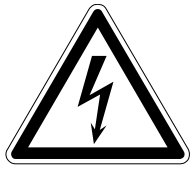
59874AXX

Figure 11: Attaching the shield clamp of the power section (MOVIDRIVE® compact size 2)

[1] Shield clamp

[2] PE connection (⏚)

4.5 Touch guard



DANGER!

Uncovered power connections.

Severe or fatal injuries from electric shock.

- Install the touch guard according to the regulations.
- Never start the unit if the touch guard is not installed.

When the touch guard is installed, MOVIDRIVE® *compact* sizes 4 and 5 provide enclosure protection IP10; without touch guard IP00.

Two touch guards with 8 retaining screws are supplied as standard with MOVIDRIVE® *compact* sizes 4 and 5. Install the touch guard on both covers of the power section terminals.

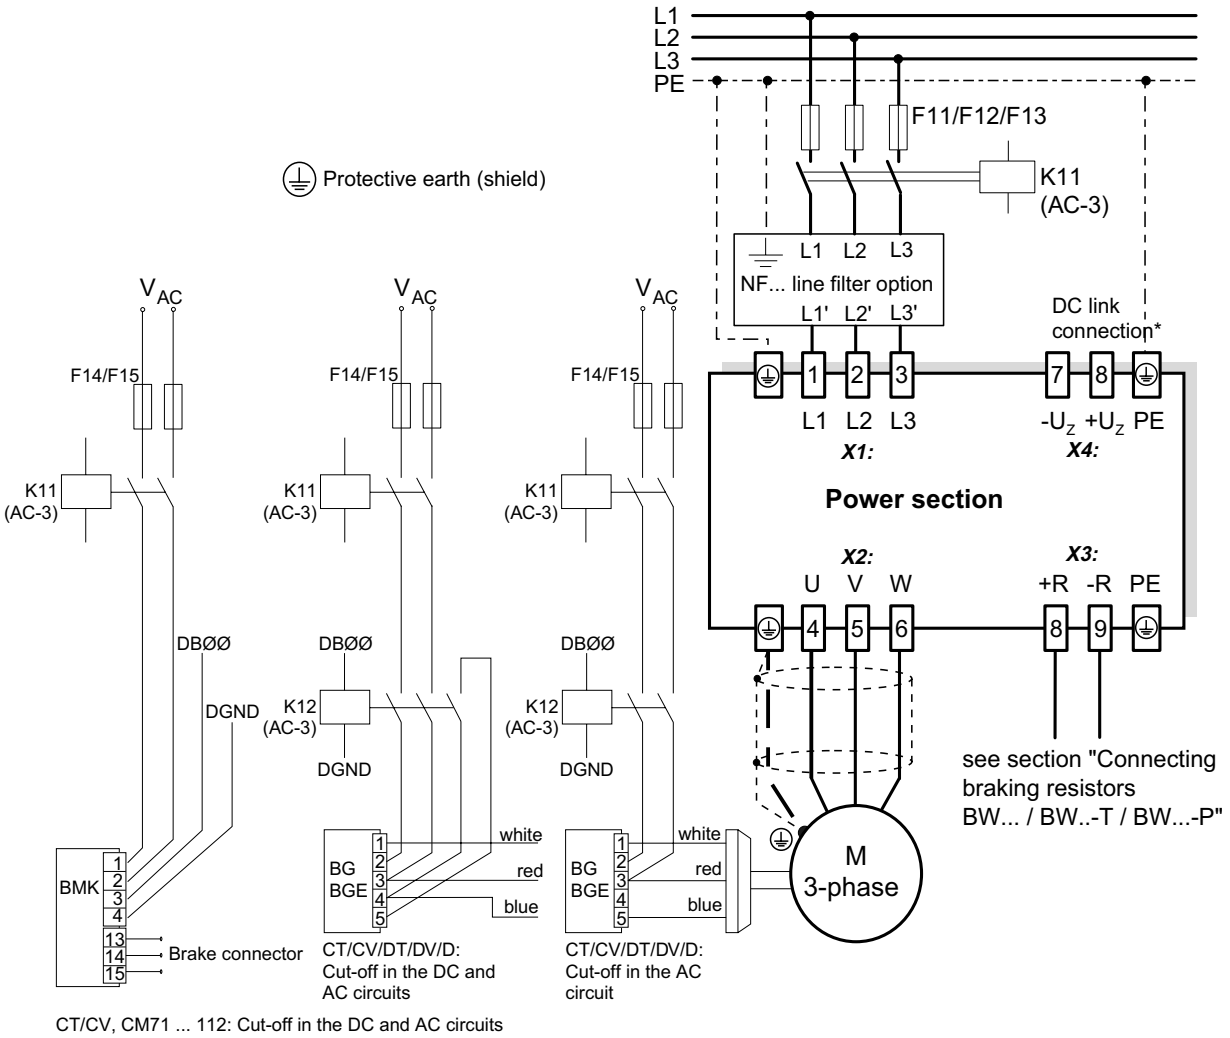
4.6 Wiring diagram for basic unit

Wiring the power section and brake



55310CEN

Figure 13: Wiring diagram, power section and brake

* With sizes 1 and 2, there is no PE connection next to the supply system connection terminals and motor connection terminals (X1, X2). In this case, use the PE terminal next to the DC link connection (X4).

Important: Read the operating instructions for the motors when connecting the brake.

STOP	**STOP!**
	If the brake rectifier is connected via the supply system lead, the braking function is restricted. • Connect the brake rectifier using a separate supply system lead. • **Supply via the motor voltage is not permitted!**

Always switch off the brake on the DC and AC sides with:

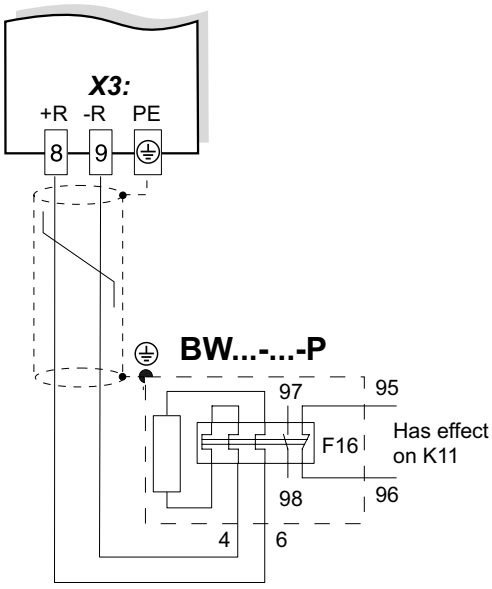
– All hoist applications
– Drives that require a rapid brake response time
– CFC and SERVO operating modes

Brake rectifier in control cabinet

Install the connection cables between the brake rectifier and the brake separately from other power cables when installing the brake rectifier in the control cabinet. Joint installation is only permitted with shielded power cables.

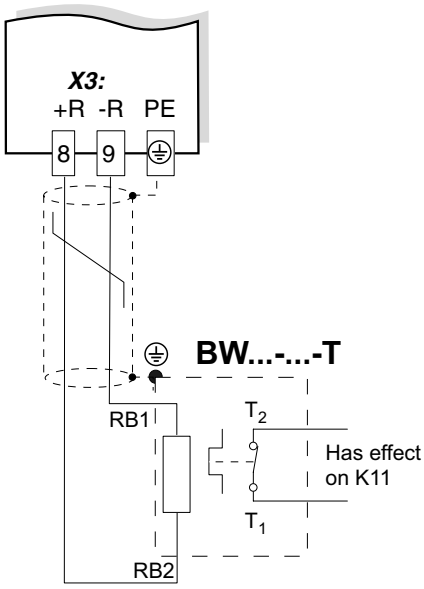
Connecting BW... / BW...-...-T /BW...-...-P braking resistors

Power section



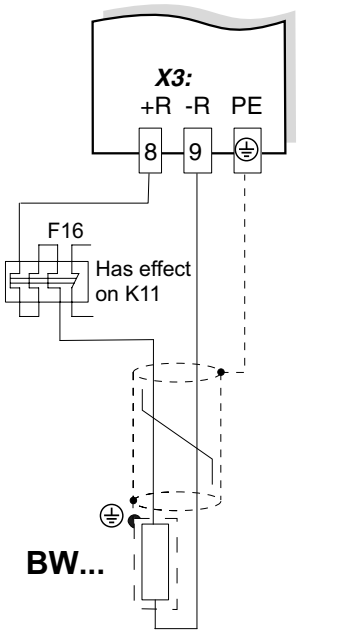
When the auxiliary contact trips, K11 must be opened and DIØØ"/Controller inhibit" assigned a "0" signal. Do not interrupt the resistor circuit!

Power section



When the internal temperature switch triggers, K11 must be opened and DIØØ"/Controller inhibit assigned a "0" signal. Do not interrupt the resistor circuit!

Power section

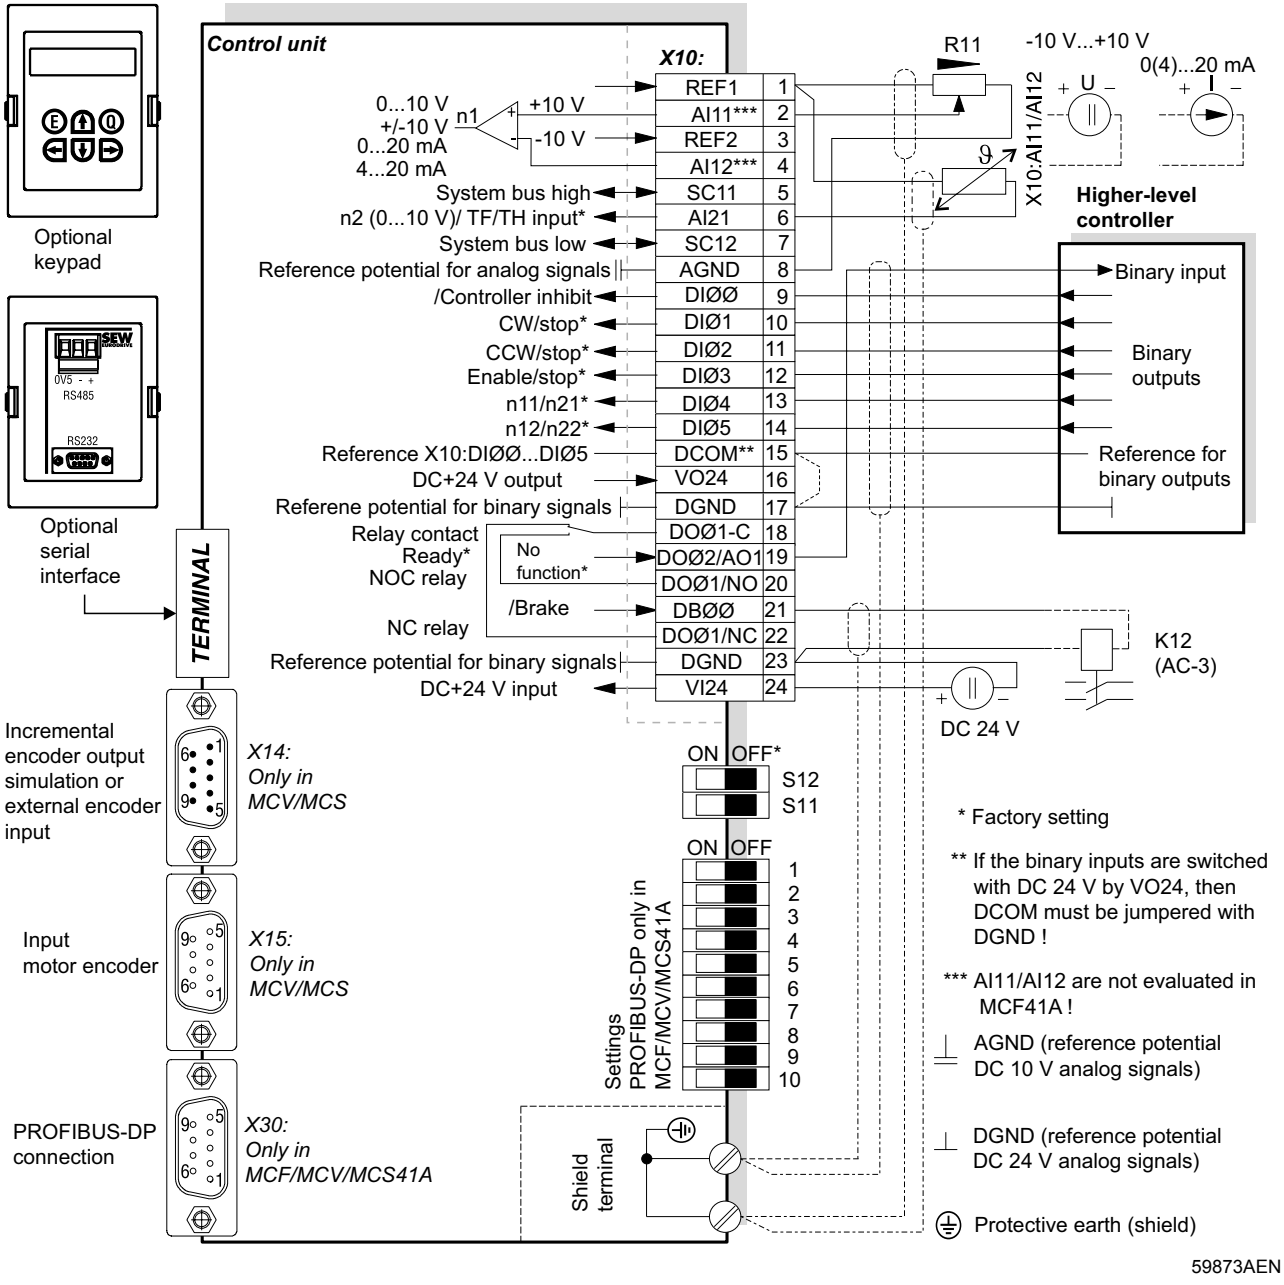


When the external bimetallic relay (F16) triggers, K11 must be opened and DIØØ"/Controller inhibit" assigned a "0" signal. Do not interrupt the resistor circuit!

59500AEN

Braking resistor type	Overload protection		
	Design specified	Internal temperature switch (..T)	External bimetallic relay (F16)
BW...	-	-	Required
BW...-...-T	-	One of the two options (internal temperature switch / external bimetallic relay) is required.	
BW...-003 / BW...-005	Adequate	-	Permitted

MCF/MCV/MCS4_A control unit: Wiring diagram for the control unit



59873AEN

- **MCF/MCV/MCS41A (with PROFIBUS-DP):** SEW-EURODRIVE recommends that you always supply these units with DC 24 V at terminal X10:24 (VI24). This external DC 24 V voltage supply must be able to provide 50 W continuous power and 100 W peak power (1 s).
- Analog input AI21 (X10:6) can be used either as a 10 V voltage input or as a TF/TH input. It is switched over using parameter P120.
- You can only access DIP switches S11, S12 and 1 ... 10 when the connection unit is removed (→ Sec. "Removing the connection unit").
- The functions of the DIP switches 1 ... 10 are explained in the sections "Bus termination" and "Setting the station address".
- The TF/TH line must either be shielded or routed at a distance of at least 0.2 m from power cables (e.g. motor or brake cables). The TF/TH line must be shielded separately if hybrid cables are used for the motor and TF/TH connection.

MCF/MCV/MCS4_A: Functional description of the terminals on the basic unit

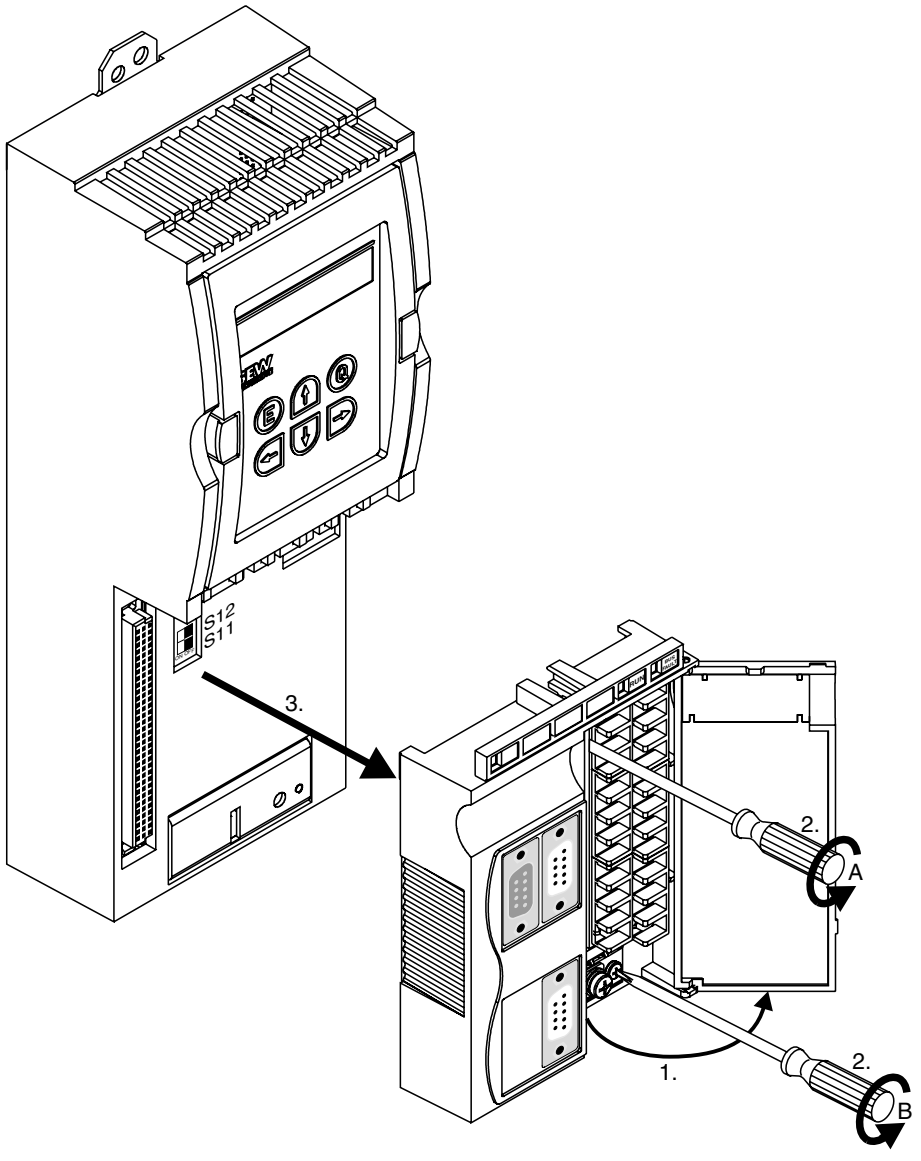
Figure 14: Electronics terminals and label on MCV41A

4.7 Removing the connection unit

	NOTE
	Turn off the supply voltage and DC 24 V auxiliary voltage before removing the connection unit.

For simple installation of the control leads, remove the entire connection unit from the control unit. You have to remove the connection unit to set the DIP switches for PROFIBUS (1 ... 10), INTERBUS (S1...S6), signal switchover n1 (S11) and SBus terminating resistor (S12). Proceed as follows:

1. Open the panel of the connection unit.
2. Loosen retaining screws A and B; they are captive screws and cannot fall out.
3. Remove the connection unit from the control module.



60111AXX

Follow the instructions in reverse order when installing the connection unit.

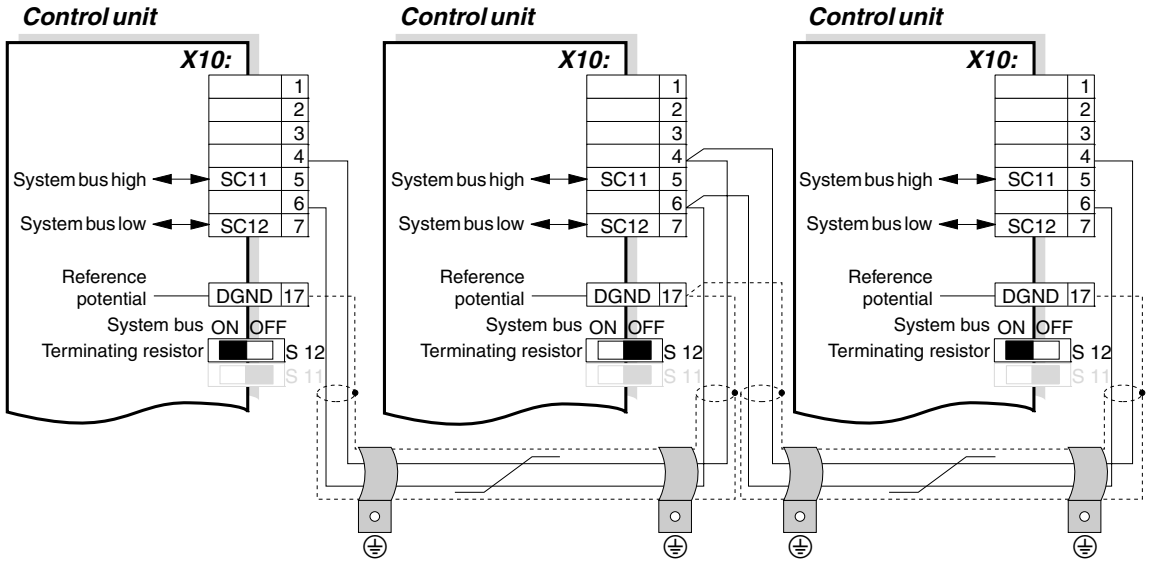
4.9 Installing the system bus (SBus)

	NOTE
	Only if P884 "SBus baud rate" = 1000 kBaud: Do not combine MOVIDRIVE® *compact* MCH4_A units with other MOVIDRIVE® units in the same system bus system. The units may be combined at baud rates ≠ 1000 kBaud.

Wiring diagram for SBus MOVIDRIVE® compact MCF/MCV/MCS4_A



02411AEN

Cable specification

- Use a 2-core twisted and shielded copper cable (data transmission cable with braided copper shield). The cable must meet the following specifications:
  - Core cross section 0.75 mm^2 (AWG 18)
  - Line resistance 120 Ω at 1 MHz
  - Capacitance per unit length ≤ 40 pF/m at 1 kHz

  Suitable cables include CAN bus or DeviceNet cables.

Shielding

- Connect the shield at both ends to the electronics shield clamp of the inverter or the master controller and ensure the shield is connected over a large area. Also connect the ends of the shield to DGND.

Cable length

- The permitted total cable length depends on the baud rate setting of the SBus (P816):
  - 125 kbaud → 320 m
  - 250 kbaud → 160 m
  - **500 kBaud → 80 m**
  - 1000 kbaud → 40 m

Terminating resistor

- Switch on the system bus terminating resistor (S12 = ON) at the start and end of the system bus connection. Switch off the terminating resistor at the other devices (S12 = OFF).

	**STOP!**
	There must not be any potential displacement between the units connected with the SBus. This can restrict the functionality of the units. Take suitable measures to avoid a potential displacement, e.g. by connecting the unit ground connectors using a separate lead.

4.10 Connecting option USS21A (RS232 and RS485)

Part number

Interface adapter option USS21A: 822 914 7

RS232 connection

- Use a standard shielded interface cable with a 1:1 connection for connecting the RS232 interface.

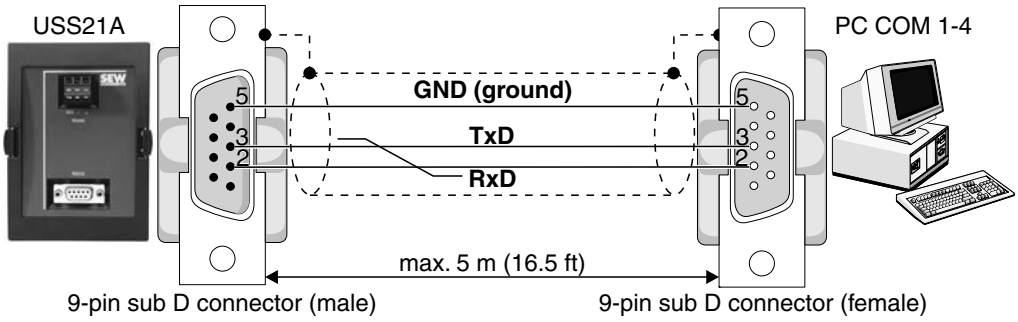


Figure 15: USS21A - PC connection cable (1:1 connection assignment)

RS485 connection

Read the following connection instructions carefully:

- Use a 2-core twisted and shielded copper cable (data transmission cable with braided copper shield). The cable must meet the following specifications:
  - Core cross section 0.5 ... 0.75 mm^2 (AWG 20 ... 18)
  - Cable resistance 100 ... 150 Ω at 1 MHz
  - Capacitance per unit length ≤ 40 pF/m at 1 kHz
- Connect the shield at both ends to the electronics shield clamp of the inverter and ensure the shield is connected over a large area. Also connect the ends of the shield to DGND.

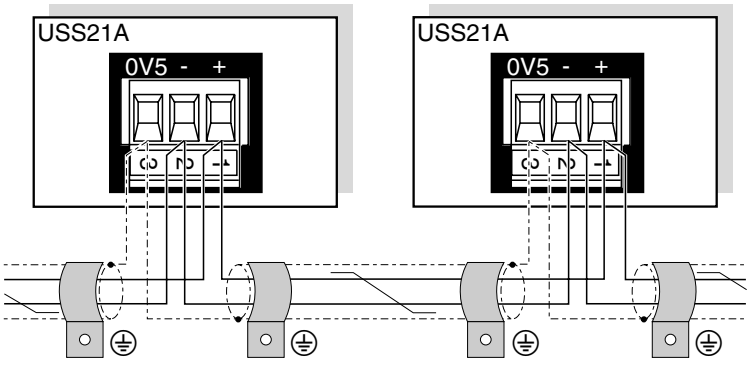

Figure 16: RS485 interface of USS21A

EIA standard

The RS485 interface of the USS21A complies with the EIA standard:

- Max. transmission rate 9600 Baud
- Max. 32 stations (each unit with USS21A counts as 2 stations)
- Max. total cable length 200 m
- Dynamic terminating resistor with fixed installation

4.11 Connecting the interface adapter USB11A / DKG11A

Part number

- 824 831 1 Interface adapter USB11A
- 819 558 7 Serial interface cable DKG11A (length 3 m)

Description

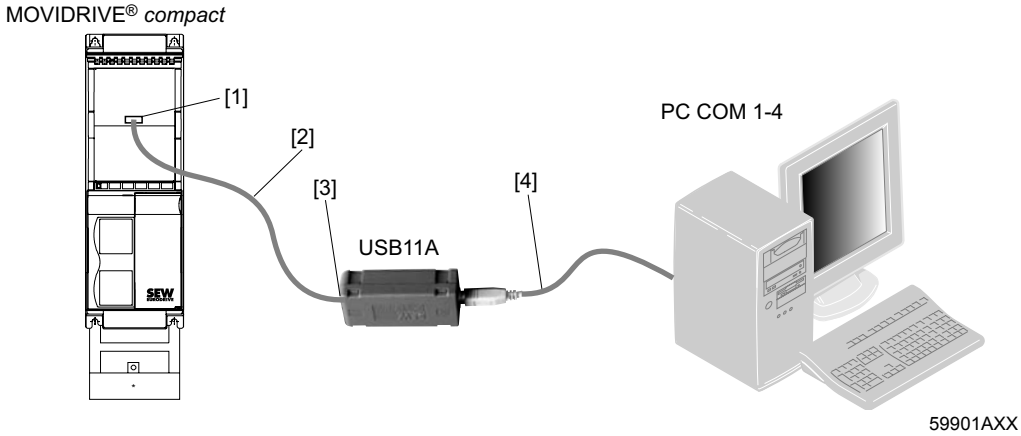
Option USB11A enables a PC or laptop with a USB interface to be connected to the TERMINAL slot of MOVIDRIVE® *compact*. The USB11A interface adapter supports USB1.1 and USB2.0.

Scope of delivery

- The scope of delivery for the USB11A includes:
  - USB11A interface adapter
  - USB connection cable PC - USB11A (type USB A-B)
  - CD-ROM with drivers and MOVITOOLS®
- The USB11A interface adapter supports USB 1.1 and USB 2.0.
- The scope of delivery for the USB11A **does not** include:
  - DKG11A connection cable (length 3 m, part number 819 558 7) for connecting MOVIDRIVE® *compact* - USB11A.

Connecting MOVIDRIVE® - USB11A - PC

- MOVIDRIVE® *compact* is connected to USB11A (cable RJ10-TERMINAL) using the serial interface cable type DKG11A (length 3 m, part number 819 558 7).
- USB11A is connected to the PC using a commercially available, shielded USB connection cable type USB A-B.



[1] TERMINAL connection on MOVIDRIVE® *compact*

[2] DKG11A interface cable, length 3 m

[3] USB11A interface adapter

[4] USB connection cable type USB A-B

Dimension drawing

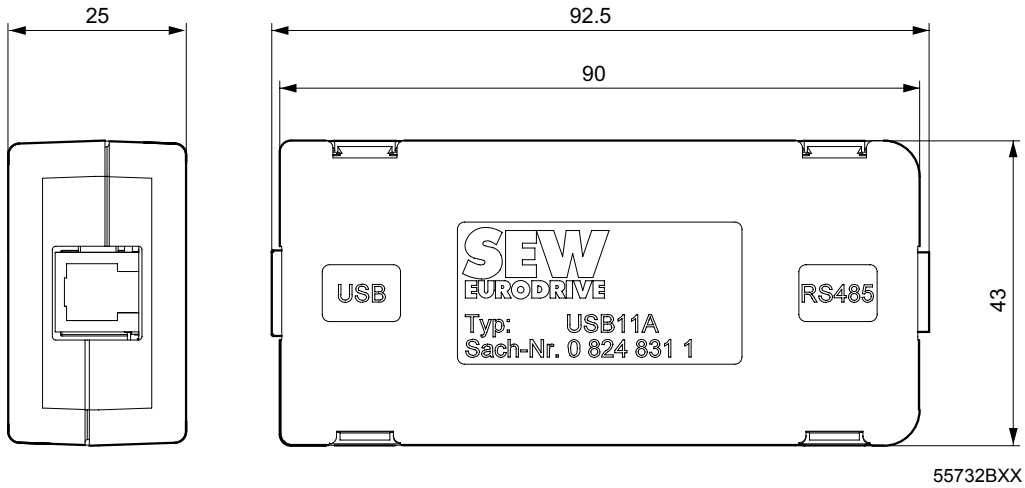


Figure 17: USB11A dimension drawing, dimensions in mm

Technical data

USB11A	
Part number	824 831 1
Ambient temperature	0 ... 40 °C
Storage temperature	–25 °C ... +70 °C (according to EN 60721-3-3, class 3K3)
Enclosure	IP20
Weight	300 g
Dimensions	92.5 x 43 x 25 mm

4.12 Connection of motor encoder and external encoder

	NOTE
	The wiring diagrams do not show the view onto the cable end. They show the connection to the motor or MOVIDRIVE®. The core colors specified in the wiring diagrams are in accordance with the IEC 757 color code and correspond to the core colors used in the prefabricated cables from SEW. For more details, refer to the "SEW Encoder Systems" manual, which can be obtained from SEW-EURODRIVE.

General installation instructions

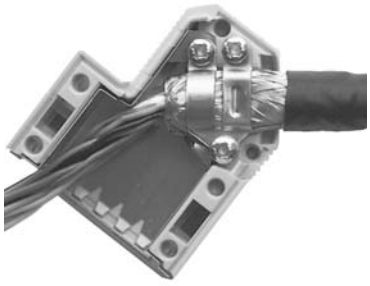
- Max. line length inverter - encoder: 100 m with a capacitance per unit length ≤ 120 nF/km.
- Core cross section 0.20 ... 0.5 mm^2 (AWG 24 ... 20)
- If you cut a core of the encoder cable, isolate the cut-off end of the core.
- Use shielded cables with twisted pair conductors and make sure they are grounded on both ends over a large surface area:
  - At the encoder in the cable gland or in the encoder plug
  - At the inverter in the housing of the Sub-D connector and at the electronics shield clamp of the inverter
- Use an encoder connector and Sub-D connector with metal housing.
- Route the encoder cable separately from the power cables.
- Encoder with cable gland: Observe the permitted diameter of the encoder cable to ensure that the cable gland functions correctly.

Shielding

Connect the shield of the encoder/resolver cable over a large area.

On the inverter

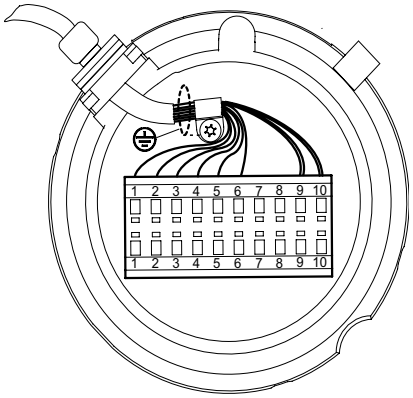
Connect the shield on the inverter end in the housing of the sub D connector (→ following illustration).



01939BXX

On the encoder/resolver

Connect the shield on the encoder/resolver side at the respective earthing clamps (→ following illustration). When using an EMC screw fitting, apply the shield over a wide area in the cable gland. For drives with a plug connector, connect the shield on the encoder plug.



55513AXX

Prefabricated cables

SEW-EURODRIVE offers prefabricated cables for connecting encoders/resolvers. We recommend using these prefabricated cables.

Motor encoder

You can connect the following motor encoders at X15 on the MOVIDRIVE® *compact* units:

- MCV4_A
  - High-resolution sin/cos encoders with signal voltage AC 1 V_{SS}
  - TTL sensors with signal level to RS422
  - HTL sensors

- MCS4_A
  - 2-pole resolvers, AC 7 V_{eff} / 7 kHz

05232AXX

Figure 18: SEW encoder with plug connector or connecting terminal

Voltage supply

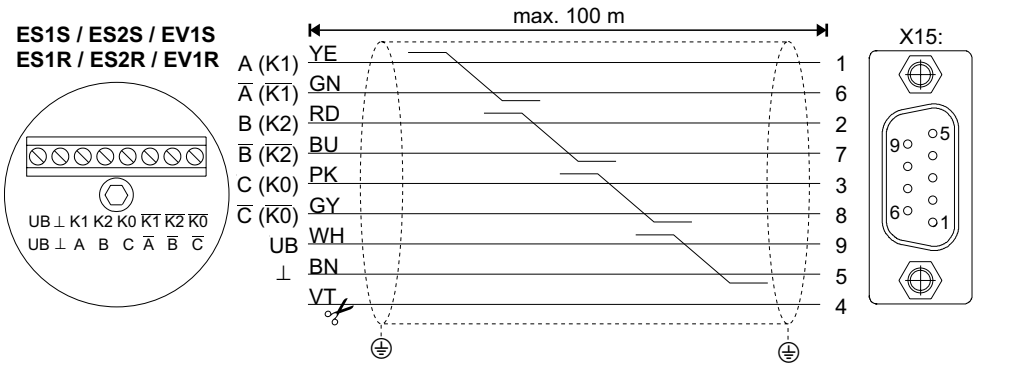
Connect encoders with DC 12 ... 24 V voltage supply (max. DC 180 mA) directly at X15. These encoders are then powered by the inverter.

Connect encoders with a DC 5 V voltage supply via the "DC 5 V encoder power supply type DWI11A" option (part number 822 759 4).

sin/cos encoders

High-resolution sin/cos encoders ES1S, ES2S or EV1S are recommended for operation with MOVIDRIVE® *compact* MCV4_A. Connect the sin/cos encoder as follows:

Connection to MCV4_A



59849AXX

Figure 19: Connecting the sin/cos encoder to MCV4_A as a motor encoder

Cut off the violet conductor (VT) of the cable at the encoder end.

Part numbers of the prefabricated cables:

- For fixed routing: 198 829 8
- For cable carrier routing: 198 828 X

TTL sensor

TTL sensors from SEW-EURODRIVE are available with DC 12...24 V and DC 5 V voltage supply.

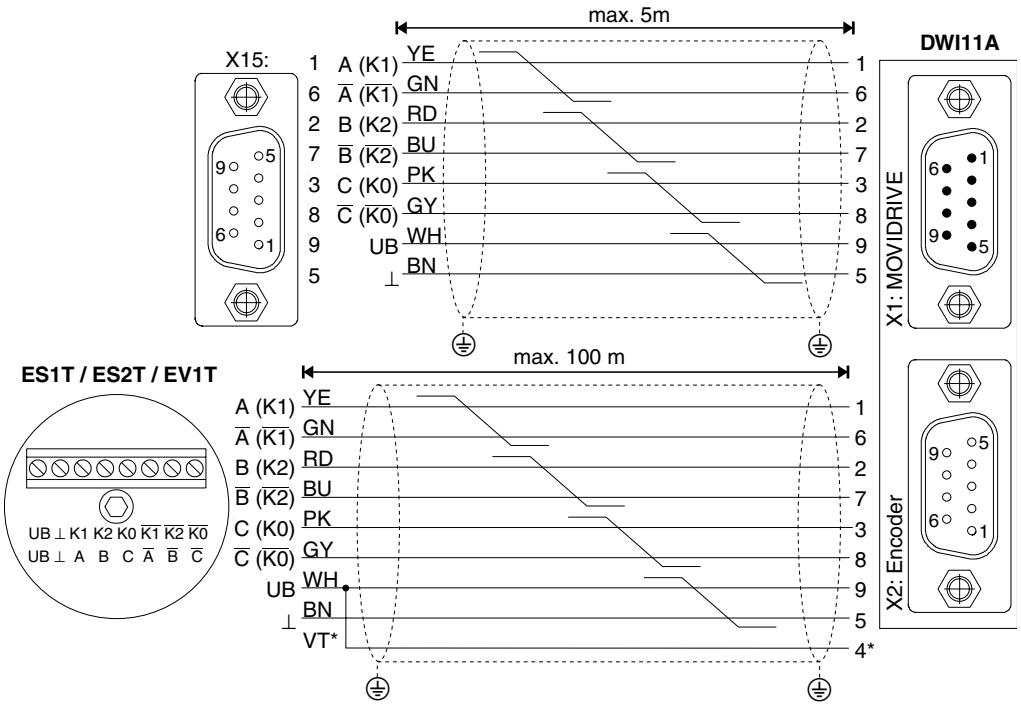
DC 12...24 V voltage supply

Connect TTL sensors with DC 12 ... 24 V voltage supply ES1R, ES2R or EV1S in the same way as the high-resolution sin/cos encoders.

DC 5 V voltage supply

TTL sensors with a DC 5 V voltage supply ES1T, ES2T or EV1T must be connected via the "DC 5 V encoder power supply type DWI11A" option (part number 822 759 4). You must also connect the sensor cable to be able to correct the supply voltage of the encoder. Connect this encoder as follows:

Connection to MCV4_A



59851AXX

Figure 20: Connecting the TTL sensor via DWI11A to MCV4_A as a motor encoder

* Connect the sensor cable (VT) on the encoder to UB, do not jumper with DWI11A!

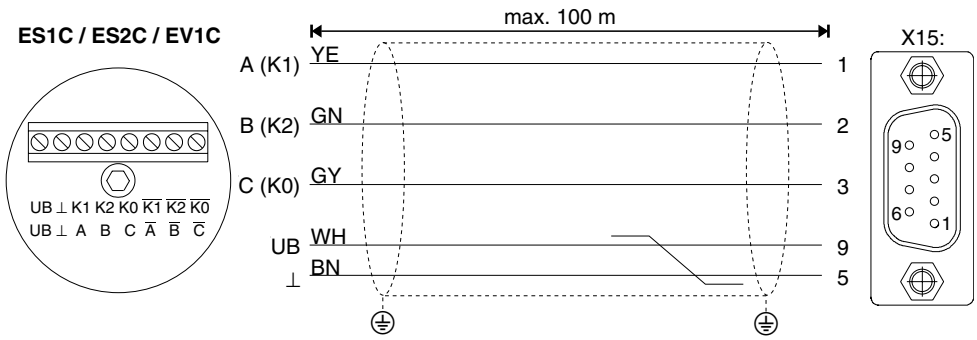
Part numbers of the prefabricated cables:

- MOVIDRIVE® *compact* MCV4_A, X15: → DWI11A X1:MOVIDRIVE
  - Fixed routing only: 814 344 7

- Encoders ES1T / ES2T / EV1T → DWI11A X2:Encoder
  - For fixed routing: 198 829 8
  - For cable carrier routing: 198 828 X

HTL encoder (only for MCV4_A)

If you are using an **ES1C, ES2C or EV1C HTL sensor**, **do not connect** the **negated channels** $\overline{A}$ ($\overline{K1}$), $\overline{B}$ ($\overline{K2}$) and $\overline{C}$ ($\overline{K0}$).



59853AXX

Figure 21: Connecting the HTL encoder to MCV4_A as a motor encoder

Part numbers of the prefabricated cables:

- For fixed routing: 198 932 4
- For cable carrier routing: 198 931 6

Resolver (only for MCS4_A)

Depending on the motor type and motor configuration, you can connect the resolver using either a plug connector or via the terminal box.

DS56, CM71...112 with plug connector

The resolver connections are accommodated in a plug connector.

Plug connector DS56, CM: Intercontec, type ASTA021NN00 10 000 5 000

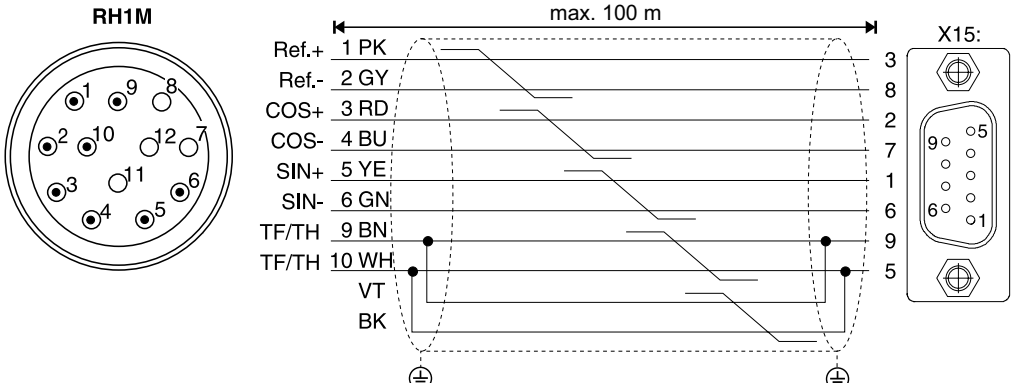


Figure 22: Resolver connection for DS56 and CM motors with plug connector

Part numbers of the prefabricated cables:

- For fixed routing: 199 487 5
- For cable carrier routing: 199 319 4

Part numbers of the prefabricated extension cables:

- For fixed routing: 199 542 1
- For cable carrier routing: 199 541 3

DS56, CM71...112 with terminal box

The resolver connections are accommodated in the terminal box on a 10-pole Phoenix terminal strip.

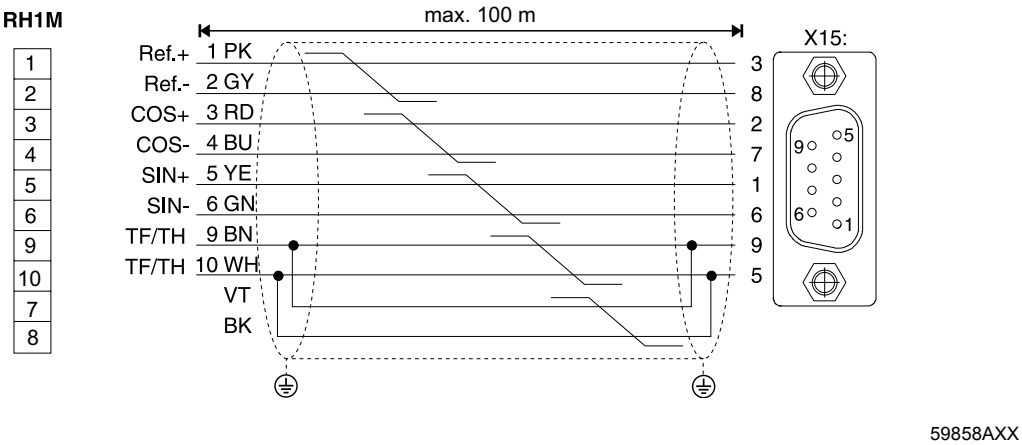

Figure 23: Resolver connection for DS and CM motors with terminal box

Cut off the violet conductor (VT) of the cable at the encoder end.

Part numbers of the prefabricated cables:

- For fixed routing: 199 589 8
- For cable carrier routing: 199 590 1

External encoders

You can connect the following motor encoders at X14 on the MOVIDRIVE® *compact* MCV/MCS4_A units:

- DC 5 V TTL sensors with signal level to RS422

Voltage supply

Connect encoders with DC 12/24 V voltage supply (max. 180 mA) directly at X14. These encoders are then powered by the inverter.

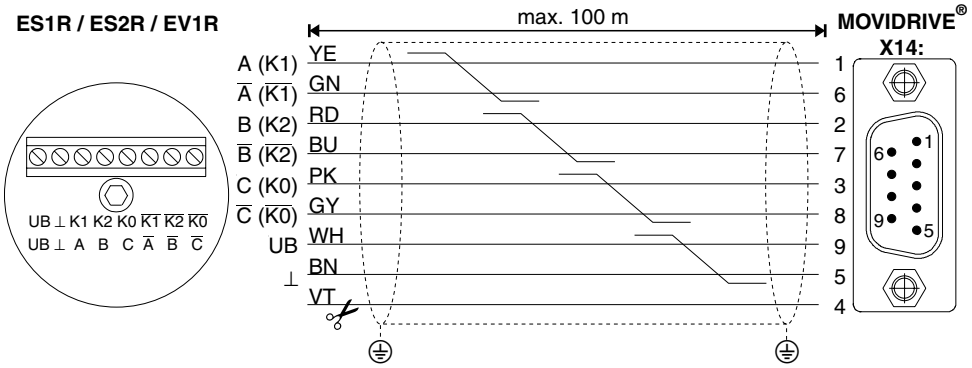
Connect encoders with a DC 5 V voltage supply via the "DC 5 V encoder power supply type DWI11A" option (part number 822 759 4).

DC 5 V TTL sensor

DC 5 V TTL sensors from SEW-EURODRIVE are available with D 24 V and DC 5 V voltage supply.

DC 24 V voltage supply

Connection to MCV/MCS4_A:



59859AXX

Figure 24: Connect the TTL sensor to MCV/MCS4_A as an external encoder

Cut off the violet conductor (VT) of the cable at the encoder end.

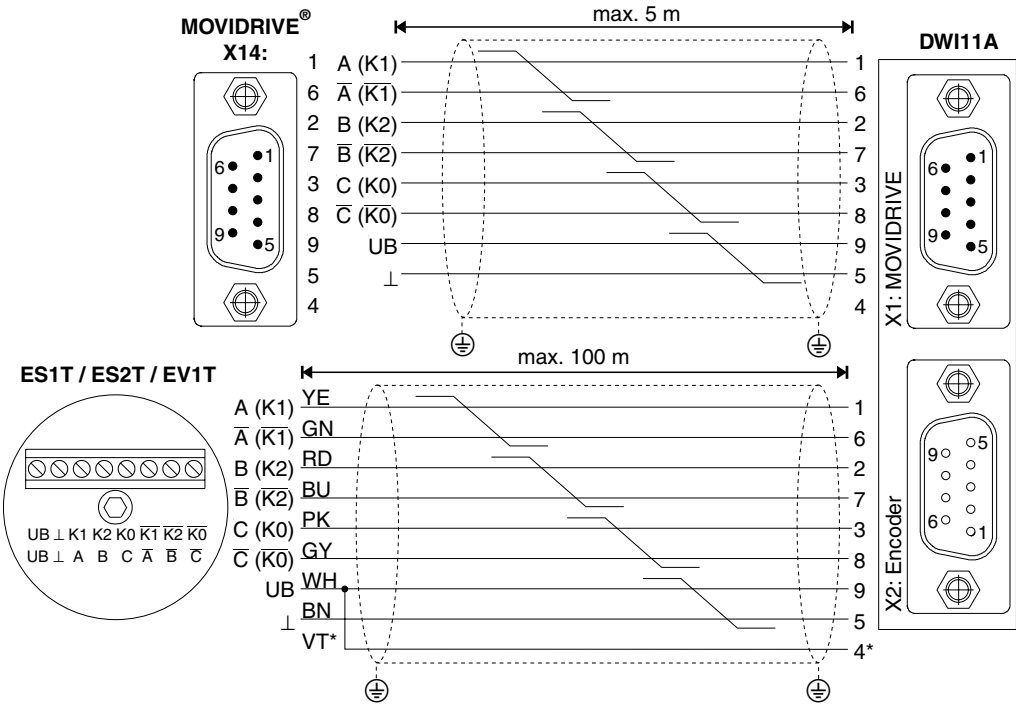
Part number of the prefabricated cable:

- Fixed routing only: 815 354 X

DC 5 V voltage supply

Connect DC 5 V TTL sensors with a DC 5 V voltage supply ES1T, ES2T or EV1T using the "DC 5 V encoder power supply type DWI11A" option (part number 822 759 4). You must also connect the sensor cable to be able to correct the supply voltage of the encoder.

Connection to MCV/MCS4_A:



59861AXX

Figure 25: Connecting the TTL sensor to MCV/MCS4_A via DWI11A as an external encoder

* Connect the sensor cable (VT) on the encoder to UB, do not jumper with DWI11A!

Part numbers of the prefabricated cables:

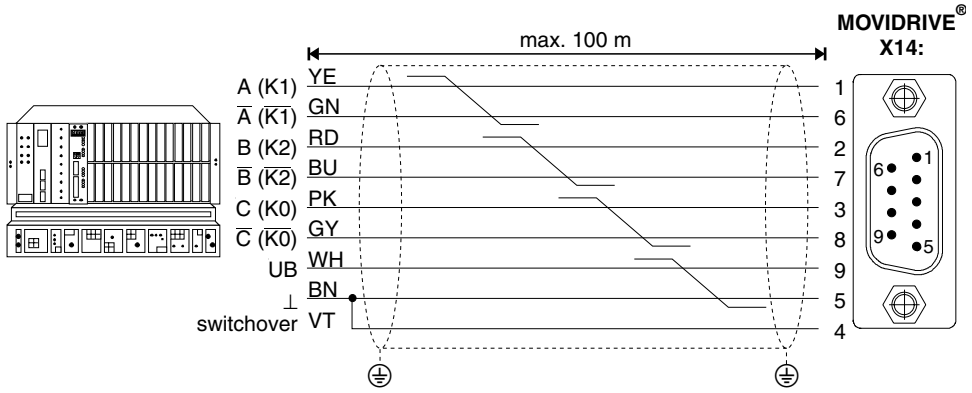
- Encoders ES1T / ES2T / EV1T → DWI11A X2:Encoder
  - For fixed routing: 198 829 8
  - For cable carrier routing: 198 828 X

Incremental encoder simulation

You can also use X14 as the output for incremental encoder simulation. For this purpose, you must jumper "switchover" (X14:4) with DGND (X14:5). X14 then supplies incremental encoder signals with a signal level in accordance with RS422. The number of pulses is:

- For MCV4_A as at X15 motor encoder input
- For MCS4_A 1024 pulses/revolution

Connection to MCV/MCS4_A



59865AEN

Figure 26: Connecting the incremental encoder simulation to MCV/MCS4_A

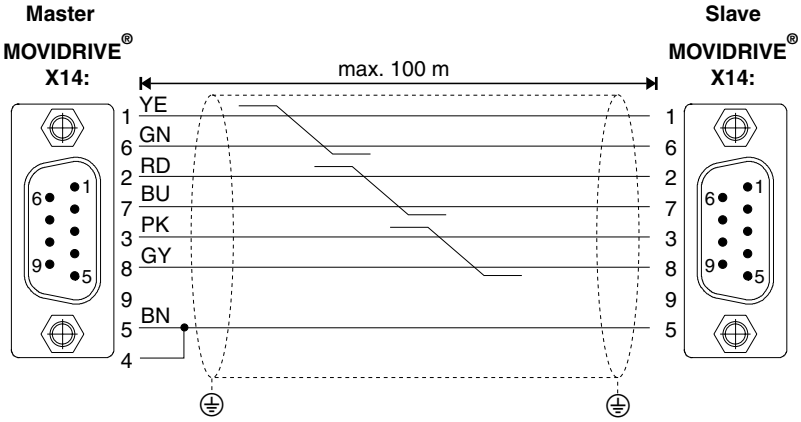
Part number of the prefabricated cable:

- Fixed routing only: 815 354 X

Master/slave connection

X14-X14 connection (= master/slave connection) of two MOVIDRIVE® *compact* units.

MCV/MCS4_A



59866AXX

Figure 27: X14-X14 connection for MCV/MCS4_A

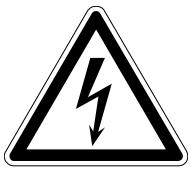
Part number of the prefabricated cable:

- Fixed routing only: 815 355 8

	NOTE
	The Sub-D sockets on the cable ends are labeled "MASTER" and "SLAVE." Make sure that you plug the socket labeled "MASTER" into X14 of the master unit and the socket labeled "SLAVE" into X14 of the slave unit.

5 Startup

5.1 General startup instructions



DANGER!

Uncovered power connections.

Severe or fatal injuries from electric shock.

- Install the touch guard according to the regulations.
- Never start the unit if the touch guard is not installed.

NOTE

Startup in accordance with this section is necessary for the VFC operating modes with speed control, all CFC operating modes and SERVO operating modes. The startup functions described in this section are used to set the inverter so it is optimally adapted to the connected motor and to the given boundary conditions.

Prerequisites

The drive must be configured correctly to ensure that startup is successful. Refer to the MOVIDRIVE® *compact* system manual (→ sections 4 and 5) for detailed project planning instructions and an explanation of the parameters.

VFC operating modes without speed control

The factory settings of MOVIDRIVE® *compact* drive inverters are set to be taken into operation with the SEW motor adapted to the correct power level (MC_4_A...-5_3: 4-pole and rated voltage 3 × AC 400 V / 50 Hz or MC_4_A...-2_3: 4-pole and rated voltage 3 × AC 230 V / 60 Hz). The motor can be connected and the drive started immediately in accordance with the section "Starting the motor" (→ page 63) .

Inverter/motor combinations

The following tables indicate which inverter/motor combinations this applies to.

AC 400/500 V units

MOVIDRIVE® *compact* MCF4_A or MCV4_A in VFC operating mode	SEW motor
0015-5A3-4	DT90L4
0022-5A3-4	DV100M4
0030-5A3-4	DV100L4
0040-5A3-4	DV112M4
0055-5A3-4	DV132S4
0075-5A3-4	DV132M4
0110-5A3-4	DV160M4
0150-503-4	DV160L4
0220-503-4	DV180L4
0300-503-4	DV200L4
0370-503-4	DV225S4
0450-503-4	DV225M4
0550-503-4	DV250M4
0750-503-4	DV280S4

AC 230 V units

MOVIDRIVE® *compact* MCF4_A or MCV4_A in VFC operating mode	SEW motor
0015-2A3-4	DT90L4
0022-2A3-4	DV100M4
0037-2A3-4	DV100L4
0055-2A3-4	DV132S4
0075-2A3-4	DV132M4
0110-203-4	DV160M4
0150-203-4	DV180M4
0220-203-4	DV180L4
0300-203-4	DV225S4

Hoist applications

DANGER!

Risk of fatal injury if the hoist falls.

Severe or fatal injuries.

Do not use MOVIDRIVE® *compact* drive inverters for any safety functions in conjunction with hoist applications. Use monitoring systems or mechanical protection devices to ensure safety.

5.2 Preliminary work and resources

- Check the installation.

DANGER!

Risk of crushing if the motor starts up unintentionally.

Severe or fatal injuries.

- Prevent unintentional start up of the motor by implementing the following measure:
  - Connect terminal X10:9 "/CONTROLLER INHIBIT" with X10:15 "DCOM".
- Furthermore, additional safety precautions must be taken depending on the application to avoid injury to people and damage to machinery.

- Performing **startup with the DBG11B keypad**:

  Plug the DBG11B keypad into the TERMINAL slot.
- For **startup with a PC and MOVITOOLS®**:

  Plug the USS21A or USB11A option into the TERMINAL slot. Connect the USS21A/USB11A option to the PC with an interface cable (RS232). If not already available, install MOVITOOLS® on the PC. Start MOVITOOLS®.
- Switch on the mains voltage and, if applicable, the DC 24 V supply voltage.

  If you are using the DBG11B keypad, the following message is displayed for approximately 13 s.

```
SELFTEST
MOVIDRIVE
```

- Check that the default parameter settings are correct (e.g. factory setting).
- Check the terminal assignment that has been set (→ P60_).

NOTE

A group of parameter values is **changed automatically** at startup. The description of parameter P700 "Operating modes" explains which parameters are affected by this step. Refer to the MOVIDRIVE® *compact* system manual, section 4 "Parameters", for a **description of the parameters**.

5.3 Startup with the DBG11B keypad

General information

Startup with the DBG11B keypad is only possible **with MCF and MCV/MCH in the VFC operating modes**. Startup in CFC and SERVO operating modes is only possible using the MOVITOOLS® operating software.

Required data

The following data is required to ensure startup is successful:

- Motor type (SEW or non-SEW motor)
- Motor data
  - Rated voltage and rated frequency
  - Additionally for non-SEW motors: rated current, rated power, power factor cosφ and rated speed
- Rated power supply voltage

The encoder type and encoder resolution are required for starting up the speed controller.

SEW encoder type	Startup parameter	
	Encoder type	Encoder resolution
AS1H, ES1H, AV1H	HIPERFACE®	1024
ES1S, ES2S, EV1	SINE ENCODER	1024
ES1R, ES2R, EV1R ES1T[1], ES2T[1], EV1T[1]	INCREM. ENCOD. TTL	1024
ES1C, ES2C, EV1C	INCREM. ENCOD. HTL	1024

1) The DC 5 V TTL sensors ES1T, ES2T and EV1T must be connected via the DWI11A option (→ section Installation).

- Motor data
  - SEW motor: Brake yes or no and flywheel fan yes or no.
  - Non-SEW motor: Mass moment of inertia of motor, brake and fan
- Stiffness of the control system (factory setting = 1; suitable as the initial value for most applications)

  If the drive tends to oscillate → setting < 1

  Transient recovery time is too long → Setting > 1

  Setting range for most applications: 0.70 ... 1 ... 1.40
- Converted mass moment of inertia of the load (gear unit + driven machine) on the motor shaft If the mass moment of inertia of the load cannot be determined → use 1...20 times the value of the mass moment of inertia of the motor.
- Time required for the shortest ramp

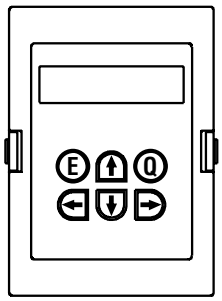
NOTE

If you are using a TTL sensor (encoder type INCREM.ENCODER TTL), sin/cos encoder (encoder type SINE ENCODER):

- Activate encoder monitoring (P504 = "ON") after completing startup. The function and voltage supply of the encoder will then be monitored.
- If a Hiperface® encoder is connected, it is always monitored regardless of the setting of parameter P504. Encoder monitoring is not a safety function!

Startup functions of DBG11B

Detailed description of the keypad → Sec. "Operating displays":



01406AXX

← and → at the same time	Commence startup.
↑ key	Next menu item or next highest value in edit mode.
↓ key	Previous menu item or next lowest value in edit mode.
→ key	Go one menu level lower or enter edit mode of the menu item.
← key	Go one menu level higher or leave edit mode of the menu item.
Q key	Terminate startup and go back to basic display.
E key	Terminate startup and go back to basic display.

Switching the language on the DBG11B keypad

- The keypad is in the basic display.

```
CONTROLLER INHIBIT
CURRENT:       0  A
```

- Press the ↓ key twice. Parameter group 8 is displayed.

```
8..   UNIT
      FUNCTIONS
```

- Press the → key twice and the ↑ key once. Parameter P801 "Language" is displayed. Go to the edit mode by pressing the → key. Use the ↓ or ↑ keys to select the language and leave edit mode by pressing the ← key.

```
801   GERMAN
      LANGUAGE
```

- Press the Q button. The basic display appears.

Structure of the startup menu

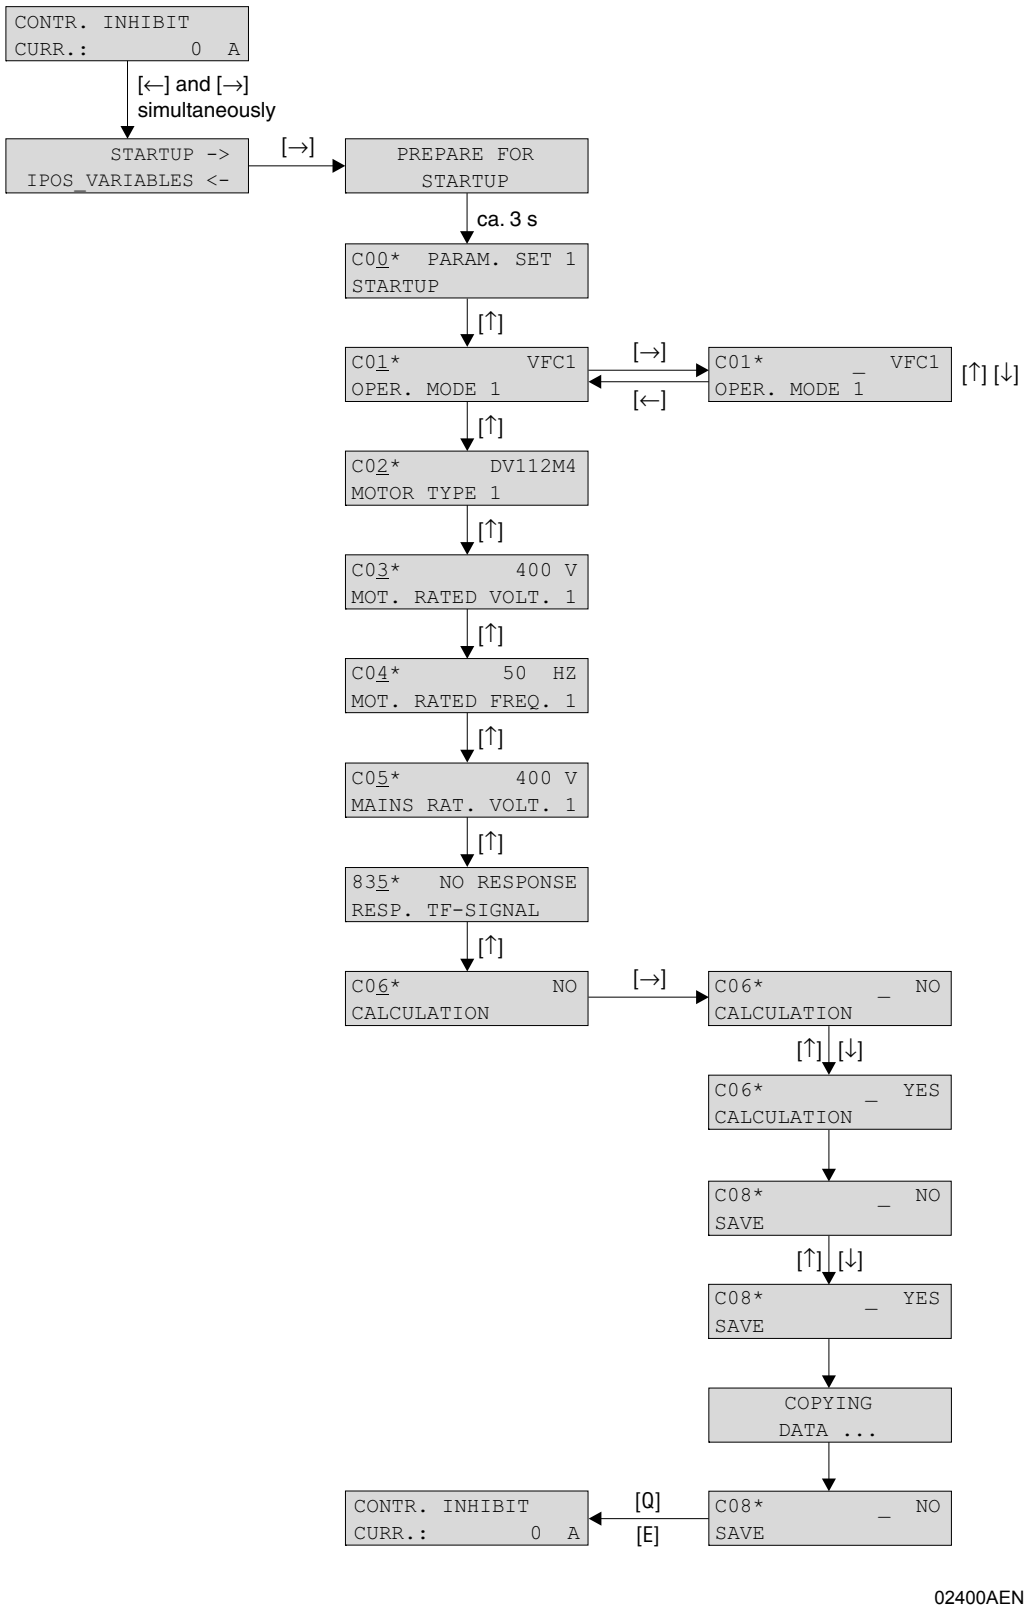


Figure 28: Structure of the startup menu

Startup procedure

1. Enter a "0" signal at terminal DIØØ "/CONTROLLER INHIBIT".

```
CONTROLLER INHIBIT
CURRENT:       0 A
```

2. Activate the startup menu by pressing the ← and → keys on the DBG11B at the same time.

```
STARTUP PARAMET. →
 IPOS_VARIABLES ←
```

3. Press the → key to commence startup. The first window of the startup menu appears. The menu items are indicated with a * as the fourth character. Menu items that only appear in the startup menu start with a *. The other menu items have the number of the parameter list (page 67). Once you have finished with a menu item, use the ↑ key to go to the next menu item.

```
  STARTUP PARAMET.
PREPARE FOR STARTUP
```

4. Select a parameter set, e.g. parameter set 1.

```
C00*  PARAM. SET 1
STARTUP PARAMET.
```

5. Set the operating mode, e.g. VFC1.

```
C01*           VFC1
OPERATING MODE 1
```

6. Select the connected motor. If a 2 or 4-pole SEW motor is connected, select the correct motor from the list. If a non-SEW motor or an SEW motor with more than four poles is connected, select "NON-SEW MOTOR" from the list.

```
C02*        DV112M4
MOTOR TYPE 1
```

```
C02*     NON-SEW
MOTOR
MOTOR TYPE 1
```

7. Enter the rated motor voltage for the selected connection type according to the value specified on the nameplate.

```
C03*        400   V
RATED MOTOR VLTG 1
```

   Example: Nameplate 230Δ/400人 50 Hz
   人 connection → Enter "400 V".
   Δ connection, transition point at 50 Hz → enter "230 V".
   Δ connection, transition point at 87 Hz → Also enter "230 V".
   However, after startup first set parameter P302 "MAXIMUM SPEED 1" to the value for 87 Hz and then start the drive.

   Example: Nameplate 400Δ/690人 50 Hz
   Only Δ connection possible → Enter "400 V".
   人 connection is not possible.

8. Enter the rated frequency specified on the motor nameplate.
   Example: 230Δ/400人 50 Hz
   Enter 50 Hz in 人 and Δ connection.

```
C04*        50    Hz
RATED MOTOR FREQ. 1
```

FOR SEW MOTORS

9. The motor values are stored for SEW 2 and 4-pole motors and need not be entered.

FOR NON-SEW MOTORS

9. Enter the following motor nameplate data:
   - Rated motor current, note the connection type (人 or Δ).
   - Rated power of the motor
   - Power factor cosφ
   - Rated speed of the motor

10. Enter the rated mains voltage.

```
C05*        400   V
RATED MAINS VLTG 1
```

11. If a TF/TH is not connected → set "NO RESPONSE." If a TF/TH is connected, set the required fault response.

```
835*  NO RESPONSE
RESP. TF SIGNAL
```

12. Start the calculation for startup by choosing "YES."

```
C06*        NO
CALCULATION
```

FOR SEW MOTORS

13. The calculation is performed.

FOR NON-SEW MOTORS

13. For non-SEW motors, a calibration process is required to perform the calculation:
    - When prompted, set a "1" signal at terminal DIØØ "/CONTROL.INHIBIT."
    - Enter a "0" signal at terminal DIØØ "/CONTROLLER INHIBIT" after the calibration process is complete.
    - If the motor cannot be calibrated (energized), estimate the motor parameters.

14. The "SAVE" menu command appears automatically. The keypad is already in edit mode.

```
C08*        _NO
SAVE
```

15. Set "SAVE" to "YES". The data (motor parameters) is copied to the non-volatile memory of MOVIDRIVE®.

```
     DATA IS
BEING COPIED...
```

16. The startup procedure is now complete. Leave the startup menu by pressing the E or the Q key. The basic display appears.

```
CONTROLLER INHIBIT
CURRENT:    0  A
```

- After startup is complete, copy the parameter set from MOVIDRIVE® to the DBG11B keypad (P807 "MDX → DBG"). This way, the DBG11B can be used to transfer the parameter set to other MOVIDRIVE® units (P 806 "DBG → MDX").
- Enter parameter settings that differ from the factory setting in the parameter list (→ page 67).
- In the case of non-SEW motors, set the correct brake application time (P732 / P735).
- For starting the motor, refer to the "Starting the motor" section" (→ page 63).
- With Δ connection and transition point at 87 Hz → set parameter P302/312 "Maximum speed 1/2" to the value for 87 Hz.

Starting up the speed controller

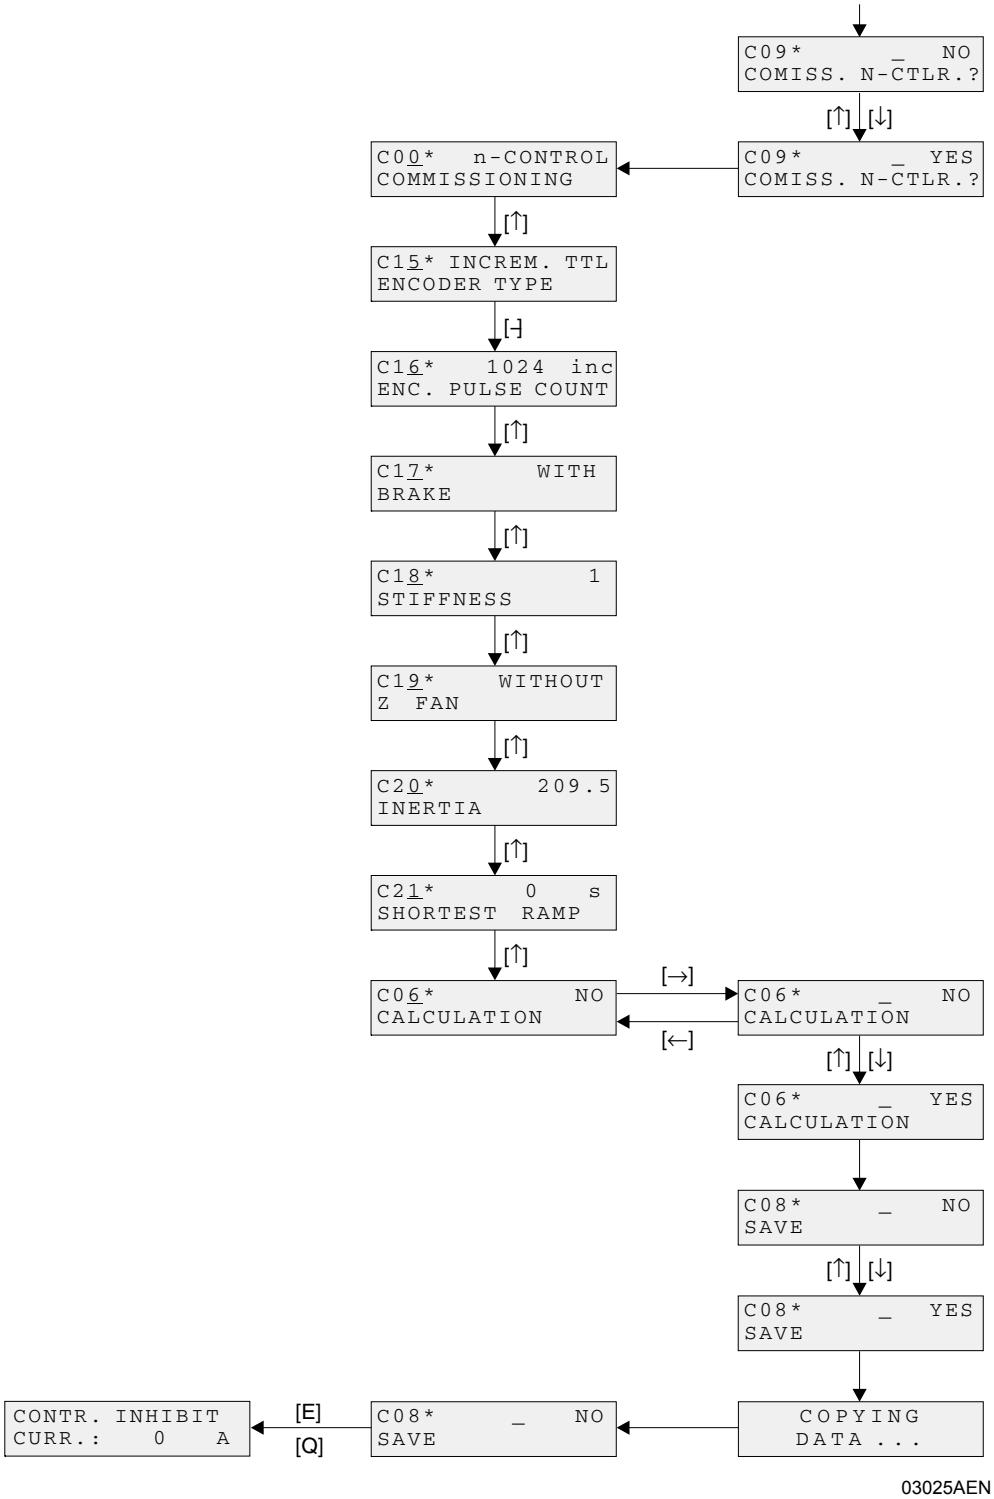
First startup is performed without the speed controller.

Important: Select the VFC-n-CONTROL operating mode.

```
C01*  VFC n-CTRL
OPERATING MODE 1
```

Structure

Structure of the startup menu for the speed controller:



03025AEN

Figure 29: Structure of startup with speed controller

Startup procedure

1. Press "YES" to commence the speed controller startup. All mass moments of inertia must be entered in the unit [10^{-4} kgm^2].
2. Press the ↑ key to move on to the next menu item.
3. Enter the correct encoder type.
4. Enter the correct encoder resolution.

FOR SEW MOTORS

5. Enter whether the motor has a brake.
6. Set the stiffness of the control system.
7. Enter whether the motor has a flywheel fan (Z fan).

FOR NON-SEW MOTORS

5. Enter the moment of inertia of the motor.
6. Set the stiffness of the control system.
7. Set the moment of inertia of the brake and fan.

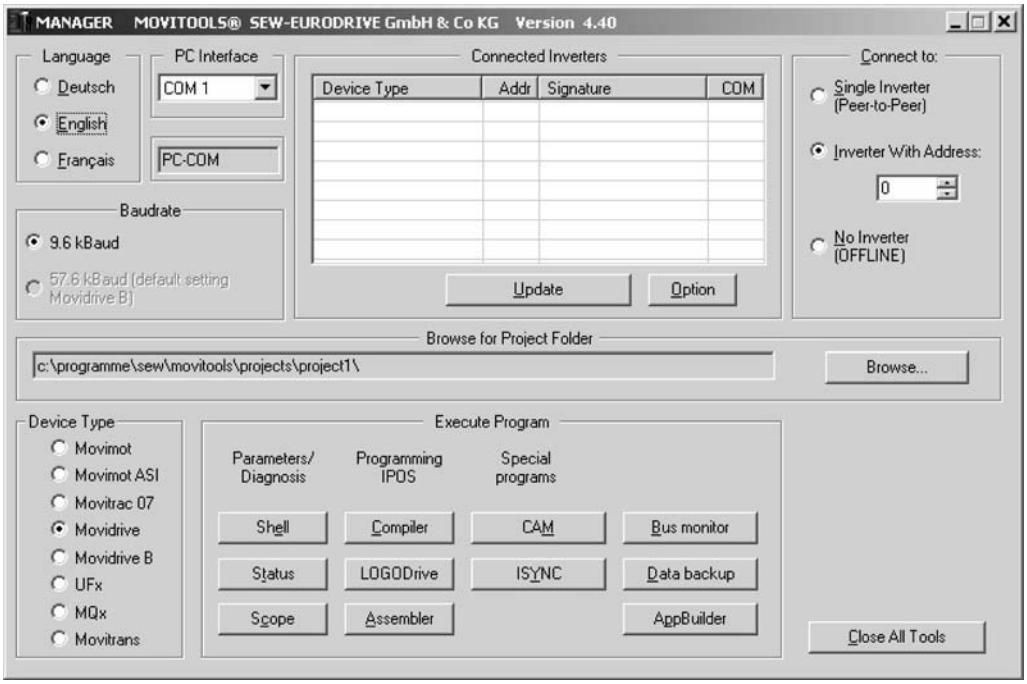
8. Enter the mass moment of inertia of the load (gear unit + driven machine) extrapolated for the motor shaft.
9. Enter the time for the shortest ramp you want.
10. Start the calculation for speed controller startup by choosing "YES."
11. The "SAVE" menu command appears automatically. Set "SAVE" to "YES". The data is copied to the non-volatile memory of MOVIDRIVE®.
12. The "SAVE" menu command appears again. Leave startup by pressing the E or Q button; the basic display appears.

- After startup is complete, copy the parameter set from MOVIDRIVE® to the DBG11B keypad (P807 "MDX → DBG"). This way, the DBG11B can be used to transfer the parameter set to other MOVIDRIVE® units (P 806 "DBG → MDX").
- Enter parameter settings that differ from the factory setting in the parameter list (→ page 67).
- In the case of non-SEW motors, set the correct brake application time (P732 / P735).
- For starting the motor, refer to the "Starting the motor" section" (→ page 63).
- With Δ connection and transition point at 87 Hz → set parameter P302/312 "Maximum speed 1/2" to the value for 87 Hz.
- Activate encoder monitoring for TTL and sin/cos encoders (P504="ON"). **Encoder monitoring** is **not a safety function**.
- If a Hiperface encoder is connected, it is always monitored regardless of the setting of parameter P504.

5.4 Startup with PC and MOVITOOLS®

General information

- Terminal DIØØ "/CONTROLLER INHIBIT" must receive a "0" signal!
- Start MOVITOOLS®.
- Select the language you want in the "Language" selection field.
- From the "PC-COM" drop down menu, select the PC port (e.g. COM 1) to which the inverter is connected.
- In the "Device Type" field, select the option "Movidrive."
- Press the <Update> button to display the connected inverter.



11472AEN

Figure 30: MOVITOOLS® initial screen

Commencing startup

- In the "Execute Program" group box, press the <Shell> button under "Parameters/Diagnosis". The Shell program is started.
- In the Shell program, select the [Startup] / [Startup...] menu command. MOVITOOLS® opens the startup menu. Follow the instructions of the startup assistant. For questions on startup, refer to the MOVITOOLS® online help.

5.5 Starting the motor

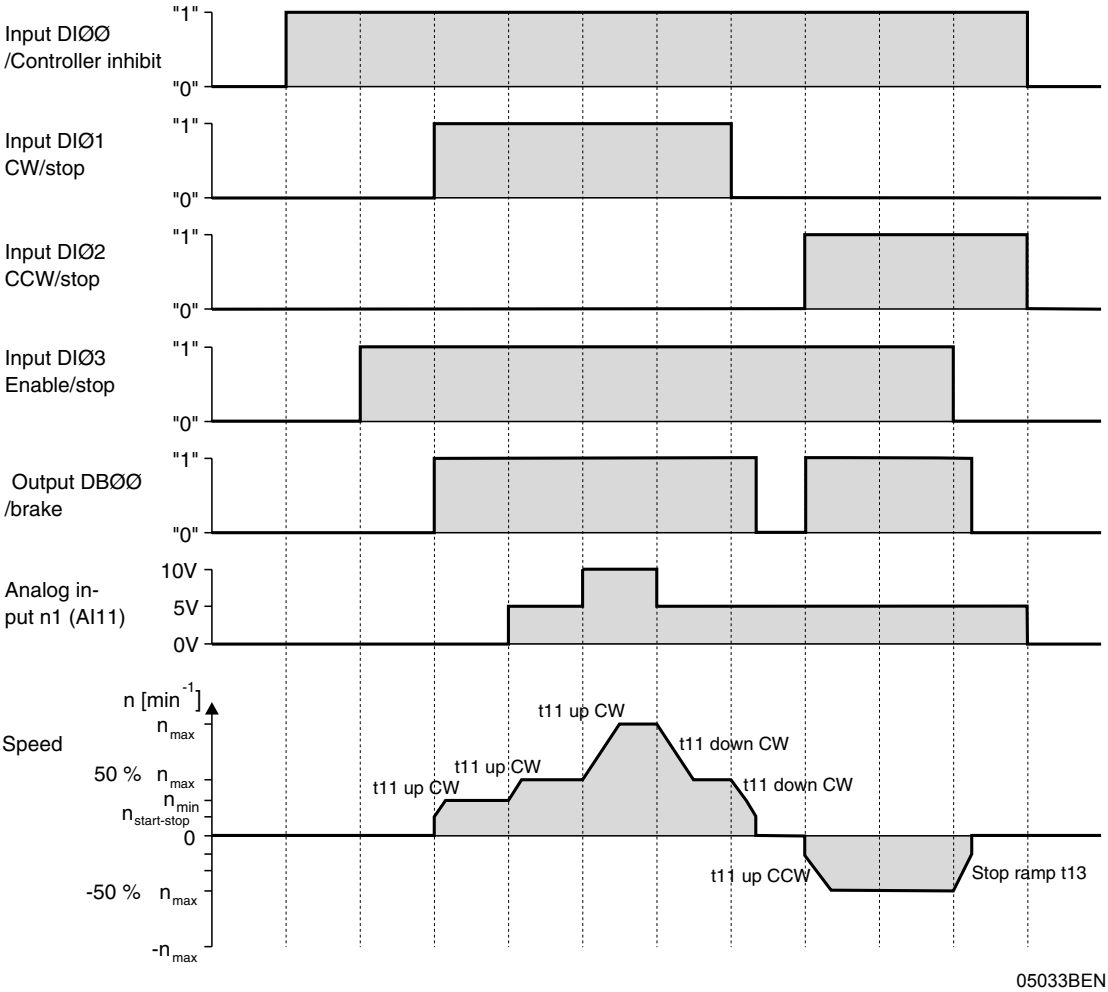
Analog setpoint selection

The following table shows which signals must be present on terminals AI1 and DIØØ...DIØ3 when the "UNIPOL/FIX.SETPT" setpoint (P100) is selected, in order to operate the drive with analog setpoint specification.

Function	AI11 Analog input n1	DIØØ /Controller inhibit	DIØ1 CW/Stop	DIØ2 CCW/Stop	DIØ3 Enable/Stop
Controller inhibit	X	"0"	X	X	X
Stop	X	"1"	X	X	"0"
Enable and stop	X	"1"	"0"	"0"	"1"
Clockwise at 50% n_{max}	5 V	"1"	"1"	"0"	"1"
Clockwise with n_{max}	10 V	"1"	"1"	"0"	"1"
Counterclockwise with 50% n_{max}	5 V	"1"	"0"	"1"	"1"
Counterclockwise with n_{max}	10 V	"1"	"0"	"1"	"1"

Travel diagram

The following travel diagram is an example of how the motor is started with the wiring of terminals DIØØ ... DIØ3 and analog setpoints. Binary input DBØØ "/Brake" is used for switching brake contactor K12.



05033BEN

	NOTE
	The motor is not energized in the event of controller inhibit (DIØØ = "0"). A motor without brake will coast to standstill.

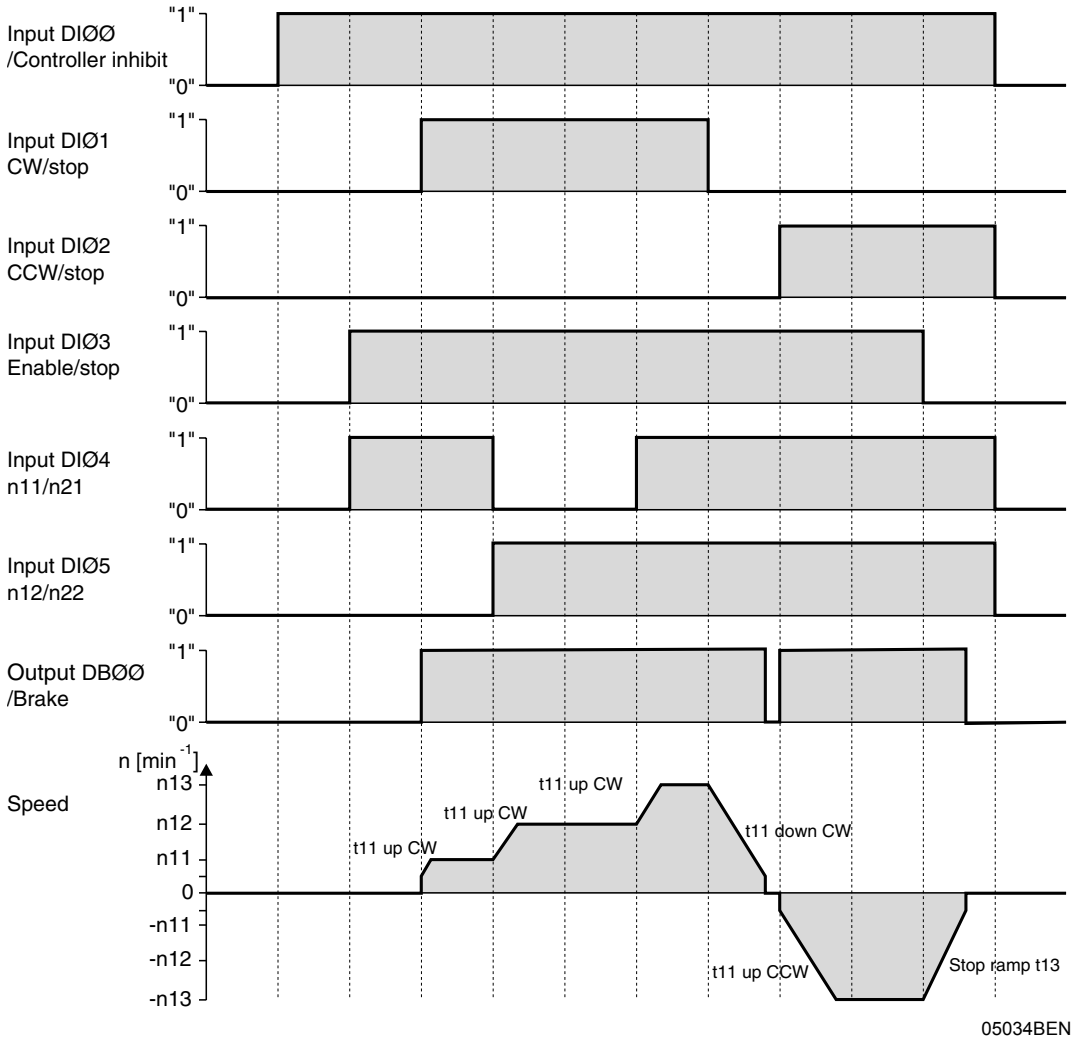
Fixed setpoints

The following table shows which signals must be present on terminals DIØØ ... DIØ5 when the "UNIPOL/FIX.SETPT" setpoint is selected (P100), to operate the drive with the fixed setpoints.

Function	DIØØ /Controller inhibit	DIØ1 CW/Stop	DIØ2 CCW/Stop	DIØ3 Enable/Stop	DIØ4 n11/n21	DIØ5 n12/n22
Controller inhibit	"0"	X	X	X	X	X
Stop	"1"	X	X	"0"	X	X
Enable and stop	"1"	"0"	"0"	"1"	X	X
CW operation with n11	"1"	"1"	"0"	"1"	"1"	"0"
CW operation with n12	"1"	"1"	"0"	"1"	"0"	"1"
CW operation with n13	"1"	"1"	"0"	"1"	"1"	"1"
CCW operation with n11	"1"	"0"	"1"	"1"	"1"	"0"

Travel diagram

The following travel diagram is an example of how the drive is started with the wiring of terminals DIØØ DIØ5 and the internal fixed setpoints. Binary output DBØØ "/Brake" is used for switching brake contactor K12.



05034BEN

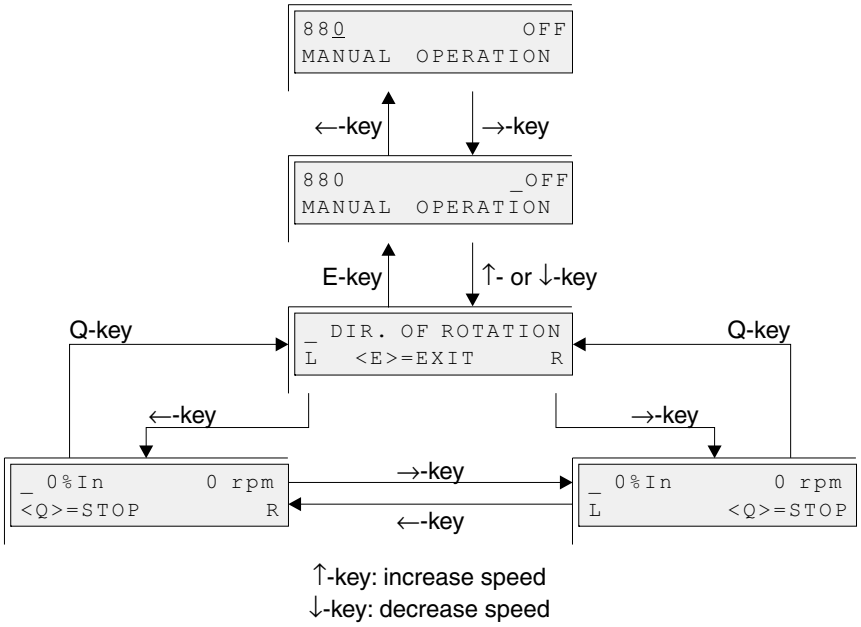
	NOTE
	The motor is not energized in the event of controller inhibit (DIØØ = "0"). A motor without brake will coast to standstill.

Manual operation with DBG11B

The inverter is controlled using the DBG11B keypad with the manual operation function. To start manual operation the inverter must be assigned the status "No enable." The state "No enable" means DIØØ/Controller inhibit = "1" and the binary inputs CW/stop, DIØ2 CCW/stop and DIØ3 Enable/stop with programmed factory settings = "0".

The binary input DIØØ/Controller inhibit is also in effect in manual operation. The other binary inputs are not in effect during manual operation. Binary input DIØØ /Controller inhibit must be assigned a "1" signal to enable the drive to be started in manual operation. The drive can also be stopped in manual operation by setting DIØØ to "0". The direction of rotation is not determined by the "CW/stop" or "CCW/stop" binary inputs. Instead, you select the direction of rotation using the keypad (→ Figure 35).

Manual operation remains active when the power supply is switched off and on; however, the inverter is then inhibited. Setting the direction of rotation with the → key or ← key enables and starts the drive with n_{min} in the selected direction. You can increase and decrease the speed using the ↑ and ↓ keys. The rate of change is 150 1/min per second.



02406AEN

Figure 31: Manual operation with DBG11B

	NOTE
	The signals at the binary inputs take effect as soon as manual operation is finished. Binary input DIØØ"/Controller inhibit" does not have to be switched from "1" to "0" and back to "1". The drive can start according to the signals at the binary inputs and the setpoint sources. Check that the programmed binary inputs DIØ1 CW/stop, DIØ2 CCW/stop and DIØ3 Enable/rapid stop are assigned a "0" signal when you end manual operation.

DANGER!

Risk of crushing if the motor starts up unintentionally.

Severe or fatal injuries.

- Prevent unintentional start up of the motor by implementing the following measure:
  - Connect terminal X10:9 "/CONTROLLER INHIBIT" with X10:15 "DCOM".
- Furthermore, additional safety precautions must be taken depending on the application to avoid injury to people and damage to machinery.

5.6 Complete parameter list

General information

- The parameters of the short menu are marked by a "/" (= display on the DBG11B keypad).
- The factory setting for the parameter is highlighted in bold.

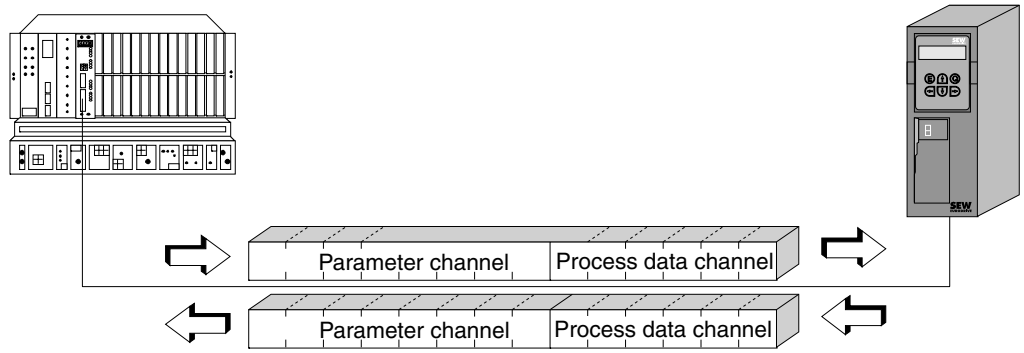
5.7 Starting the inverter with PROFIBUS-DP (MC_41A)

Configuring the PROFIBUS-DP interface

The drive inverter must be given a specific DP configuration by the DP master to define the type and number of input and output data used for transmission. You have the option of

- Controlling the drive using process data
- Reading and writing all drive parameters using the parameter channel

The following figure shows a schematic view of the data exchange between the programmable controller (DP master) and the MOVIDRIVE® drive inverter (DP slave) with the process data and parameter channel.



01065BEN

Figure 32: Communication via PROFIBUS-DP

Process data configuration

MOVIDRIVE® *compact* drive inverters make it possible to have different DP configurations for exchanging data between the DP master and the inverter. The following table provides additional information on all possible DP configurations for the MOVIDRIVE® *compact* range. The "Process data configuration" column shows the name of the configuration. The texts will also be displayed as selection list within the project planning software for the DP master. The DP configurations column shows which configuration data is sent to the inverter when the PROFIBUS DP connection is being established.

Process Data Configuration	Meaning / notes	DP Configuration	
		0	1
1 PD	Control via one process data word	240_{dec}	-
2 PD	Control via 2 process data words	241_{dec}	-
3 PD	Control via 3 process data words	242_{dec}	-
6 PD	Control via 6 process data words	0_{dec}	245_{dec}
10 PD	Control via 10 process data words	0_{dec}	249_{dec}
Param + 1 PD	Control via one process data word Parameter setting via 8 byte parameter channel	243_{dec}	240_{dec}
Param + 2 PD	Control via 2 process data words Parameter setting via 8 byte parameter channel	243_{dec}	241_{dec}
Param + 3 PD	Control via 3 process data words Parameter setting via 8 byte parameter channel	243_{dec}	242_{dec}
Param + 6 PD	Control via 6 process data words Parameter setting via 8 byte parameter channel	243_{dec}	245_{dec}
Param + 10 PD	Control via 10 process data words Parameter setting via 8 byte parameter channel	243_{dec}	249_{dec}

DP Configuration "Universal-Configuration"

Selecting the "Universal configuration" DP configuration gives you two DP identifiers defined as 'blank spaces' (often also referred to as DP modules) with the entry 0_{dec}. You can then configure these identifiers individually observing the following peripheral conditions:

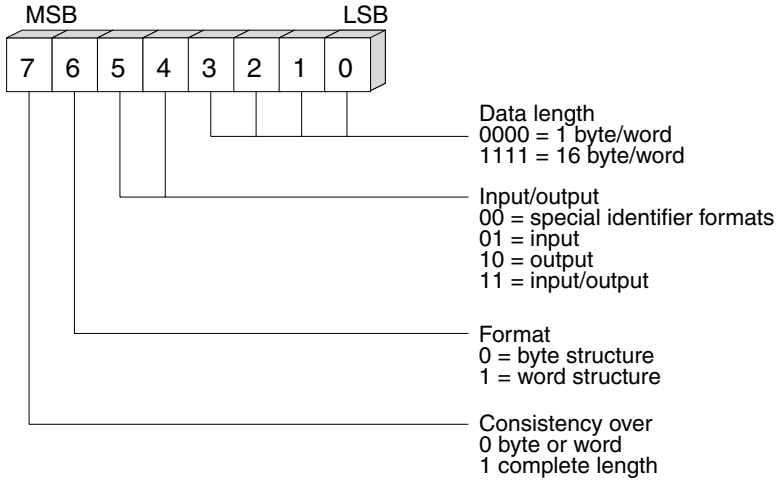
Module 0 (DP identifier 0) defines the parameter channel of the inverter:

Length	Function
0	Parameter channel deactivated
8 bytes or 4 words	Parameter channel is used

Module 1 (DP identifier 1) defines the process data channel of the inverter:

Length	Function
2 bytes or 1 word	1 process data word
4 bytes or 2 words	2 process data words
6 bytes or 3 words	3 process data words
12 bytes or 6 words	6 process data words
20 bytes or 10 words	10 process data words

The following figure shows the structure of the configuration data defined in IEC 61158. These configuration data are transmitted to the inverter during the initial start of the DP master.



00087BEN

Figure 33: Format of the identifier byte Cfg_Data to IEC 61158

NOTE

Observe for MCF/MCV/MCS41A (does not apply to MCH41A):

The "special identifier formats" coding is not supported. Only use the setting “Integrity over entire length” for data transmission!

Data consistency

Consistent data is data that has to be transmitted between the programmable controller and the drive inverter as one block at all times and must never be transmitted separately.

Data consistency is especially important for transmitting position values or complete positioning tasks. This is because data that is not transmitted consistently could be from different program cycles of the programmable controller, which would lead to undefined values being transmitted to the drive inverter.

For PROFIBUS DP, data communication between the programmable controller and drive engineering devices is usually carried out with the setting “Data integrity over entire length.”

External diagnostics

For MOVIDRIVE® *compact*, it is possible to activate automatic generation of external diagnostic alarms via PROFIBUS-DP during the project planning in the DP master. If this function has been activated, MOVIDRIVE® *compact* sends an external diagnostic signal to the DP master every time a malfunction occurs. You then have to program corresponding algorithms in the program of the DP master system to evaluate the diagnostic information. These algorithms can be quite complex.

Recommendation

In principle, it is not necessary to activate the external diagnostic function because MOVIDRIVE® *compact* transmits the current drive status in status word 1 during every PROFIBUS-DP cycle.

Information on Simatic S7 Master systems

Diagnostic alarms may also be triggered by the PROFIBUS DP system in the DP master even if external diagnostic generation is deactivated. As a result, the corresponding operating blocks (e.g. OB84 for S7-400 or OB82 for S7-300) should always be created in the controller.

See the Read-me file in the GSD file for additional information.

Ident number

Each DP master and DP slave must have its individual ident number which is assigned by the PROFIBUS users’ organization. This ident number is used for uniquely identifying the connected unit. When the PROFIBUS DP master is started up, it compares the ident numbers of the connected DP slaves with the ident numbers configured by the user. The user data transfer will only be activated after the DP master has ensured that the connected station addresses and device types (ident numbers) correspond to the project planning data. This procedure achieves a high degree of safety with respect to project planning errors.

The ident. number is defined as an unsigned 16-bit number (Unsigned16). The PROFIBUS users’ organization has defined the following identity numbers for the MOVIDRIVE® *compact* driver inverter series:

- MOVIDRIVE® compact MCF/MCV/MCS41A → 6002_{hex} (24578_{dec})
- MOVIDRIVE® compact MCH41A → 6003_{hex} (24579_{dec})

Control via PROFIBUS-DP

The inverter is controlled via the process data channel which is one, two or three I/O words in length. These process data words may be mapped in the I/O or peripheral area of the controller if a programmable controller is used as DP master and can be addressed as usual (see following figure).

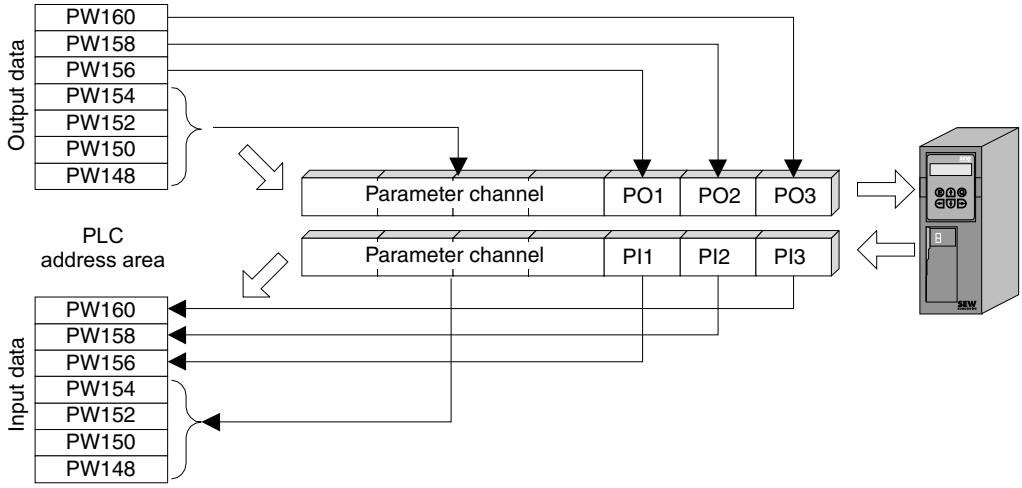


Figure 34: Assignment of the I/O area in the PLC

Control example for Simatic S5

While the process input data (actual values) for a Simatic S5 may be read in via load commands, the process output data (setpoints) can be sent with transfer commands. Based on Figure 34, the example shows the syntax for processing of the process input and output data of the MOVIDRIVE® drive inverter. The factory setting for the process data channel is displayed in the comment.

STEP5 sample program

In the example, the MOVIDRIVE® unit is configured using the "3 PD" process data configuration to the input addresses PW156 ... 161 and output addresses PW156 ... 161. The consistent access may take place in the sequence "Last byte first".

The CPU type will mainly determine data consistency in Simatic S5. You will find further information on correct programming with data consistency in the manuals on CPU or DP master components in Simatic S5.

```
//Consistent input of actual values
    L PW 160        //Load PI3 (no function)
    L PW 158        //Load PI2 (actual speed value)
    L PW 156        //Load PI1 (status word 1)

//Consistent output of setpoints
L   KH 0
T PW 160        Write //0hex to PO3 (without function)

L KF +1500
T PW 158        Write //1500dec to PO2 (speed setpoint = 300 1/min)

L   KH 0006
T PW 156        Write //6hex to PO1 (control word = enable)
```

Control example for Simatic S7

The drive inverter is controlled using Simatic S7 in accordance with the selected process data configuration either directly using load and transfer commands or by means of special system functions SFC 14 DPRD_DAT and SFC15 DPWR_DAT.

In principle, S7 data lengths of 3 bytes or more than 4 bytes must be transmitted using system functions SFC14 and SFC15. Consequently, the data in the following table applies:

Process data configuration	Program access
1 PD	Load / transfer commands
2 PD	Load / transfer commands
3 PD	System functions SFC14/15 (length 6 bytes)
6 PD	System functions SFC14/15 (length 12 bytes)
10 PD	System functions SFC14/15 (length 20 bytes)
Param + 1 PD	Parameter channel: System functions SFC14/15 (length 8 bytes) Process data: Load / transfer commands
Param + 2 PD	Parameter channel: System functions SFC14/15 (length 8 bytes) Process data: Load / transfer commands
Param + 3 PD	Parameter channel: System functions SFC14/15 (length 8 bytes) Process data: System functions SFC14/15 (length 6 bytes)
Param + 6 PD	Parameter channel: System functions SFC14/15 (length 8 bytes) Process data: System functions SFC14/15 (length 12 bytes)
Param + 10 PD	Parameter channel: System functions SFC14/15 (length 8 bytes) Process data: System functions SFC14/15 (length 20 bytes)

STEP7 example program

In this example, the project planning for MOVIDRIVE® *compact* has the process data configuration "3 PD" at input addresses PIW576... and output addresses POW576.... A data block DB3 is created with about 50 data words.

When SFC14 is called, the process input data is copied to data block DB3, data words 0, 2 and 4. When SFC15 is called after the control program has been processed, the process output data are copied from data words 20, 22 and 24 to the output address POW 576 ...

Note the length information in bytes for the RECORD parameter. The length information must correspond to the configured length.

Refer to the online help for STEP7 for further information about the system functions.

```

NOTE

For further information and sample applications regarding control via the process data channel, especially coding of the control and status word, see the manual on the fieldbus unit profile, which you can order from SEW.

Parameter setting using PROFIBUS-DP

With PROFIBUS-DP, the drive parameters are accessed via the MOVILINK® parameter channel. This channel offers extra parameter services in addition to the conventional READ and WRITE services.

Structure of the parameter channel

To set the parameters of peripheral units via fieldbus systems that do not provide an application layer, it is necessary to emulate the most important functions and services such as READ and WRITE for reading and writing parameters. You will have to define a parameter process data object (PPO) for PROFIBUS-DP. This PPO is transmitted cyclically. In addition to the process data channel, it contains a parameter channel by means of which acyclical parameter values can be exchanged (→ Figure 35).

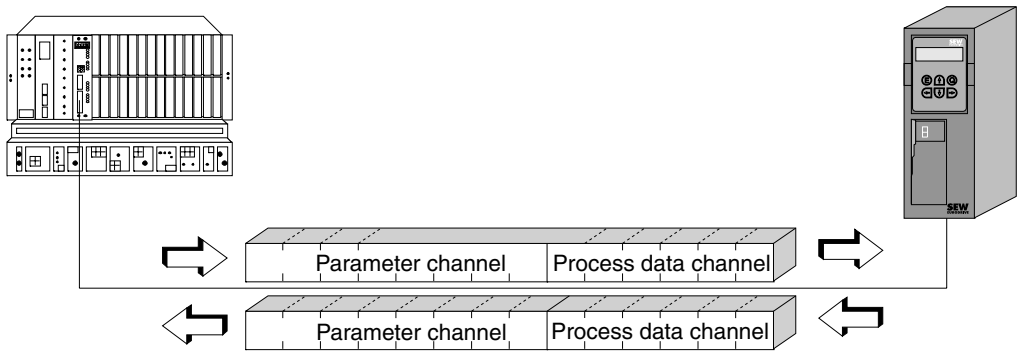

Figure 35: Parameter process data object for PROFIBUS-DP

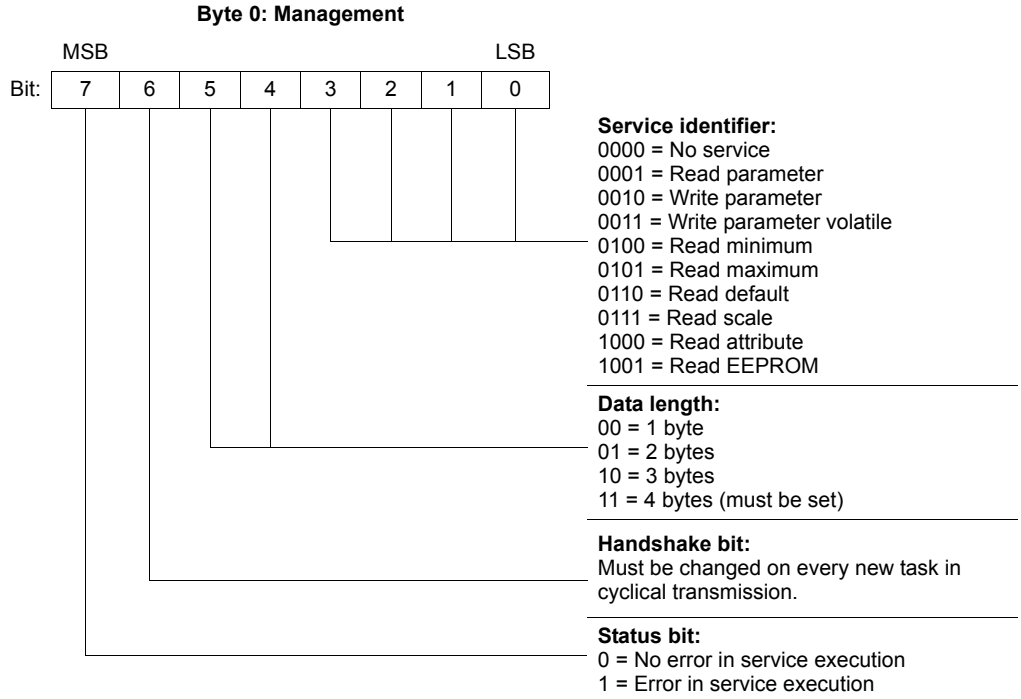
The following structure shows the parameter channel. In principle, the parameter channel is made up of a management byte, an index word, a reserved byte and four data bytes.

Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
Management	Reserved	Index high	Index low	MSB data	Data	Data	LSB data
		Parameter index			4-byte data		

Management of the parameter channel

The entire procedure for setting parameters is coordinated with "Byte 0: Management". This byte provides important service parameters such as service identifier, data length, version and status of the service performed. Bits 0, 1, 2 and 3 contain the service identifier. These bits determine which service is to be executed. Bit 4 and bit 5 specify the data length in bytes for the write service; it should be set to 4 bytes for all SEW drive inverters.



Bit 6 is used as an acknowledgment between the controller and the drive inverter. It triggers the execution of the transmitted service in the drive inverter. In PROFIBUS-DP the parameter channel is transmitted cyclically with the process data. For this reason, the implementation of the service in the drive inverter must be triggered by edge control using the handshake bit 6. For this purpose, the value of this bit is altered (toggled) for each new service that is to be executed. The drive inverter uses the handshake bit to signal whether the service has been executed or not. The service was executed if the handshake bit received in the controller is identical with the transmitted handshake bit. Status bit 7 indicates whether it was possible to execute the service properly or if errors occurred.

Index addressing

"Byte 2: Index high" and "Byte 3: Index low" determine the parameter read or written via the fieldbus system. The parameters of a drive inverter are addressed with a uniform index regardless of the connected fieldbus system. Byte 1 should be viewed as reserved and must always be set to 0x00.

Data range

The data is located in byte 4 to byte 7 of the parameter channel. This means up to 4 bytes of data can be transmitted per service. The data is always entered with right-justification; that is, byte 7 contains the least significant data byte (Data LSB) whereas byte 4 is the most significant data byte (Data MSB).

Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
Management	Reserved	Index high	Index low	MSB data	Data	Data	LSB data
				High byte 1	Low byte 1	High byte 2	Low byte 2
				High word		Low word	
				Double word			

Incorrect execution of a service

The status bit in the management byte is set to signal that a service has been executed incorrectly. If the received handshake bit is identical to the transmitted handshake bit, the drive inverter has executed the service. If the status bit now signals an error, the error code is entered in the data range of the parameter telegram. Bytes 4 through 7 provide the return code in a structured format (→ section "Return codes of parameter setting" on page 83).

Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
Management	Reserved	Index high	Index low	**Error class**	**Error code**	**Add. code high**	**Add. code low**

↓

Status bit = 1: Incorrect performance of service

Return codes for parameter setting

In the event of an incorrect parameter setting, the drive inverter sends back various return codes to the master that set the parameters. These codes provide detailed information about what caused the error. All of these return codes are structured in accordance with IEC 61158. The MQI distinguishes between the following elements:

- Error class
- Error code
- Additional code

These return codes apply to all communication interfaces of MOVIDRIVE®.

Error class

The error class element provides a more exact classification of the error type. MOVIDRIVE® *compact* supports the following error classes defined to IEC 61158:

Class (hex)	Designation	Meaning
1	vfd state	Status error of the virtual field device
2	application reference	Error in application program
3	definition	Definition error
4	resource	Resource error
5	service	Error during execution of service
6	access	Access error
7	ov	Error in the object list
8	other	Other error (see additional code)

The error class is generated by the communication software of the fieldbus gateway if there is an error in communication, with the exception of error class 8 = "Other error". Return codes sent from the drive inverter system are all included in "Error class 8 = Other error". The error can be identified more precisely using the additional code element.

Error code

The error code element provides a means for more precisely identifying the cause of the error within the error class. It is generated by the communication software of the fieldbus interface in the event of an error in communication. Only error code 0 (Other error code) is defined for error class 8, "Other error". In this case, detailed identification is available in the additional code.

Additional code

The additional code contains SEW-specific return codes for incorrect parameter setting of the drive inverter. They are returned to the master under Error Class 8 = "Other Error". The following table shows all possible codings for the additional code.

Error class: 8 = "Other error"

Add. code high (hex)	Add. code low (hex)	Meaning
00	00	No error
00	10	Illegal parameter index
00	11	Function / parameter not implemented
00	12	Read access only
00	13	Parameter lock is active
00	14	Factory setting is active
00	15	Value for parameter too large
00	16	Value for parameter too small
00	17	Required option card missing for this function/parameter
00	18	Error in system software
00	19	Parameter access via RS-485 process interface on X13 only
00	1A	Parameter access via RS-485 diagnostic interface only
00	1B	Parameter is access-protected
00	1C	Controller inhibit required
00	1D	Invalid value for parameter
00	1E	Factory setting was activated
00	1F	Parameter was not saved in EEPROM
00	20	Parameter cannot be changed with enabled output stage

Special return codes (special cases)

Errors in parameter settings, which cannot be identified either automatically by the application layer of the fieldbus system or by the system software of the drive inverter, are treated as special cases. The possible causes for such errors are as follows:

- Incorrect coding of a service via parameter channel
- Incorrect length specification of a service via parameter channel
- Internal communication error

Incorrect service code in the parameter channel

Incorrect code was specified in the management byte or reserved byte during parameter setting via the parameter channel. The following table shows the return code for this special case.

	Code (dec)	Meaning
Error class:	5	Service
Error code:	5	Illegal parameter
Add. code high:	0	-
Add. code low:	0	-

Correcting the error:

Check bits 0 and 1 in the parameter channel.

Incorrect length specification in parameter channel

A data length other than 4 data bytes was specified in a write service during configuration via the parameter channel. The following table displays the return codes.

	Code (dec)	Meaning
Error class:	6	Access
Error code:	8	Type conflict
Add. code high:	0	-
Add. code low:	0	-

Correcting the error:

Check bit 4 and bit 5 for the data length in the management byte of the parameter channel.

Internal communication error

The return code listed in the following table is sent back if a communication error has occurred within the system. The requested parameter service may not have been performed and should be repeated. If this error occurs again, switch off the drive inverter completely and then back on again so it is re-initialized.

	Code (dec)	Meaning
Error class:	6	Access
Error code:	2	Hardware fault
Add. code high:	0	-
Add. code low:	0	-

Correcting the error:

Repeat the parameter service. If the error occurs again, switch the drive inverter off and back on again (mains voltage + ext. DC 24 V). Contact SEW Service for advice if this error occurs continuously.

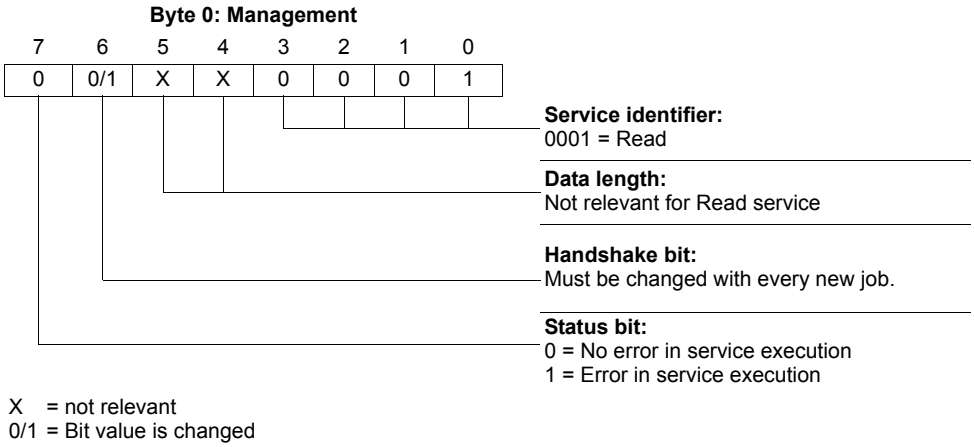
Reading a parameter via PROFIBUS-DP (Read)

To execute a READ service via the parameter channel, due to the cyclical transfer of the parameter channel, the handshake bit may be changed only after the complete parameter channel has been set up for the specific service. As a result, adhere to the following sequence when reading a parameter:

1. Enter the index of the parameter to be read in byte 2 (Index high) and byte 3 (Index low).
2. Enter the service identifier for the Read service in the management byte (byte 0).
3. Transfer the read service to the inverter by changing the handshake bit.

Since this is a read service, the sent data bytes (bytes 4 ... 7) and the data length (in the management byte) are ignored and do not need to be set.

The inverter now processes the read service and sends back the service confirmation by changing the handshake bit.



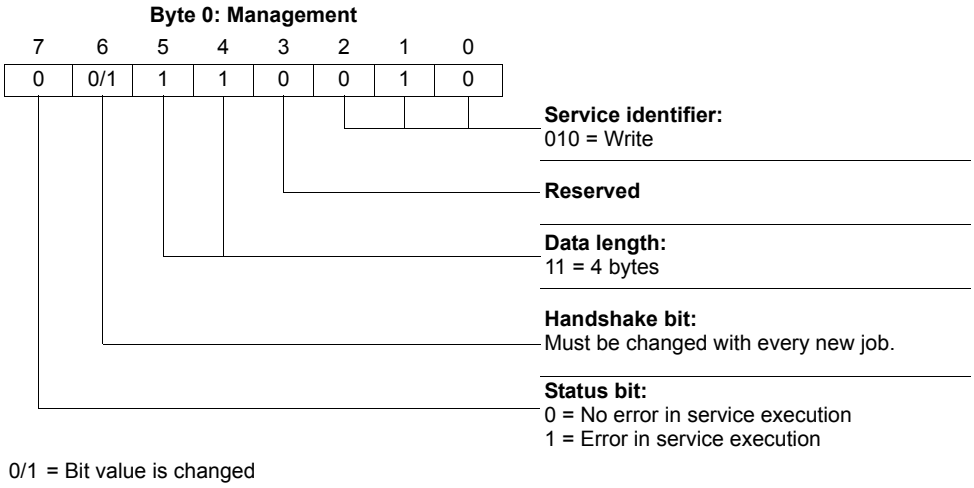
The data length is not relevant, you only need to enter the service identifier for the READ service. This service is now activated in the drive inverter when the handshake bit changes. It would be possible to activate the read service with the management byte coding 01_{hex} or 41_{hex}.

Writing a parameter via PROFIBUS-DP (Write)

To execute a WRITE service via parameter channel, the handshake bit may be changed only after the complete parameter channel has been prepared according to the service because of the cyclical transfer of the parameter channel. Observe the following sequence when writing a parameter:

1. Enter the index of the parameter to be written in byte 2 (Index high) and byte 3 (Index low).
2. Enter the data to be written in bytes 4... 7.
3. Enter the service identifier and the data length for the Write service in the management byte (byte 0).
4. Transfer the Write service to the inverter by changing the handshake bit.

The inverter now processes the Write service and sends back the service confirmation by changing the handshake bit.



0/1 = Bit value is changed

The data length is 4 bytes for all parameters of SEW drive inverters. This service is now transferred to the drive inverter when the handshake bit changes. This means a Write service to SEW drive inverters generally has the management byte coding 32_{hex} or 72_{hex}.

Programming with PROFIBUS-DP

Taking the example of the WRITE service, the following figure represents a process of setting parameters between the controller and the drive inverter via PROFIBUS-DP (→ Figure 36). To simplify the process, only the management byte of the parameter channel is displayed in Figure 36.

The parameter channel is only received and returned by the drive inverter while the controller is preparing the parameter channel for the Write service. The service is not activated until the moment when the handshake bit is changed (in this example, when it changes from 0 to 1). The drive inverter now interprets the parameter channel and processes the write service, but continues to answer all messages with handshake bit = 0. The executed service is acknowledged with a change of the handshake bit in the response message of the drive inverter. The controller now detects that the received handshake bit is once again the same as the one which was sent. It can now prepare another parameter setting procedure.

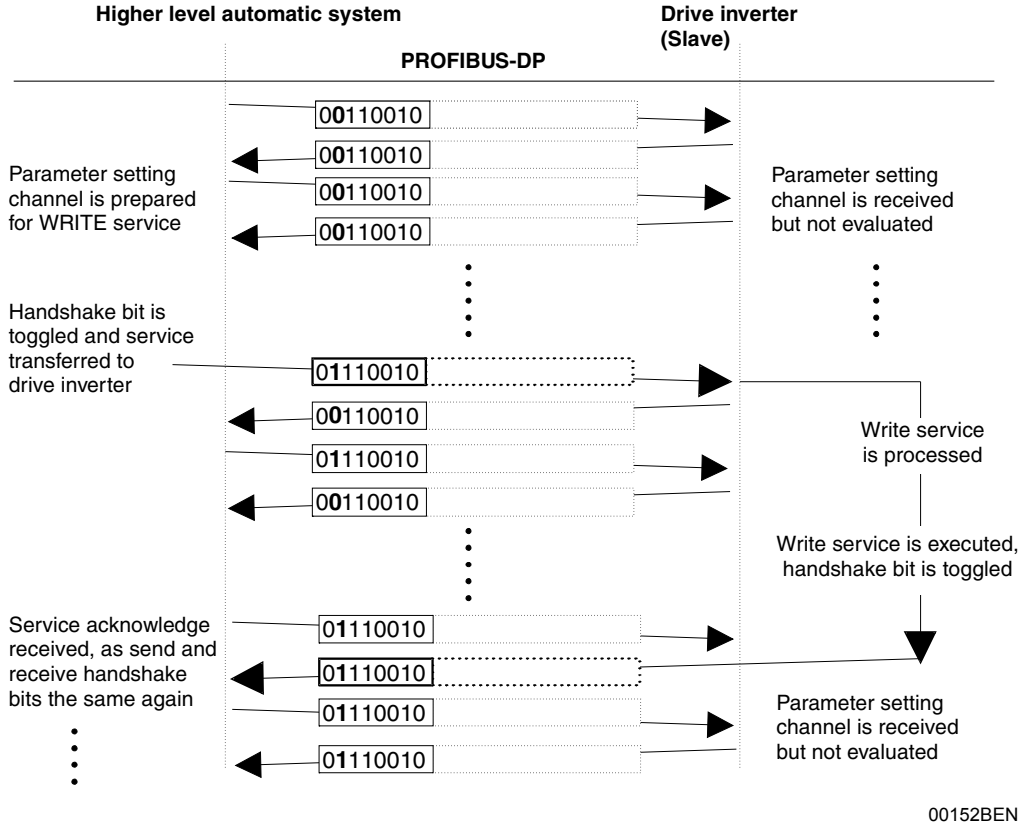


Figure 36: Parameter setting procedure

Parameter data format

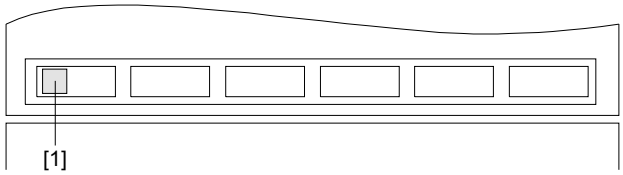
When parameters are set via the fieldbus interface, the same parameter coding is used as with the serial RS485 interfaces or the system bus.

The data formats and value ranges for the individual parameters are listed in the "MOVIDRIVE® Serial Communication" manual available from SEW.

6 Operation

6.1 Operating displays for MC_40A (without fieldbus)

The operating status of MOVIDRIVE® *compact* MC_40A is displayed on LED V1.



05428BXX

Figure 37: MOVIDRIVE® compact MC_40A operating display

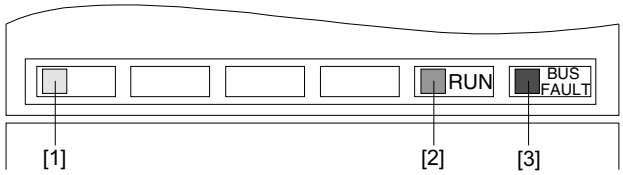
[1] Operation LED V1 (three colors: green/red/yellow)

Operation LED V1 The operating status of MOVIDRIVE® *compact* MC_40A are displayed by the three-color LED V1 (green/red/yellow).

Color		Operating state	Description
-	**OFF**	Without voltage	No supply voltage and no DC 24 V backup voltage.
Yellow	**Steady light**	Controller inhibit or No enable	Unit ready but controller inhibit active (DIØØ = "0") or no enable.
Green	**Steady light**	Enable	Motor is energized.
Red	**Steady light**	Locking system error	Error causes unit to disconnect.
Yellow	**Flashing**	Unit not ready	Factory setting in progress or DC 24 V backup mode without supply voltage.
Green	**Flashing**	Flying start in process	Operating mode VFC & FLYING START is set and inverter connected to a rotating motor.
Green/red	**Flashing** **0.5 s green / 0.5 s red**	Limit switch contacted	Limit switch reached in "enable" operating status.
Yellow/red	**Flashing** **0.5 s yellow / 0.5 s red**	Limit switch contacted	Limit switch reached in "Controller inhibit" operating status.
Green/red	**Flashing** **green green red red**	Display or wait system error	Fault in "enable" operating status. Fault is only displayed and does not lead to a switch-off.
Yellow/red	**Flashing** **yellow yellow red red**	Display or wait system error	Fault in "controller inhibit" operating status. Fault is only displayed and does not lead to a switch-off.
Green/yellow	**0.75 s green /** **0.75 s yellow**	Timeout active	Enable ineffective, inverter is waiting for a valid telegram.

6.2 Operating displays for MC_41A (PROFIBUS-DP)

The operating status of MOVIDRIVE® *compact* MC_41A is displayed on the following LEDs.



02902BXX

Figure 38: MOVIDRIVE® compact MC_41A operating displays

[1] Operation LED V1 (three colors: green/red/yellow)

[2] PROFIBUS-DP LED "RUN" (green)

[3] PROFIBUS-DP LED "BUS-FAULT" (red)

Operation LED V1

The operating status of MOVIDRIVE® *compact* MC_41A are displayed by the three-color LED V1 (green/red/yellow).

Color		Operating state	Description
-	**OFF**	Without voltage	No supply voltage and no DC 24 V backup voltage.
Yellow	**Steady light**	Controller inhibit or No enable	Unit ready but controller inhibit active (DIØØ = "0") or no enable.
Green	**Steady light**	Enable	Motor is energized.
Red	**Steady light**	Locking system error	Error causes unit to disconnect.
Yellow	**Flashing**	Unit not ready	Factory setting in progress or DC 24 V backup mode without supply voltage.
Green	**Flashing**	Flying start in process	Operating mode VFC & FLYING START is set and inverter connected to a rotating motor.
Green/red	**Flashing 0.5 s green / 0.5 s red**	Limit switch contacted	Limit switch reached in "enable" operating status.
Yellow/red	**Flashing 0.5 s yellow / 0.5 s red**	Limit switch contacted	Limit switch reached in "Controller inhibit" operating status.
Green/red	**Flashing green green red red**	Displaying or waiting system error	Fault in "enable" operating status. Fault is only displayed and does not lead to a switch-off.
Yellow/red	**Flashing yellow yellow red red**	Displaying or waiting system error	Fault in "controller inhibit" operating status. Fault is only displayed and does not lead to a switch-off.
Green/yellow	**0.75 s green / 0.75 s yellow**	Timeout active	Enable ineffective, inverter is waiting for a valid telegram.

PROFIBUS-DP LEDs

The "RUN" LED (green) indicates that the bus electronics are operating correctly. The "BUS FAULT" LED (red) displays PROFIBUS-DP errors.

RUN	BUS FAULT	Meaning
ON	**ON**	Connection to the DP master has failed; check bus connection. Unit cannot detect a baud rate, check setting in DP master. Bus interruption or DP master out of order.
ON	**OFF**	Unit is currently exchanging data with the DP master (data exchange).
ON	**FLASHES**	Unit has detected the baud rate, but is not addressed by DP master. Set the unit address (P092) and the address in the project planning software of the DP master to the same value. Unit was not configured in DP master or configured incorrectly. Check project planning, use GSD file SEW_6002.GSD.
OFF	**-**	Hardware fault in bus electronics. Switch unit off/on; contact SEW service if the error occurs again.
FLASHES	**-**	PROFIBUS address set to a value greater than 125. Set address ≤ 125.

6.3 DBG11B keypad

Basic displays

CONTROLLER INHIBIT CURRENT: 0 A	Display when X11:1 (DIØØ "/CONTROLLER INHIBIT") = "0".
NO ENABLE CURRENT: 0 A	Display for X11:1 (DIØØ "/CONTROLLER INHBIT") = "1" and disabled inverter ("ENABLE/STOP" = "0").
SPEED 942 1/min CURRENT: 2.51 A	Display for enabled inverter.
NOTE XX XXXXXXXXXXXXXXXXXX	Information message
FAULT XX XXXXXXXXXXXXXXXXXX	Error display

DBG11B copy function

You can use the DBG11B keypad to copy parameter sets from one MOVIDRIVE® unit to other MOVIDRIVE® units. To do so, copy the parameter set to the keypad with P 807 (MD_ → DBG). Plug the keypad into another MOVIDRIVE® unit and copy the parameter set with P 806 (DBG → MD_) onto the unit. You can plug in or remove the keypad during operation.

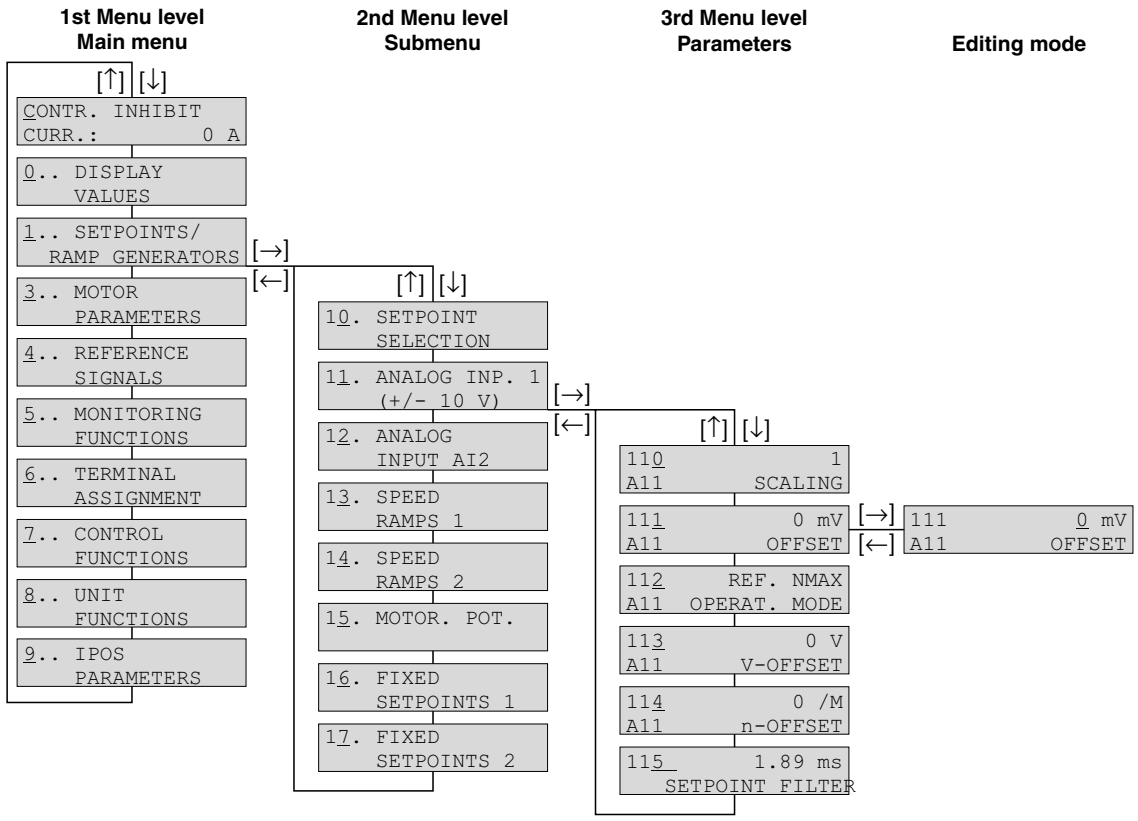
No connection between inverter and DBG11B

If a connection cannot be established with the keypad once the mains power has been switched on or the DC 24 V supply connected, one of the following fault messages can appear:

COMMUNIC. ERROR NO SERIAL LINK	There may also be a fault in the MOVIDRIVE® unit
ERROR WHILE COPY FLASH ERR. XX	Error in the DBG11B keypad
FATAL ERROR! CODE CRC WRONG	

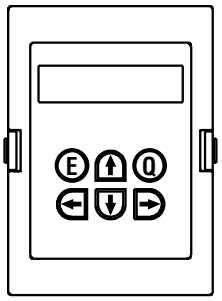
Try to establish the connection by removing the keypad and plugging it in again. If you cannot establish a connection, send the unit (DBG11B keypad, maybe also MOVIDRIVE®) to SEW-EURODRIVE for repair or replacement.

Selected via menu



02407AEN

Figure 39: Menu structure

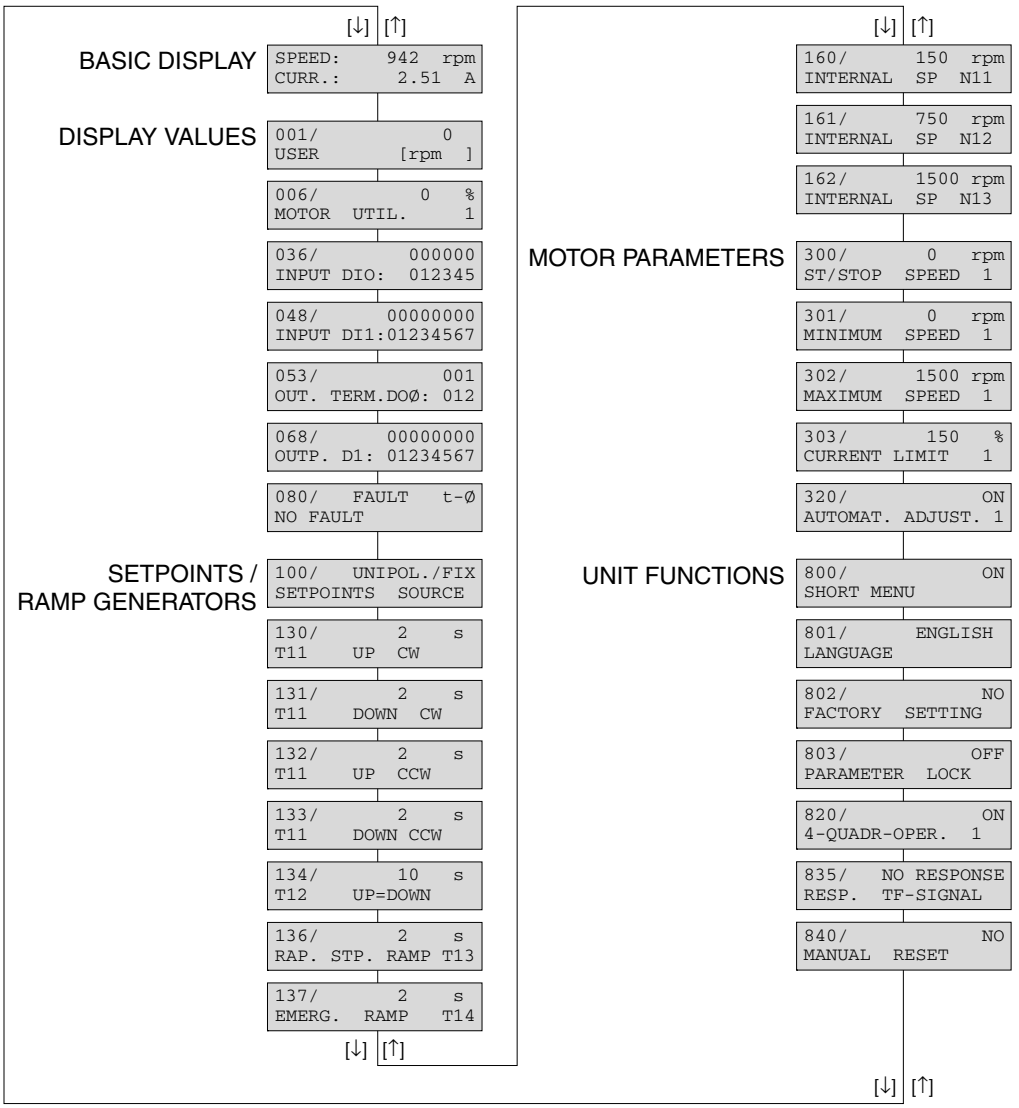


01406AXX

← or → key	Change the menu level, in the 3rd menu level (parameter), enter (→) or leave (←) the edit mode. The parameter can only be changed in edit mode. Pressing the ← and → keys at the same time, triggers startup (→ Sec. "Startup").	
↑ or ↓ key.	Select the menu item; in edit mode, select higher or lower value. The new value takes effect when you release the ↑ or ↓ key in edit mode.	
Q key	Back to the basic display; in startup mode, startup is terminated.	
E key	Startup:	Termination of startup
	Normal operation:	Signature is displayed; the signature can only be entered or changed using MOVITOOLS/SHELL. It is used to identify the parameter set or the unit.
	Manual operation:	Leave manual mode
	In case of malfunction:	Reset parameter P840 is called up

DBG11B quick menu

The DBG11B keypad has a detailed parameter menu with all parameters and a quick menu with the most frequently used parameters. You can switch between the two menus in any operating state using P800 ("Short menu"). The quick menu is displayed as the default setting. The quick menu is shown in the display with a "/" after the parameter number. In the parameter list, the parameters of the quick menu are indicated by a "/".



02408AEN

Figure 40: DBG11B quick menu

IPOS$^{plus®}$

MOVITOOLS® is required to program IPOS$^{plus®}$. The DBG11B keypad only allows you to edit and change IPOS$^{plus®}$ parameters (P9__).

The IPOS$^{plus®}$ program is also stored in the DBG11B keypad when it is saved and is consequently also transferred to another MOVIDRIVE® unit when the parameter set is copied.

Parameter P931 can be used to start and stop the IPOS$^{plus®}$ program from the DBG11B keypad.

Information messages

Information messages on the DBG11B (ca. 2 s long) or in MOVITOOLS/SHELL (message that can be acknowledged):

No.	Text in DBG11B/SHELL	Description
1	ILLEGAL INDEX	Index addressed via interface not available.
2	NOT IMPLEMENT.	• Attempt to execute a function that is not implemented. • An incorrect communication service has been selected. • Manual operation selected via invalid interface (e.g. fieldbus).
3	READ ONLY VALUE	You tried to change a read only value.
4	PARAM. INHIBITED	Parameter lock P803 = "ON", Parameter cannot be altered.
5	SETUP ACTIVE	You tried to change parameters when factory setting is active.
6	VALUE TOO HIGH	You tried to enter a value that is too high.
7	VALUE TOO LOW	You tried to enter a value that is too low.
8	REQ. CARD MISSING	The option card required for the selected function is missing.
--		
--		
11	ONLY TERMINAL	Manual mode must be exited via TERMINAL (DBG11B or USS21A).
12	NO ACCESS	Access to selected parameter denied.
13	CTRL. INHIBIT MISSING	Set terminal DIØØ "/Controller inhibit" = "0" for the selected function.
14	INVALID VALUE	You tried to enter an invalid value.
--		
16	PARAM. NOT LOCKED	Overflow of EEPROM buffer, e.g. through cyclic write access. Parameter not stored in non-volatile EEPROM.
17	INVERTER ENABLED	• Parameter to be changed can only be set in the state "CONTROLLER INHIBIT." • You tried to change to manual mode during live operation.

7 Service

7.1 Fault information

Fault memory

The error memory (P080) stores the last five error messages (errors t-0 to t-4). The error message of longest standing is deleted whenever more than five error messages have occurred. When the fault occurs, the following information is saved: fault that occurred • status of binary inputs/outputs • operating status of the inverter • inverter status • heat sink temperature • speed • output current • active current • unit utilization • DC link voltage • ON hours • enable hours • parameter set • motor utilization.

Switch-off responses

There are three switch-off responses depending on the fault; the inverter remains inhibited in fault status:

Immediate stop

The unit can no longer brake the drive; the output stage goes to high resistance in the event of a fault and the brake is applied immediately (DBØØ "/Brake" = "0").

Rapid stop

The drive is braked with the stop ramp t13/t23. Once the stop speed is reached (→ P300/P310), the brake is applied (DBØØ "/Brake" = "0"). The output stage goes to high resistance after the brake reaction time has elapsed (P732 / P735).

Emergency stop

The drive is braked with the emergency ramp t14/t24. Once the stop speed is reached (→ P300/P310), the brake is applied (DBØØ "/Brake" = "0"). The output stage goes to high resistance after the brake reaction time has elapsed (P732 / P735).

Reset

An error message can be acknowledged by:

- Switching the power supply off and on again.

  Recommendation: Observe a minimum switch-off time of 10 s for the supply system contactor K11.
- Reset via input terminals, i.e. via an appropriately assigned binary input.
- Manual reset in SHELL (P840 = "YES" or [Parameter] / [Manual reset]).
- Manual reset using the DBG11B (pressing the <E> key in the event of a fault gives direct access to parameter P840).

⚠ DANGER!

Risk of crushing if the motor starts up automatically after an auto reset.

Severe or fatal injuries.

- Do not use auto reset with drives where an automatic restart represents a danger to people or units.
- Perform a manual reset.

Inverter is waiting for data

If the inverter is controlled via a communication interface (fieldbus, RS485 or SBus) and the power was switched off and back on again or a fault reset was performed, then the enable remains ineffective until the inverter once again receives valid data via the interface, which is monitored with a timeout.

7.2 Fault list

A dot in the "P" column indicates that the response is programmable (P83_ Fault response). The factory set error response appears in the "Response" column.

Fault code	Designation	Response	P	Possible cause	Measure
00	No error	-			
01	Overcurrent	Immediate shut-off		• Short circuit output • Motor too large • Faulty output stage	• Rectify the short circuit • Connect a smaller motor • Contact SEW Service for advice if the output stage is defective.
03	ground fault	Immediate shut-off		ground fault • in the incoming cable • in the inverter • in the motor	• Eliminate ground fault • Consult SEW Service
04	Brake chopper	Immediate switch-off		• Too much regenerative power • Braking resistor circuit interrupted • Short circuit in the braking resistor circuit • Brake resistor has too high resistance • Brake chopper is defective • possibly also ground fault	• Extend deceleration ramps • Check supply cable to braking resistor • Check technical data of braking resistor • Replace MOVIDRIVE® if the brake chopper is defective • Check for ground fault.
07	DC link overvoltage	Immediate switch-off		• DC link voltage too high • possibly also ground fault	• Extend deceleration ramps • Check supply cable to the braking resistor • Check technical data of braking resistor • Check for ground fault.
08	n-monitoring	Immediate switch-off		• Speed controller or current controller (in VFC operating mode without encoder) operating at setting limit due to mechanical overload or phase failure in the power supply or motor. • Encoder not connected correctly or incorrect direction of rotation. • n_{max} is exceeded during torque control.	• Reduce load • Increase deceleration time setting (P501 or P503). • Check encoder connection, possibly swap over A/A and B/B in pairs • Check encoder voltage supply • Check current limitation • Extend ramps if necessary • Check motor cable and motor • Check mains phases
09	Startup	Immediate switch-off		Inverter has not been taken into operation for the selected operating mode.	Perform startup for the required operating mode.
10	IPOS-ILLOP	Emergency stop		• Incorrect command detected during execution of the IPOS$^{plus®}$ program. • Incorrect conditions during command execution. • Function does not exist in inverter.	• Check the content of the program memory and, if necessary, correct • Load the correct program into the program memory • Check program sequence (→ IPOS manual). • Use another function
11	Excessive temperature	Emergency stop		Thermal overload of inverter	Reduce load and/or ensure adequate cooling.
12	Resolver 14 bit	Emergency stop		14-bit resolver evaluation is active and the actual speed is > 3600 1/min	Set *P302 Maximum speed 1* to max. 3600 1/min
13	Control signal source	Immediate switch-off		Control signal source not defined or defined incorrectly.	Set correct control signal source (P101).
14	Encoder	Immediate switch-off		• Encoder cable or shield not connected correctly • Short circuit/broken encoder wire • Encoder defective	Check encoder cable and shield for correct connection, short circuit and broken wire.
15	24 V internal	Immediate switch-off		No internal DC 24 V supply voltage.	Check power supply connection. Consult SEW service if the error occurs again.
17-24	System error	Immediate switch-off		Malfunction of inverter electronics, possibly due to EMC influence.	Check ground connections and shielding and correct, if necessary. Contact SEW service if this error occurs again.
25	EEPROM	Rapid stop		Error while accessing EEPROM	Activate factory settings, perform reset and reset parameters. Contact SEW service if the error occurs again.
26	External terminal	Emergency stop	•	Read in external error signal via programmable input.	Eliminate specific cause of error; reprogram terminal if necessary.
27	No limit switches	Emergency stop		• Open circuit/both limit switches missing. • Limit switches are swapped over in relation to direction of rotation of motor	• Check wiring of limit switches • Swap limit switch connections • Reprogram terminals

Fault code	Designation	Response	P	Possible cause	Measure
28	Fieldbus Timeout	Rapid stop	•	No communication between master and slave within the projected response monitoring.	• Check communications routine of the master • Extend fieldbus timeout time (P819)/deactivate monitoring
29	Limit switch contacted	Emergency stop		Limit switch was reached in IPOS operating mode.	• Check travel range • Correct operator program
30	Emergency stop Timeout	Immediate switch-off		• Drive overloaded • Emergency stop ramp too short.	• Check project planning • Extend emergency stop ramp
31	TF trip	No Response	•	• Motor too hot, TF sensor has tripped • TF sensor of motor not connected or connected incorrectly • Connection of MOVIDRIVE® and TF on motor interrupted	• Let motor cool off and reset error • Check connections/link between MOVIDRIVE® and TF • Set P835 to "No response"
32	IPOS Index overflow	Emergency stop		Programming principles violated leading to internal system stack overflow	Check IPOS user program and correct if necessary (→ IPOS manual)
33	Setpoint source	Immediate switch-off		Setpoint source not defined or defined incorrectly	Set correct setpoint source (P100)
35	Operating mode	Immediate switch-off		Operating mode not defined or defined incorrectly	Use P700 or P701 to set correct operating mode
37	System watchdog	Immediate switch-off		Error during execution of system software	Contact SEW Service.
38	System software	Immediate switch-off		System error	Contact SEW Service.
39	Reference travel	Immediate switch-off		• The reference cam is missing or does not switch • Limit switches are connected incorrectly • Reference travel type was changed during reference travel	• Check reference cam • Check limit switch connection • Check reference travel type setting and required parameters.
41	IPOS watch-dog option	Immediate switch-off		• Error in communication between system software and option software • Watchdog in the IPOS program. • An application module has been loaded in a MOVIDRIVE® unit without the application version. • The wrong technology function has been set if an application module is used.	• Consult SEW Service • Check IPOS$^{plus®}$ program • Check whether the unit has been activated for the application version (P079) • Check the selected technology function (P078)
42	Lag error	Immediate switch-off	•	• Encoder connected incorrectly • Acceleration ramps too short • P component of positioning controller too small • Incorrectly set speed controller parameters • Value of lag fault tolerance too small	• Check encoder connection • Extend ramps • Set P component to higher value • Reset speed controller parameters • Increase lag fault tolerance • Check wiring of encoder, motor and mains phase. • Check whether mechanical system components can move freely or if they are blocked
43	RS485 timeout	Rapid stop	•	Connection between inverter and PC interrupted.	Check connection between inverter and PC. Contact SEW Service if necessary.
44	Unit utilization	Immediate switch-off		Unit utilization (IxT value) exceeds 125 %	• Decrease power output • Extend ramps • If suggested actions not possible, use larger inverter
45	Initialization	Immediate switch-off		• No parameters set for EEPROM in power section, or parameters set incorrectly.	• Restore factory settings Consult SEW Service if the fault still cannot be reset
47	System bus timeout	Rapid stop	•	Error during communication via system bus.	Check system bus connection.
77	IPOS control word	No Response		**In IPOS operating mode only:** • An attempt was made to set an invalid automatic mode (via external controller). • P916 set incorrectly.	• Check serial connection to external controller • Check write values of external controller • Set correct value for P916
78	IPOS SW limit switch	No Response		**In IPOS operating mode only:** Programmed target position is outside travel range delimited by software limit switches.	• Check the user program • Check position of software limit switches

Fault code	Designation	Response	P	Possible cause	Measure
81	Start condition	Immediate switch-off		**Only in "VFC hoist" operating mode:** The motor could not be supplied with the correct amount of current during the pre-magnetizing time: • Rated motor power too small in relation to rated inverter power. • Motor cable cross section too small.	• Check startup data and perform new startup, if necessary. • Check connection between inverter and motor • Check cross section of motor cable and increase if necessary
82	Open output	Immediate switch-off		**Only in "VFC hoist" operating mode:** • Two or all output phases interrupted. • Rated motor power too small in relation to rated inverter power.	• Check connection between inverter and motor • Check startup data and perform new startup, if necessary.
84	Motor protection	Emergency stop	•	Motor utilization too high.	• Reduce load • Extend ramps • Observe longer pause times
85	Copy	Immediate switch-off		Error while copying parameters.	Check connection between inverter and PC
87	Technology function	Immediate switch-off		Attempt made to load the parameter set for an application version unit with the technology function activated into a standard version unit.	Activate the factory settings (P802 = YES) and reset the unit
88	Flying start	Immediate switch-off		**Only in VFC n-CTRL operating mode:** Actual speed > 5000 1/min when inverter enabled.	Inverter not enabled before actual speed is ≤ 5000 1/min.
94	EEPROM checksum	Immediate switch-off		Inverter electronics disrupted, possibly due to effect of EMC or a defect.	Send unit in for repair
99	IPOS ramp calculation error	Immediate switch-off		**In IPOS operating mode only:** Positioning ramp is sinusoidal or square and an attempt is made to change ramp times and traveling velocities with enabled inverter.	Rewrite the IPOS$^{plus®}$ program so that ramp times and traveling velocities can only be altered when the inverter is inhibited.

7.3 SEW Electronics Service

Send in for repair

Please contact the **SEW-EURODRIVE electronics service if a fault cannot be rectified** (→ "Customer and spare parts service").

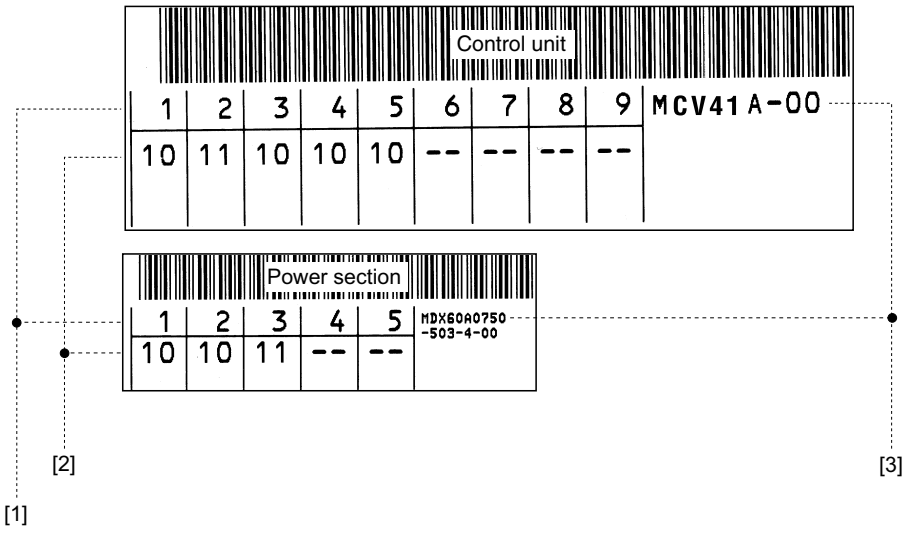
When contacting SEW electronics service, always quote the digits on the status label so that our service personnel can assist you more effectively.

Please provide the following information when sending the unit in for repair:

- Serial number (→ nameplate)
- Unit designation
- Standard version or application version
- Digits on the status label
- Short description of application (drive application, control via terminals or serial)
- Connected motor (motor type, motor voltage, ⅄ or Δ connection)
- Nature of the error
- Accompanying circumstances
- Your own presumptions as to what has happened
- Any unusual events preceding the problem, etc.

Status label

The MOVIDRIVE® units have a status label for the power section and one for the control unit. They are attached to the side of the unit next to the nameplate.



60494AEN

[1] Component / part

[2] Status

[3] Unit designation

7.4 Extended storage

If the unit is being stored for a long time, connect it to the mains voltage for at least 5 minutes every 2 years. Otherwise, the unit's service life may be reduced.

Procedure when maintenance has been neglected:

Electrolytic capacitors are used in the inverters. They are subject to aging effects when deenergized. This effect can damage the capacitors if the unit is connected using the rated voltage after a longer period of storage.

If you have not performed maintenance regularly, SEW-EURODRIVE recommends that you increase the supply voltage slowly up to the maximum voltage. This can be done, for example, by using a variable transformer for which the output voltage has been set according to the following overview. We recommend that you increase the voltage from 0 V to the first stage after a few seconds.

The following stages are recommended:

AC 400/500 V units:

- Stage 1: AC 350 V for 15 minutes
- Stage 2: AC 420 V for 15 minutes
- Stage 3: AC 500 V for 1 hour

AC 230 V units:

- Stage 1: AC 170 V for 15 minutes
- Stage 2: AC 200 V for 15 minutes
- Stage 3: AC 240 V for 1 hour

After you have completed the regeneration process, the unit can be used immediately or stored again for an extended period with maintenance.

7.5 Waste disposal

Please follow the current instructions. Dispose of the following materials in accordance with the regulations in force:

- Electronics scrap (circuit boards)
- Plastic (housing)
- Sheet metal
- Copper

8 Technical Data

8.1 CE marking, UL approval and C-Tick

CE marking

- Low voltage directive

  MOVIDRIVE® *compact* drive inverters comply with the regulations of the Low Voltage Directive 73/23/EEC.

- Electromagnetic compatibility (EMC)

  MOVIDRIVE® *compact* drive inverters are designed for use as components for installation in machines and systems. They comply with the EMC product standard EN 61800-3 "Variable-speed electrical drives." Provided the installation instructions are complied with, they satisfy the appropriate requirements for CE marking of the entire machine/system in which they are installed, on the basis of the EMC Directive 89/336/EEC.

  MOVIDRIVE® *compact* drive inverters size 1 and 2 are equipped with a line filter as standard. These units comply with limit class A to EN 55011 and EN 55014 on the line side without further measures.

CE

The CE mark on the nameplate indicates conformity with the Low Voltage Directive 73/23/EEC and the EMC Directive 89/336/EEC. We can provide a copy of the declaration of conformity on request.

UL / cUL / GOST-R

UL, cUL approval (USA) and the GOST-R certificate (Russia) have been approved for the MOVIDRIVE® *compact* unit series. cUL is equivalent to CSA approval.

C-Tick

C-Tick approval has been granted for the entire MOVIDRIVE® *compact* unit series. C-Tick certifies conformity with ACA (Australian Communications Authority) standards.

8.2 General technical data

The following table lists the technical data applicable to all MOVIDRIVE® *compact* drive inverters, regardless of their type, version, size and power rating.

MOVIDRIVE® *compact*	**All sizes**
Interference immunity	Fulfills EN 61800-3
Interference emission with EMC-compliant installation	Sizes 1 to 5: • Comply with EN 61800-3 • According to class B limit to EN 55011 and EN 55014 Sizes 1 and 2: • Comply with class A limit to EN 55011 and EN 55014 on the line side without further measures
Ambient temperature ϑ_U **Derating ambient temperature** **Climate class**	0 °C...+50 °C when I_D = 100 % I_N and f_{PWM} = 4 kHz 0 °C...+40 °C when I_D = 125 % I_N and f_{PWM} = 4 kHz 0 °C...+40 °C when I_D = 100 % I_N and f_{PWM} = 8 kHz Derating: • 2.5 % I_N per K between 40 °C - 50 °C • 3.5 % I_N per K between 50 °C - 60 °C EN 60721-3-3, class 3K3
Storage temperature[1] ϑ_L	–25 °C...+70 °C (EN 60721-3-3, class 3K3) DBG keypad: –20 °C...+60 °C
Cooling type (DIN 51751)	Forced cooling Temperature-controlled fan, response threshold at ϑ = 45°C
Enclosure EN 60529 (NEMA 1) **Sizes 1 to 3** **Sizes 4 and 5**	IP20 IP00 (power connections); IP10 with mounted Plexiglas cover supplied as standard
Operating mode	Continuous operation with 50 % overload capacity
Overvoltage category	III according to IEC 60664-1 (VDE 0110-1)
Pollution class	2 according to IEC 60664-1 (VDE 0110-1)
Installation altitude	Up to h ≤ 1000 m without restrictions. At h ≥ 1,000 m and above the following restrictions apply: • From 1000 m to max. 4,000 m: – I_N reduction by 1% per 100 m (330 ft) • From 2,000 m to max. 4,000 m: – AC 230 V units: V_N reduction by AC 3 V per 100 m – AC 500 V units: V_N reduction by AC 6 V per 100 m Over 2,000 m only overvoltage class 2; external measures required for overvoltage class 3. Overvoltage classes according to DIN VDE 0110-1.

1) In case of long-term storage, the unit must be connected to the mains voltage for at least 5 minutes every two years, otherwise the unit's service life may be reduced.

8.3 MOVIDRIVE® compact MCF/MCV/MCS4_A...-5_3 (AC 400/500 V units)

Size 1

02570AXX

MOVIDRIVE® *compact*		0015-5A3-4-0_	0022-5A3-4-0_	0030-5A3-4-0_	0040-5A3-4-0_
INPUT					
Supply voltage	V_{mains}	3 × AC 380 V –10 % ... 3 × AC 500 V +10%

8.5 MOVIDRIVE® compact MCF/MCV/MCS electronics data

MOVIDRIVE® *compact*		**Setpoint processing and speed ramps**	
MCF/MCV/MCS40A and MCV/MCS41A		**Version with analog setpoint input**	
Voltage supply for setpoint input	X10:1 X10:3	REF1: DC+10 V +5 % / –0 %, I_{max} = DC 3 mA REF2: DC–10 V +0 % / –5 %, I_{max} = DC 3 mA	Reference voltages for setpoint potentiometer
Setpoint input n1	X10:2/X10:4	AI11/AI12: Voltage or current input, can be set with S11 and P11_, sampling interval 1 ms	
(Differential input) Operating mode AI11/AI12 Resolution Internal resistance		Voltage input: n1 = DC (0...+10 V) or DC (–10 V...0...+10 V) 12 bit R_i = 40 kΩ (external voltage supply) R_i = 20 kΩ (supply from REF1/REF2)	Current input: n1 = DC (0...20 mA) or DC (4...20 mA) 11 bit R_i = 250 Ω
MCF/MCV/MCS41A (X10:2 and X10:4 inactive for MCF41A)		**Version with PROFIBUS-DP interface. No analog setpoint input n1 (AI11/AI12) available for MCF41A; setpoint selection only via PROFIBUS-DP interface.**	
Protocol option Baud rate Connection technology Bus terminator Station address Name of the GSD file DP ident. number		PROFIBUS DP to IEC 61158 Automatic baud rate detection from 9.6 kbaud to 12 MBaud 9-pole sub D connector, pin assignment to IEC 61158 Can be activated for cable type A to IEC 61158 0 ... 125, adjustable via DIP switches SEW_6002.GSD 6002_{hex} (24578_{dec})	
Valid for all versions			
Setpoint input n2 TF/TH input Resolution	X10:6	Analog input DC (0 ... 10 V) or optionally (→ P120) TF/TH input with response threshold at $R_{TF} \geq 2.9$ kΩ ± 10 % 10 Bit	
Internal setpoints		Parameter set 1: n11/n12/n13 = –5000...0...+5000 min^{-1} Parameter set 2: n21/n22/n23 = –5000...0...+5000 min^{-1}	
Time ranges of the speed ramps at Δn = 3000 min^{-1}		1st Ramp t11/t21 Up: 0.0...2000 s Down: 0.0...2000 s 2nd Ramp t12/t22 Up = down: 0.0...2000 s Stop ramp t13/t23 Down: 0...20 s Emergency ramp t14/t24 Down: 0...20 s Motor potentiometer t3 Up: 0.2...50 s Down: 0.2...50 s	

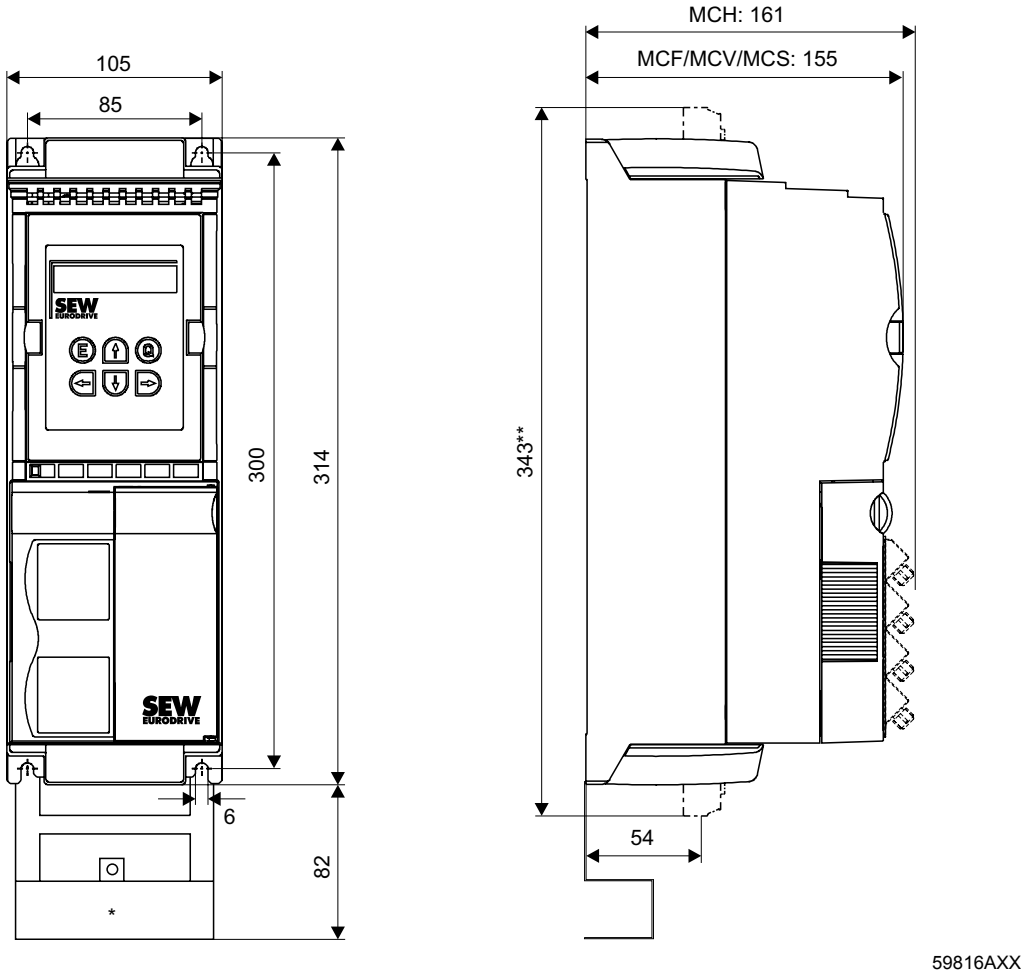
MOVIDRIVE® *compact*		Additional electronics data	
Auxiliary voltage output[1]	X10:16	VO24: V_{OUT} = DC 24 V, maximum current carrying capacity I_{max} = DC 200 mA	
Ext. voltage supply[1]	X10:24	VI24: V_{IN} = DC 24 V –15 % / +20 % according to EN 61131-2	
Binary inputs Internal resistance	X10:9...X10:14	DIØØ...DIØ5: Isolated (optocoupler), PLC compatible (EN 61131), sampling interval 5 ms $R_i \approx 3\ k\Omega$, $I_E \approx 10$ mA	
Signal level		DC (+13 V...+30 V) = "1" = Contact closed DC (–3 V...+5 V) = "0" = Contact open	Fulfills EN 61131
Function	X10:9 X10:10...X10:14	DIØØ: fixed assignment with "/Controller inhibit" DIØ1...DIØ5: Selection option → Parameter menu P60_	
Binary outputs[1]	X10:21/X10:19	DBØØ/DOØ2: PLC-compatible (EN 61131-2), response time 5 ms	
Signal level		"0" = 0 V "1" = +24 V **Important:** Do not apply external voltage!	
Function	X10:21 X10:19	DBØØ: With fixed assignment "/Brake", I_{max} = DC 150 mA (short-circuit proof, protected against external voltage up to DC 30 V) DOØ2: Selection option → Parameter menu P62_, I_{max} = 50 mA (short-circuit proof and protected against external voltage up to DC 30 V)	
Only for MCF/MCV/MCS40A Analog output	X10:19	AOØ1: → Menu P64_, resolution 8 bit, I_{max} = DC 20 mA (short-circuit proof)	
Relay output	X10:18/20/22	DOØ1: Load capacity of the relay contacts U_{max} = DC 30 V, I_{max} = DC 800 mA	
Function	X10:18 X10:20 X10:22	DOØ1-C: Shared relay contact DOØ1-NO: Normally open contact DOØ1-NC: Normally closed contact	Selection option → Parameter menu P62_
System bus (SBus)	X10:5 X10:7	SC11: SBus high SC12: SBus low	CAN bus according to CAN specification 2.0, parts A and B, transmission technology according to ISO 11898, max. 64 stations, terminating resistor (120Ω) can be activated using DIP switch.
Input motor encoder [1] Not for MCF4_A	X15:	Incremental encoder for MCV4_A Permitted encoder types: • sin/cos encoder AC 1 V_{SS} • DC 5 V TTL sensor • DC 24 V HTL sensor Encoder power supply: DC+24 V, I_{max} = DC 180 mA	Resolver for MCS4_A 2-pole, AC 7 V_{eff}, 7 kHz
Output for incremental encoder simulation or external encoder input[1] Not for MCF4_A	X14:	Output for incremental encoder simulation: Signal level to RS422 Number of pulses as for X15: (MCV4_A) or fixed 1024 pulses/revolution (MCS4_A)	External encoder input (max. 200 kHz): Only connect encoders with signal level to RS422. Encoder power supply: DC+24 V, I_{max} = DC180 mA
Reference terminals	X10:8 X10:17/X10:23 X10:15	AGND: Reference potential for analog signals n1 and n2 and terminals X10:1 and X10:3. DGND: Reference potential for binary signals, system bus (SBus), encoder and resolver. DCOM: Reference potential for binary inputs X10:9...X10:14 (DIØØ...DIØ5).	
Permitted cable cross section		One core per terminal: 0.20...2.5 mm^2 (AWG 24...12) Two cores per terminal: 0.20...1 mm^2 (AWG 24...17)	

1) **MCF/MCV/MCS40A (without fieldbus):** The unit provides a current of I_{max} = DC 400 mA for the DC+24 V outputs (VO24, DBØØ, DOØ2, encoder supply). If this value is insufficient, a DC 24 V voltage supply must be connected to X10:24 (VI24). This external DC 24 V voltage supply must be able to provide 50 W continuous power and 100 W peak power (1 s).

MCF/MCV/MCS41A (with PROFIBUS-DP): SEW-EURODRIVE recommends that you always supply these units with DC 24 V at terminal X10:24 (VI24). This external DC 24 V voltage supply must be able to provide 50 W continuous power and 100 W peak power (1 s).
The DC 24 V outputs X10:16 (VO24), X10:21 (DBØØ) and X10:19 (DOØ2) may be supplied with a total maximum current of I_{max} = DC 400 mA.

8.6 MOVIDRIVE® compact dimension drawings

Size 1 (0015 ... 0040-5A3 and 0015 ... 0037-2A3)



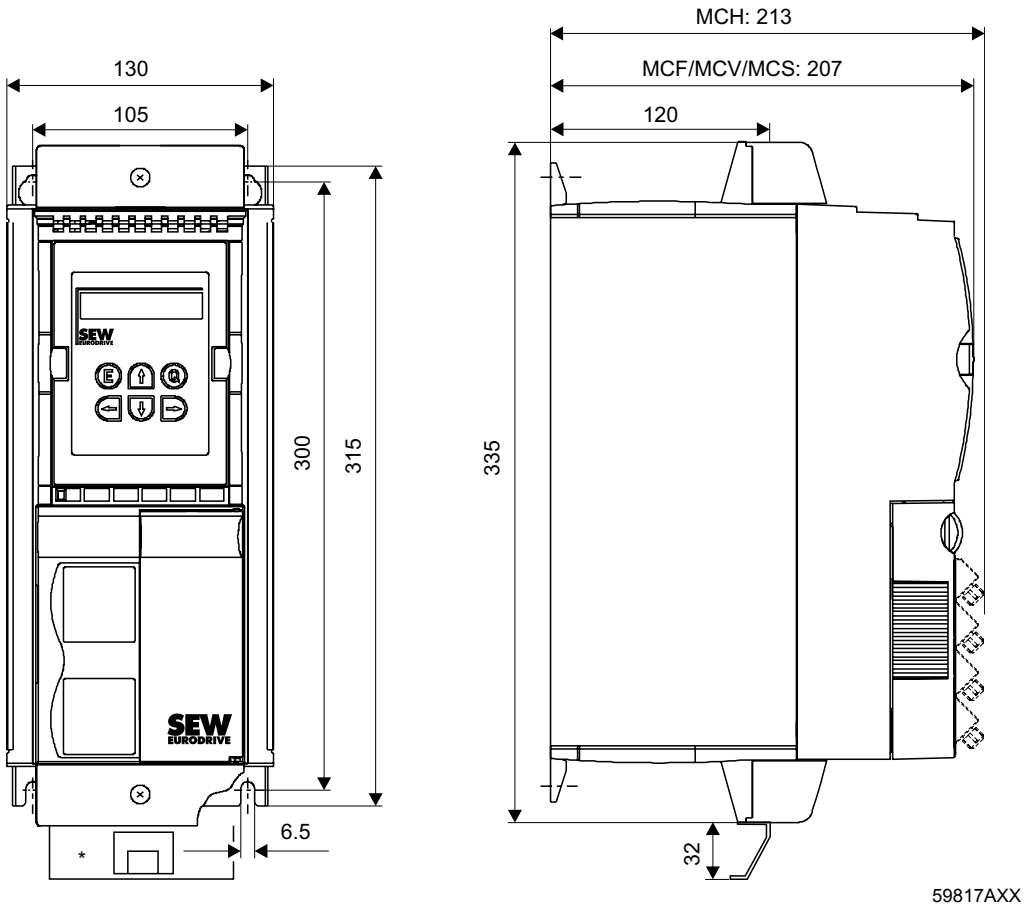
All dimensions in mm

* Power shield clamp

** Unit dimensions including connected power terminals

	NOTE
	Leave at least 100 mm clearance above and below the unit to ensure optimum cooling. There is no need for clearance at the sides. You can line up the units directly next to one another.

Size 2 (0055 ... 0110-5A3 and 0055 / 0075-2A3)

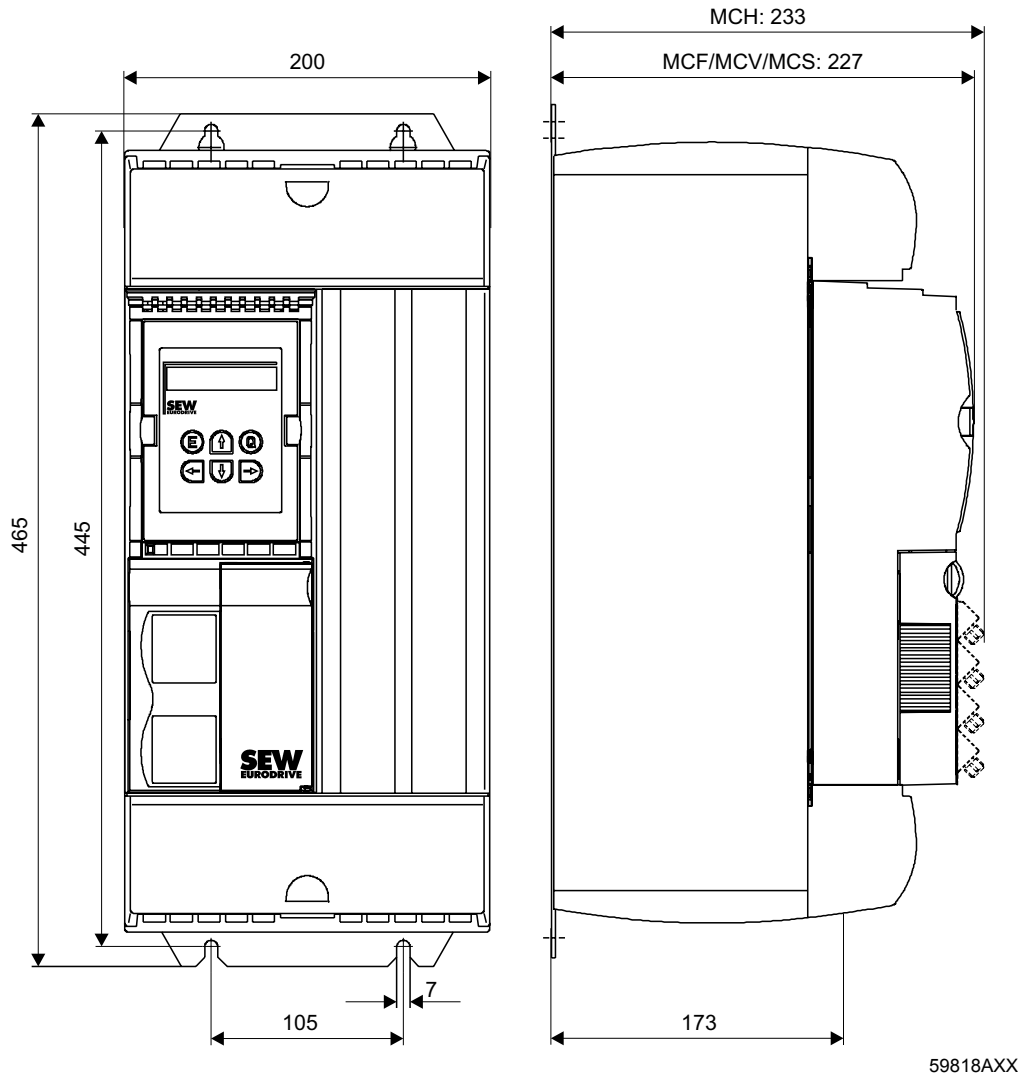


All dimensions in mm

* Power shield clamp

	NOTE
	Leave at least 100 mm clearance above and below the unit to ensure optimum cooling. There is no need for clearance at the sides. You can line up the units directly next to one another.

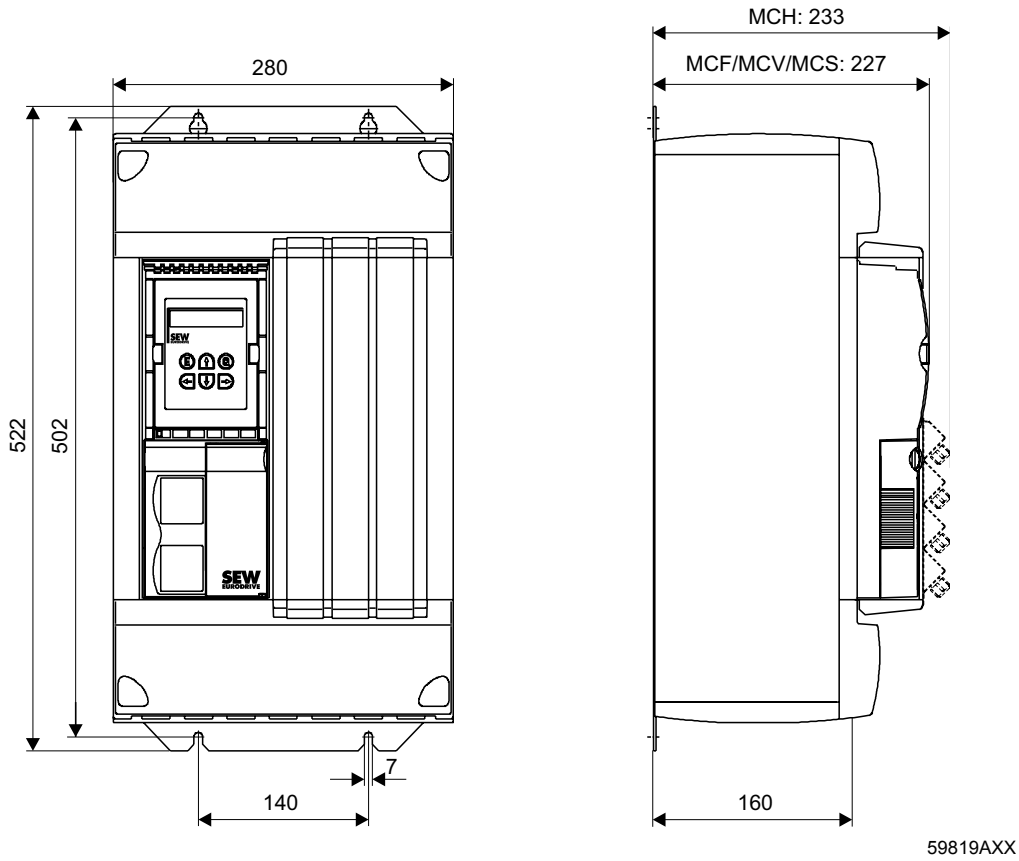
Size 3 (0150 ... 0300-503 and 0110 / 0150-203)



All dimensions in mm

	NOTE
	Leave at least 100 mm clearance above and below the unit to ensure optimum cooling. There is no need for clearance at the sides. You can line up the units directly next to one another.

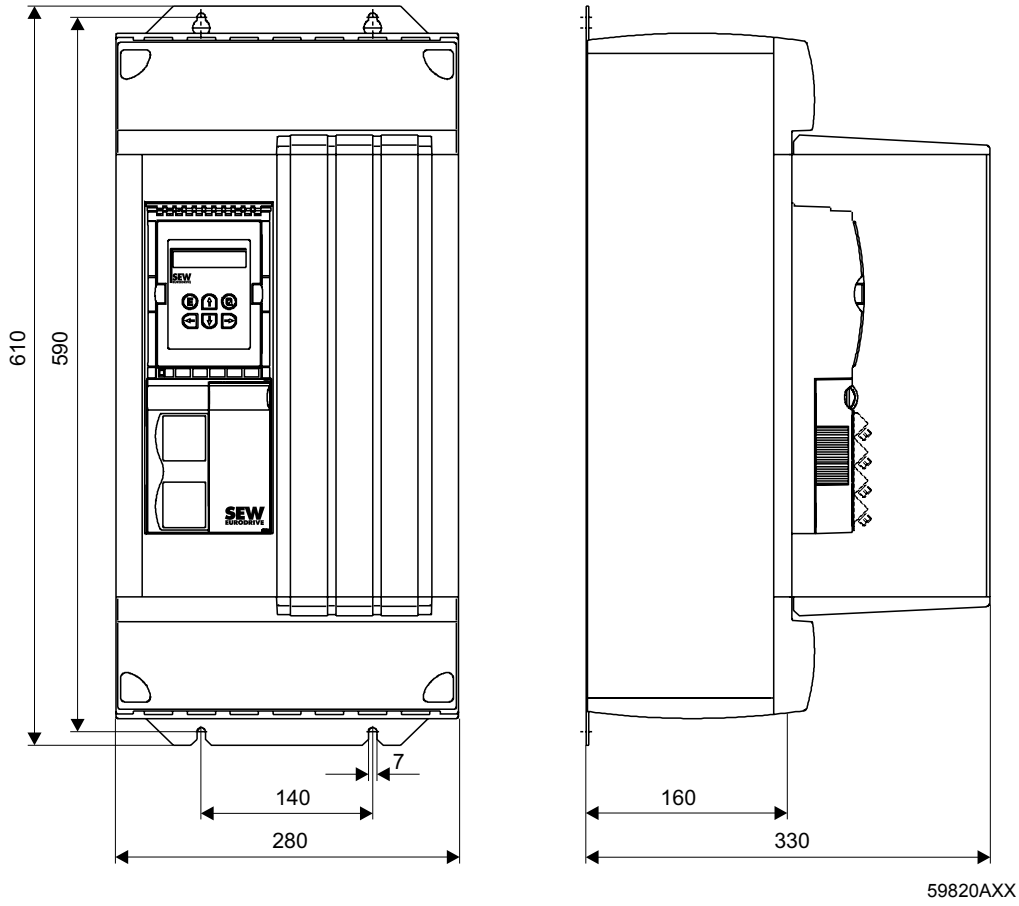
Size 4 (0370 / 0450-503 and 0220 / 0300-203)



All dimensions in mm

	NOTE
	Leave at least 100 mm clearance above and below the unit to ensure optimum cooling. There is no need for clearance at the sides. You can line up the units directly next to one another.

Size 5 (0550 / 0750-503)



All dimensions in mm

	NOTE
	Provide at least 100 mm clearance above and below the unit. There is no need for clearance at the sides. You can line up the units directly next to one another. Do not install any components that are sensitive to high temperatures within 300 mm of the top of the unit, for example contactors or fuses.

How we're driving the world

With people who think fast and develop the future with you.

With a worldwide service network that is always close at hand.

With drives and controls that automatically improve your productivity.

With comprehensive knowledge in virtually every branch of industry today.

With uncompromising quality that reduces the cost and complexity of daily operations.

SEW-EURODRIVE
Driving the world

With a global presence that offers responsive and reliable solutions. Anywhere.

With innovative technology that solves tomorrow's problems today.

With online information and software updates, via the Internet, available around the clock.
